Microsemi makes no warranty, representation, or guarantee regarding the information contained herein or the suitability of its products and services for any particular purpose, nor does Microsemi assume any liability whatsoever arising out of the application or use of any product or circuit. The products sold hereunder and any other products sold by Microsemi have been subject to limited testing and should not be used in conjunction with mission-critical equipment or applications. Any performance specifications are believed to be reliable but are not verified, and Buyer must conduct and complete all performance and other testing of the products, alone and together with, or installed in, any end-products. Buyer shall not rely on any data and performance specifications or parameters provided by Microsemi. It is the Buyer’s responsibility to independently determine suitability of any products and to test and verify the same. The information provided by Microsemi hereunder is provided “as is, where is” and with all faults, and the entire risk associated with such information is entirely with the Buyer. Microsemi does not grant, explicitly or implicitly, to any party any patent rights, licenses, or any other IP rights, whether with regard to such information itself or anything described by such information.

Information provided in this document is proprietary to Microsemi, and Microsemi reserves the right to make any changes to the information in this document or to any products and services at any time without notice.

About Microsemi
Microsemi Corporation (NASDAQ: MSCC) offers a comprehensive portfolio of semiconductor and system solutions for aerospace & defense, communications, data center and industrial markets. Products include high-performance and radiation-hardened analog mixed-signal integrated circuits, FPGAs, SoCs and ASICs; power management products; timing and synchronization devices and precise time solutions, setting the world's standard for time; voice processing devices; RF solutions; discrete components; enterprise storage and communication solutions; security technologies and scalable anti-tamper products; Ethernet solutions; Power-over-Ethernet ICs and midspans; as well as custom design capabilities and services. Microsemi is headquartered in Aliso Viejo, California, and has approximately 4,800 employees globally. Learn more at www.microsemi.com.

Example Tcl Script to Create an Adaptive FIR Filter Design.....................262
Introduction to Tcl Scripting

Tcl, the Tool Command Language, pronounced *tickle*, is an easy-to-learn scripting language that is compatible with Libero SoC software. You can run scripts from either the Windows or Linux command line or store and run a series of commands in a *.tcl* batch file.

This section provides a quick overview of the main features of Tcl:

- **Basic syntax**
- **Types of Tcl commands**
- **Variables**
- **Command substitution**
- **Quotes and braces**
- **Lists and arrays**
- **Control structures**
- **Print statement and Return values**
- **Running Tcl scripts from the command line**
- **Exporting Tcl scripts**
- **Project Manager Tcl Commands**

For complete information on Tcl scripting, refer to one of the books available on this subject. You can also find information about Tcl at web sites such as [http://www.tcl.tk](http://www.tcl.tk).

Libero SoC provides additional capabilities and built-in Tcl Commands:

- **Running Tcl scripts from the command line**
- **Exporting Tcl scripts**
- **extended_run_lib**
- **Tcl Commands as specified in this document**

Tcl Commands and Supported Families

This reference guide describes the supported Tcl commands for SmartFusion2, IGLOO2, and RTG4 devices in the Libero SoC v12.0 release.

Tcl Command Documentation Conventions

The following table shows the typographical conventions used for the Tcl command syntax.

<table>
<thead>
<tr>
<th>Syntax Notation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>command - argument</td>
<td>Commands and arguments appear in Courier New typeface.</td>
</tr>
<tr>
<td>variable</td>
<td>Variables appear in blue, italic Courier New typeface. You must substitute an appropriate value for the variable.</td>
</tr>
<tr>
<td>[-argument.value]</td>
<td>Optional arguments begin and end with a square bracket with one exception: if the square bracket is followed by a plus sign (+), then users must specify at least one argument. The plus</td>
</tr>
</tbody>
</table>
Libero SoC Tcl Commands Reference Guide

**Note:** All Tcl commands are case sensitive. However, their arguments are not.

### Syntax Notation

<table>
<thead>
<tr>
<th>Syntax Notation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>sign (+)</td>
<td>indicates that items within the square brackets can be repeated. Do not enter the plus sign character.</td>
</tr>
</tbody>
</table>

**Examples**

Syntax for the `get_clocks` command followed by a sample command:

```
get_clocks variable
```

```
get_clocks clk1
```

Syntax for the `backannotate` command followed by a sample command:

```
backannotate -name file_name -format format_type -language language -dir directory_name [-netlist] [-pin]
```

```
backannotate -dir \{..\design\} -name "fanouttest_ba.sdf" -format "SDF" -language "VERILOG" \-netlist
```

### Wildcard Characters

You can use the following wildcard characters in names used in Tcl commands:

<table>
<thead>
<tr>
<th>Wildcard</th>
<th>What it Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>\</td>
<td>Interprets the next character literally</td>
</tr>
<tr>
<td>?</td>
<td>Matches any single character</td>
</tr>
<tr>
<td>*</td>
<td>Matches any string</td>
</tr>
<tr>
<td>[]</td>
<td>Matches any single character among those listed between brackets (that is, [A-Z] matches any single character in the A-to-Z range)</td>
</tr>
</tbody>
</table>

**Note:** The matching function requires that you add a slash (\) before each slash in the port, instance, or net name when using wildcards in a PDC command. For example, if you have an instance named “A/B12” in the netlist, and you enter that name as “A\B*” in a PDC command, you will not be able to find it. In this case, you must specify the name as A\\B*.

### Special Characters [], { }, and \`

Sometimes square brackets ([ ]) are part of the command syntax. In these cases, you must either enclose the open and closed square brackets characters with curly brackets ({ }) or precede the open and closed square brackets ([ ]) characters with a backslash (\). If you do not, you will get an error message.

For example:

```
pin_assign -port {LFSR_OUT[0]} -pin 15
```

```
or
pin_assign -port LFSR_OUT\{0\} -pin 180
```

**Note:** Tcl commands are case sensitive. However, their arguments are not.
Entering Arguments on Separate Lines

To enter an argument on a separate line, you must enter a backslash (\) character at the end of the preceding line of the command as shown in the following example:

```
backannotate -dir \\n{..\design} -name "fanouttest_ba.sdf" -format "SDF" -language "VERILOG" \\
-netlist
```

Project Manager Tcl Command Reference

A Tcl (Tool Command Language) file contains scripts for simple or complex tasks. You can run scripts from either the Windows or UNIX command line or store and run a series of Tcl commands in a *.tcl batch file. You can also run scripts from within the GUI in Project Manager.

Note: Tcl commands are case sensitive. However, their arguments are not.

The following table lists some of the Tcl scripting commands supported by the Libero SoC Project Manager:

<table>
<thead>
<tr>
<th>Command</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>add_file_to_library</code></td>
<td>Adds a file to a library in your project</td>
</tr>
<tr>
<td><code>add_library</code></td>
<td>Adds a VHDL library to your project</td>
</tr>
<tr>
<td><code>add_probe</code></td>
<td>Adds a probe to an internal net in your design, using the original name from the optimized netlist in your design.</td>
</tr>
<tr>
<td><code>add_modelsim_path</code></td>
<td>Adds a ModelSim simulation library to your project</td>
</tr>
<tr>
<td><code>add_profile</code></td>
<td>Adds a profile; sets the same values as the Add or Edit Profile dialog box</td>
</tr>
<tr>
<td><code>associate_stimulus</code></td>
<td>Associates a stimulus file in your project</td>
</tr>
<tr>
<td><code>change_link_source</code></td>
<td>Changes the source of a linked file in your project</td>
</tr>
<tr>
<td><code>check_hdl</code></td>
<td>Checks the HDL in the specified file</td>
</tr>
<tr>
<td><code>check_schematic</code></td>
<td>Checks the schematic</td>
</tr>
<tr>
<td><code>close_project</code></td>
<td>Closes the current project in Libero SoC</td>
</tr>
<tr>
<td><code>configure_tool</code></td>
<td>Tcl command to set the parameters for any tool called by Libero for the SmartFusion2, IGLOO2, and RTG4 families.</td>
</tr>
<tr>
<td><code>create_links</code></td>
<td>Creates a link (or links) to a file/files in your project</td>
</tr>
<tr>
<td><code>create_symbol</code></td>
<td>Creates a symbol in a module</td>
</tr>
<tr>
<td><code>delete_files</code></td>
<td>Deletes files from your Libero SoC project</td>
</tr>
<tr>
<td><code>download_core</code></td>
<td>Downloads a core and adds it to your repository</td>
</tr>
<tr>
<td><code>edit_profile</code></td>
<td>Edits a profile; sets the same values as the Add or Edit Profile dialog box</td>
</tr>
<tr>
<td>Command</td>
<td>Action</td>
</tr>
<tr>
<td>---------------------</td>
<td>------------------------------------------------------------------------</td>
</tr>
<tr>
<td><code>export_as_link</code></td>
<td>Exports a file to another directory and links to the file</td>
</tr>
<tr>
<td><code>export_ba_files</code></td>
<td>Exports the backannotated files.</td>
</tr>
<tr>
<td><code>export_bitstream_file</code></td>
<td>Configures parameters for your exported bitstream.</td>
</tr>
<tr>
<td><code>export_bsdic_file</code></td>
<td>Exports the BSDL to a specified file.</td>
</tr>
<tr>
<td><code>export_design_summary</code></td>
<td>Exports an HTML file containing information about your root</td>
</tr>
<tr>
<td></td>
<td>SmartDesign in your project.</td>
</tr>
<tr>
<td><code>export_firmware</code></td>
<td>Exports design firmware configuration data.</td>
</tr>
<tr>
<td><code>export_fp_pdc</code></td>
<td>Exports the Floorplanning Physical Design Constraint (*.pdc) File.</td>
</tr>
<tr>
<td><code>export_io_pdc</code></td>
<td>Exports the I/O constraints Physical Design Constraint (*.pdc) File.</td>
</tr>
<tr>
<td><code>export_netlist_file</code></td>
<td>Exports the netlist after the compile state has completed.</td>
</tr>
<tr>
<td><code>export_profiles</code></td>
<td>Exports your tool profiles; performs the same action as the Export</td>
</tr>
<tr>
<td></td>
<td>Profiles dialog box</td>
</tr>
<tr>
<td><code>export_progid_job</code></td>
<td>Exports your programming job.</td>
</tr>
<tr>
<td><code>export_script</code></td>
<td>Explicitly exports the Tcl command equivalents of the current Libero</td>
</tr>
<tr>
<td></td>
<td>session.</td>
</tr>
<tr>
<td><code>export_sdc_file</code></td>
<td>Exports the SDC (Synopsys Design Constraint) file for timing</td>
</tr>
<tr>
<td></td>
<td>constraints.</td>
</tr>
<tr>
<td><code>generate_ba_files</code></td>
<td>Generates the back-annotate files for your design.</td>
</tr>
<tr>
<td><code>generate_hdl_from_schematic</code></td>
<td>Generates an HDL file from your schematic.</td>
</tr>
<tr>
<td><code>generate_hdl_netlist</code></td>
<td>Generates the HDL netlist for your design and runs the design rule check.</td>
</tr>
<tr>
<td><code>import_component_data</code></td>
<td>Imports component data into an existing Libero project.</td>
</tr>
<tr>
<td><code>import_files</code> (Libero SoC)</td>
<td>Imports files into your Libero SoC project</td>
</tr>
<tr>
<td><code>import_vcd</code></td>
<td>Imports a VCD file into your project</td>
</tr>
<tr>
<td><code>new_project</code></td>
<td>Creates a new project in the Libero SoC</td>
</tr>
<tr>
<td><code>open_project</code></td>
<td>Opens an existing Libero SoC project</td>
</tr>
<tr>
<td><code>organize_cdb</code></td>
<td>Organizes the CDB files in your project</td>
</tr>
<tr>
<td><code>organize_constraints</code></td>
<td>Organizes the constraint files in your project</td>
</tr>
<tr>
<td><code>organize_sources</code></td>
<td>Organizes the source files in your project</td>
</tr>
<tr>
<td><code>organize_tool_files</code></td>
<td>Specifies specific constraint files to be passed to and used by a Libero tool.</td>
</tr>
<tr>
<td>Command</td>
<td>Action</td>
</tr>
<tr>
<td>----------------------------------</td>
<td>------------------------------------------------------------------------</td>
</tr>
<tr>
<td>project_settings</td>
<td>Modifies project flow settings for your Libero SoC project</td>
</tr>
<tr>
<td>read_active_probe</td>
<td>Reads active probe values from the device.</td>
</tr>
<tr>
<td>refresh</td>
<td>Refreshes your project, updates the view and checks for updated links and files.</td>
</tr>
<tr>
<td>remove_core</td>
<td>Removes a core from your project</td>
</tr>
<tr>
<td>remove_library</td>
<td>Removes a VHDL library from your project</td>
</tr>
<tr>
<td>remove_pin_enable_rate</td>
<td>Remove a pin enable rate</td>
</tr>
<tr>
<td>remove_profile</td>
<td>Deletes a tool profile</td>
</tr>
<tr>
<td>rename_library</td>
<td>Renames a VHDL library in your project</td>
</tr>
<tr>
<td>rollback_constraints_from_adb</td>
<td>Opens the ADB file, exports the PDC file, and then replaces it with the specified PDC file</td>
</tr>
<tr>
<td>run_designer</td>
<td>Runs Designer with compile and layout options (if selected)</td>
</tr>
<tr>
<td>run_drc</td>
<td>Runs the design rule check on your netlist and generates an HDL file</td>
</tr>
<tr>
<td>run_simulation</td>
<td>Runs simulation on your project with your default simulation tool and creates a logfile</td>
</tr>
<tr>
<td>run_tool (SmartFusion2, IGLOO2, and RTG4)</td>
<td>Starts the specified tool.</td>
</tr>
<tr>
<td>run_synthesis</td>
<td>Runs synthesis on your project and creates a logfile</td>
</tr>
<tr>
<td>save_log</td>
<td>Saves your Libero SoC log file</td>
</tr>
<tr>
<td>save_project</td>
<td>Saves your project</td>
</tr>
<tr>
<td>save_project_as</td>
<td>Saves your project with a different name</td>
</tr>
<tr>
<td>select_active_probe</td>
<td>Manages the current selection of active probe points to be used by active probe READ operations.</td>
</tr>
<tr>
<td>select_profile</td>
<td>Selects a profile to use in your project</td>
</tr>
<tr>
<td>set_actel_lib_options</td>
<td>Sets your simulation library to default, or to another library</td>
</tr>
<tr>
<td>set_device (Project Manager)</td>
<td>Sets your device family, die, and package in the Project Manager</td>
</tr>
<tr>
<td>set_live_probe</td>
<td>Channels A and/or B to the specified probe point(s).</td>
</tr>
<tr>
<td>set_modelsim_options</td>
<td>Sets your ModelSim simulation options</td>
</tr>
<tr>
<td>set_option</td>
<td>Sets your synthesis options on a module</td>
</tr>
<tr>
<td>set_userlib_options</td>
<td>Sets your user library options during simulation</td>
</tr>
<tr>
<td>Command</td>
<td>Action</td>
</tr>
<tr>
<td>--------------------</td>
<td>------------------------------------------------------------------------</td>
</tr>
<tr>
<td>set_root</td>
<td>Sets the module you specify as the root</td>
</tr>
<tr>
<td>synplify</td>
<td>Runs Synplify in batch mode and executes a Tcl script.</td>
</tr>
<tr>
<td>synplify_pro</td>
<td>Runs Synplify Pro in batch mode and executes a Tcl script.</td>
</tr>
<tr>
<td>unlink</td>
<td>Removes a link to a file in your project</td>
</tr>
<tr>
<td>use_file</td>
<td>Specifies which file in your project to use</td>
</tr>
<tr>
<td>use_source_file</td>
<td>Defines a module for your project</td>
</tr>
<tr>
<td>write_active_probe</td>
<td>Sets the target probe point on the device to the specified value.</td>
</tr>
</tbody>
</table>
Basic Syntax

Tcl scripts contain one or more commands separated by either new lines or semicolons. A Tcl command consists of the name of the command followed by one or more arguments. The format of a Tcl command is:

```
command arg1 ... argN
```

The command in the following example computes the sum of 2 plus 2 and returns the result, 4.

```
expr 2 + 2
```

The `expr` command handles its arguments as an arithmetic expression, computing and returning the result as a string. All Tcl commands return results. If a command has no result to return, it returns an empty string.

To continue a command on another line, enter a backslash (`\`) character at the end of the line. For example, the following Tcl command appears on two lines:

```
import -format "edif" -netlist_naming "Generic" -edif_flavor "GENERIC" {prepi.edn}
```

Comments must be preceded by a hash character (`#`). The comment delimiter (`#`) must be the first character on a line or the first character following a semicolon, which also indicates the start of a new line. To create a multi-line comment, you must put a hash character (`#`) at the beginning of each line.

Note: Be sure that the previous line does not end with a continuation character (`\`). Otherwise, the comment line following it will be ignored.

Special Characters

Square brackets (`[]`) are special characters in Tcl. To use square brackets in names such as port names, you must either enclose the entire port name in curly braces, for example, `pin_assign -port {LFSR_OUT[15]} -iostd lvttl -slew High`, or lead the square brackets with a slash (`\`) character as shown in the following example:

```
pin_assign -port LFSR_OUT\[15\] -iostd lvttl -slew High
```

Sample Tcl Script

```
# Set up a new design
new_design -name "multiclk" -family "Axcelerator" -path .

# Set device, package, speed grade, default I/O standard and
# operating conditions
set_device -die "AX1000" -package "BG729" -speed "-3" -voltage "1.5" -iostd "LVTTL" -temprange "COM" -voltrange "COM"

# Import the netlist
import -format "verilog" {multiclk.v}

# Compile the netlist
compile

# Import a PDC file
import_aux -format "pdc" {multiclk.pdc}

# Run standard layout
layout -incremental "OFF"

# Generate backannotated sdf and netlist file
```
Types of Tcl commands

This section describes the following types of Tcl commands:
- **Built-in commands**
- **Procedures created with the proc command**

### Built-in commands

Built-in commands are provided by the Tcl interpreter. They are available in all Tcl applications. Here are some examples of built-in Tcl commands:

- Tcl provides several commands for manipulating file names, reading and writing file attributes, copying files, deleting files, creating directories, and so on.
- `exec` - run an external program. Its return value is the output (on stdout) from the program, for example:
  ```tcl
  set tmp [ exec myprog ]
  puts stdout $tmp
  ```
- You can easily create collections of values (lists) and manipulate them in a variety of ways.
- You can create arrays - structured values consisting of name-value pairs with arbitrary string values for the names and values.
- You can manipulate the time and date variables.
- You can write scripts that can wait for certain events to occur, such as an elapsed time or the availability of input data on a network socket.

### Procedures created with the proc command

You use the `proc` command to declare a procedure. You can then use the name of the procedure as a Tcl command.

The following sample script consists of a single command named `proc`. The `proc` command takes three arguments:

- The name of a procedure (myproc)
- A list of argument names (arg1 arg2)
- The body of the procedure, which is a Tcl script

```tcl
proc myproc { arg1 arg2 } {
  # procedure body
}
myproc a b
```

### Variables

With Tcl scripting, you can store a value in a variable for later use. You use the `set` command to assign variables.

For example, the following set command creates a variable named `x` and sets its initial value to 10.

```tcl
set x 10
```

A variable can be a letter, a digit, an underscore, or any combination of letters, digits, and underscore characters. All variable values are stored as strings.
In the Tcl language, you do not declare variables or their types. Any variable can hold any value. Use the dollar sign ($) to obtain the value of a variable, for example:

```tcl
set a 1
set b $a
set cmd expr
set x 11
$cmd $x*$x
```

The dollar sign $ tells Tcl to handle the letters and digits following it as a variable name and to substitute the variable name with its value.

**Global Variables**

Variables can be declared global in scope using the Tcl global command. All procedures, including the declaration can access and modify global variables, for example:

```
global myvar
```

**Command substitution**

By using square brackets ([[]]), you can substitute the result of one command as an argument to a subsequent command, as shown in the following example:

```tcl
set a 12
set b [expr $a*4]
```

Tcl handles everything between square brackets as a nested Tcl command. Tcl evaluates the nested command and substitutes its result in place of the bracketed text. In the example above, the argument that appears in square brackets in the second set command is equal to 48 (that is, 12* 4 = 48).

Conceptually,

```tcl
set b [expr $a * 4]
```

expands to

```tcl
set b [expr 12 * 4 ]
```

and then to

```tcl
set b 48
```

**Quotes and braces**

The distinction between braces ({ }) and quotes (" ") is significant when the list contains references to variables. When references are enclosed in quotes, they are substituted with values. However, when references are enclosed in braces, they are not substituted with values.

Example

<table>
<thead>
<tr>
<th></th>
<th>With Braces</th>
<th>With Double Quotes</th>
</tr>
</thead>
<tbody>
<tr>
<td>set b 2</td>
<td>set b 2</td>
<td></td>
</tr>
<tr>
<td>set t { 1 $b 3 }</td>
<td>set t &quot; 1 $b 3 &quot;</td>
<td></td>
</tr>
<tr>
<td>set s { [ expr $b + $b ]}</td>
<td>set s &quot; [ expr $b + $b ]&quot;</td>
<td></td>
</tr>
<tr>
<td>puts stdout $t</td>
<td>puts stdout $t</td>
<td></td>
</tr>
<tr>
<td>puts stdout $s</td>
<td>puts stdout $s</td>
<td></td>
</tr>
</tbody>
</table>
will output
1 $b 3 vs. 1 2 3
[ expr $b + $b ]

Filenames
In Tcl syntax, filenames should be enclosed in braces {} to avoid backslash substitution and white space separation. Backslashes are used to separate folder names in Windows-based filenames. The problem is that sequences of "\n" or "\t" are interpreted specially. Using the braces disables this special interpretation and specifies that the Tcl interpreter handle the enclosed string literally. Alternatively, double-backslash "\\n" and "\\t" would work as well as forward slash directory separators "/n" and "/t". For example, to specify a file on your Windows PC at c:\newfiles\thisfile.adb, use one of the following:

- {C:\newfiles\thisfile.adb}
- C:\\newfiles\\thisfile.adb
- "C:\newfiles\thisfile.adb"
- C:/newfiles/thisfile.adb
- "C:/newfiles/thisfile.adb"

If there is white space in the filename path, you must use either the braces or double-quotes. For example:

C:\program data\thisfile.adb
should be referenced in Tcl script as

- {C:\program data\thisfile.adb} or "C:\\program data\\thisfile.adb"

If you are using variables, you cannot use braces {} because, by default, the braces turn off all special interpretation, including the dollar sign character. Instead, use either double-backslashes or forward slashes with double quotes. For example:

- "$design_name.adb"

Note: To use a name with special characters such as square brackets [], you must put the entire name between curly braces {} or put a slash character \\ immediately before each square bracket.

The following example shows a port name enclosed with curly braces:
pin_assign -port {LFSR_OUT[15]} -iostd lvttl -slew High

The next example shows each square bracket preceded by a slash:
pin_assign -port LFSR_OUT\[15\] -iostd lvttl -slew High

Lists and arrays
A list is a way to group data and handle the group as a single entity. To define a list, use curly braces {} and double quotes " ". For example, the following set command {1 2 3}, when followed by the list command, creates a list stored in the variable "a." This list will contain the items "1," "2," and "3."

set a { 1 2 3 }

Here's another example:

- set e 2
- set f 3
- set a [ list b c d [ expr $e + $f ] ]
- puts $a

displays (or outputs):

b c d 5

Tcl supports many other list-related commands such as lindex, linsert, llength, lrange, and lappend. For more information, refer to one of the books or web sites available on this subject.

Arrays
An array is another way to group data. Arrays are collections of items stored in variables. Each item has a unique address that you use to access it. You do not need to declare them nor specify their size.
Array elements are handled in the same way as other Tcl variables. You create them with the set command, and you can use the dollar sign ($) for their values.

```tcl
set myarray(0) "Zero"
set myarray(1) "One"
set myarray(2) "Two"
for {set i 0} {$i < 3} {incr i 1} {
    output:
    Zero
    One
    Two
}
```

In the example above, an array called "myarray" is created by the set statement that assigns a value to its first element. The for-loop statement prints out the value stored in each element of the array.

### Special arguments (command-line parameters)

You can determine the name of the Tcl script file while executing the Tcl script by referring to the $argv0 variable.

```tcl
puts “Executing file $argv0”
```

To access other arguments from the command line, you can use the `lindex` command and the `argv` variable:

To read the Tcl file name:

```tcl
lindex $argv 0
```

To read the first passed argument:

```tcl
lindex $argv 1
```

Example

```tcl
puts "Script name is $argv0" ; # accessing the scriptname
puts "first argument is [lindex $argv 0]"
puts "second argument is [lindex $argv 1]"
puts "third argument is [lindex $argv 2]"
puts "number of argument is [llength $argv]"
set des_name [lindex $argv 0]
puts "Design name is $des_name"
```

### Control structures

Tcl control structures are commands that change the flow of execution through a script. These control structures include commands for conditional execution (if-then-else-if-else) and looping (while, for, catch).

An "if" statement only executes the body of the statement (enclosed between curly braces) if the Boolean condition is found to be true.

#### if/else statements

```tcl
if { "$name" == "paul" } then {
    ...
    # body if name is paul
} elseif { $code == 0 } then {
    ...
    # body if name is not paul and if value of variable code is zero
} else {
    ...
    # body if above conditions is not true
}
```
for loop statement

A “for” statement will repeatedly execute the body of the code as long as the index is within a specified limit.

```tcl
for { set i 0 } { $i < 5 } { incr i } {
  ...
  # body here
}
```

while loop statement

A “while” statement will repeatedly execute the body of the code (enclosed between the curly braces) as long as the Boolean condition is found to be true.

```tcl
while { $p > 0 } {
  ...
}
```

catch statement

A “catch” statement suspends normal error handling on the enclosed Tcl command. If a variable name is also used, then the return value of the enclosed Tcl command is stored in the variable.

```tcl
catch { open "$inputFile" r } myresult
```

Print statement and Return values

Print Statement

Use the puts command to write a string to an output channel. Predefined output channels are “stdout” and “stderr.” If you do not specify a channel, then puts display text to the stdout channel.

Note: The STDIN Tcl command is not supported by Microsemi SoC tools.

Example:

```tcl
set a [ myprog arg1 arg2 ]
puts "the answer from myprog was $a (this text is on stdout)"
puts stdout "this text also is on stdout"
```

Return Values

The return code of a Tcl command is a string. You can use a return value as an argument to another function by enclosing the command with square brackets [ ].

Example:

```tcl
set a [ prog arg1 arg2 ]
exec $a
```

The Tcl command “exec” will run an external program. The return value of “exec” is the output (on stdout) from the program.

Example:

```tcl
set tmp [ exec myprog ]
puts stdout $tmp
```

Running Tcl Scripts from the GUI

Instead of running scripts from the command line, you can use Execute Script dialog box to run a script in the software.

To run a Tcl script from the GUI:

1. In Libero SoC, from the File menu choose Execute Script.
2. Click **Browse** to display the **Open** dialog box, in which you can navigate to the folder containing the script file to open. When you click **Open**, the software enters the full path and script filename into the **Execute** Script dialog box for you.

3. In the Arguments edit box, enter the arguments to pass to your Tcl script as shown in the following sample **Execute Script** dialog box. Separate each argument by a space character. For information about accessing arguments passed to a Tcl script, see "Running Scripts from the command line."

4. Click **Run**.

   Specify your arguments in the **Execute Script** dialog box. To get those argument values from your Tcl script, use the following:

   ```tcl
   puts "Script name: $argv0"
   puts "Number of arguments: $argc"
   set i 0
   foreach arg $argv {
       puts "Arg $i : $arg"
       incr i
   }
   ```

**Running Tcl Scripts from the Command Line**

You can run Tcl scripts from your Windows or Linux command line as well as pass arguments to scripts from the command line.

*To execute a Tcl script file in the Libero SoC Project Manager software from a shell command line:*

At the prompt, type the path to the Microsemi SoC software followed by the word "SCRIPT" and a colon, and then the name of the script file as follows:

```bash
<location of Microsemi SoC software>\bin\libero SCRIPT:<filename>
```

where `<location of Microsemi SoC software>` is the root directory in which you installed the Microsemi SoC software, and `<filename>` is the name, including a relative or full path, of the Tcl script file to execute. For example, to run the Tcl script file "myscript.tcl", type:
C:\libero\designer\bin\libero SCRIPT:myscript.tcl

If myscript.tcl is in a particular folder named "mydesign", you can use SCRIPT_DIR to change the current working directory before calling the script, as in the following example:
C:\libero\designer\bin\libero SCRIPT:myscript.tcl "SCRIPT_DIR:C:\actelprj\mydesign"

**To pass arguments from the command line to your Tcl script file:**
At the prompt, type the path to the Microsemi SoC software followed by the SCRIPT argument:

```
<location of Microsemi SoC software>\bin\designer SCRIPT:<filename "arg1 arg2 ...">" <--
For Libero
```

where `<location of Microsemi SoC software>` is the root directory in which you installed the Microsemi SoC software, and `<filename arg1 arg2 ...>` is the name, including a relative or full path, of the Tcl script file and arguments you are passing to the script file.

For example,
C:\libero\designer\bin\designer SCRIPT:myscript.tcl SCRIPT_ARGS:"one two three"

**To obtain the output from the log file:**
At the prompt, type the path to the Microsemi SoC software followed by the SCRIPT and LOGFILE arguments.

```
<location of Microsemi SoC software> SCRIPT:<filename> SCRIPT_ARGS:"a b c" LOGFILE:<output.log>
```

where
- `location of Microsemi SoC software` is the root directory in which you installed the Microsemi SoC software
- `filename` is the name, including a relative or full path, of the Tcl script file
- `SCRIPT_ARGS` are the arguments you are passing to the script file
- `output.log` is the name of the log file

For example,
C:\libero\designer\bin\designer SCRIPT:testTCLparam.tcl SCRIPT_ARGS:"a b c" LOGFILE:testTCLparam.log

**Exporting Tcl Scripts**

You can write out a Tcl script file that contains the commands executed in the current session. You can then use this exported Tcl script to re-execute the same commands interactively or in batch. You can also use this exported script to become more familiar with Tcl syntax.

You can export Tcl scripts from the Project Manager.

**To export a Tcl session script from the Project Manager:**
1. From the File menu, choose Export Script File. The Export Script dialog box appears.
2. Click OK. The Script Export Options dialog box appears:
3. Check the **Include Commands from Current Design [Project] Only** checkbox. This option applies only if you opened more than one design or project in your current session. If so, and you do not check this box, Project Manager exports all commands from your current session.

4. Select the radio button for the appropriate filename formatting. To export filenames relative to the current working directory, select **Relative filenames (default)** formatting. To export filenames that include a fully specified path, select **Qualified filenames (full path; including directory name)** formatting.

   Choose **Relative filenames** if you do not intend to move the Tcl script from the saved location, or **Qualified filenames** if you plan to move the Tcl script to another directory or machine.

5. Click **OK**.

Project Manager saves the Tcl script with the specified filename.

   **Note:**
   - When exporting Tcl scripts, Project Manager always encloses filenames in curly braces to ensure portability.
   - Libero SoC software does not write out any Tcl variables or flow-control statements to the exported Tcl file, even if you had executed the design commands using your own Tcl script. The exported Tcl file only contains the tool commands and their accompanying arguments.

**extended_run_lib**

   **Note:** This is not a Tcl command; it is a shell script that can be run from the command line.

   The `extended_run_lib` Tcl script enables you to run the multiple pass layout in batch mode from a command line.

   ```
   $ACTEL_SW_DIR/bin/libero script:$ACTEL_SW_DIR/scripts/extended_run_lib.tcl
   logfile:extended_run.log "script_args:-root path/designer/module_name [-n numPasses] [-
   starting_seed_index numIndex] [-compare_criteria value] [-c clockName] [-analysis value] [-
   placer_high_effort value]"
   ```

   **Note:**
   - There is no option to save the design files from all the passes. Only the (Timing or Power) result reports from all the passes are saved.
Arguments

-root path/designer/module_name
The path to the root module located under the designer directory of the Libero project.

[-n numPasses]
Sets the number of passes to run. The default number of passes is 5.

[-starting_seed_index numIndex]
Indicates the specific index into the array of random seeds which is to be the starting point for the passes. Value may range from 1 to 100. If not specified, the default behavior is to continue from the last seed index that was used.

[-compare_criteria value]
Sets the criteria for comparing results between passes. The default value is set to frequency when the -c option is given or timing constraints are absent. Otherwise, the default value is set to violations.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>frequency</td>
<td>Use clock frequency as criteria for comparing the results between passes. This option can be used in conjunction with the -c option (described below).</td>
</tr>
<tr>
<td>violations</td>
<td>Use timing violations as criteria for comparing the results between passes. This option can be used in conjunction with the -analysis, -slack_criteria and -stop_on_success options (described below).</td>
</tr>
<tr>
<td>power</td>
<td>Use total power as criteria for comparing the results between passes, where lowest total power is the goal.</td>
</tr>
</tbody>
</table>

[-c clockName]
Applies only when the clock frequency comparison criteria is used. Specifies the particular clock that is to be examined. If no clock is specified, then the slowest clock frequency in the design in a given pass is used. The clock name should match with one of the Clock Domains in the Summary section of the Timing report.

[-analysis value]
Applies only when the timing violations comparison criteria is used. Specifies the type of timing violations (the slack) to examine. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>max</td>
<td>Examines timing violations (slack) obtained from maximum delay analysis. This is the default.</td>
</tr>
<tr>
<td>min</td>
<td>Examines timing violations (slack) obtained from minimum delay analysis.</td>
</tr>
</tbody>
</table>

[-slack_criteria value]
Applies only when the timing violations comparison criteria is used. Specifies how to evaluate the timing violations (slack). The type of timing violations (slack) is determined by the -analysis option. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>worst</td>
<td>Sets the timing violations criteria to Worst slack. For each pass obtains the most amount of negative slack (or least amount of positive slack if all constraints are met) from the timing violations report. The largest value out of all passes will determine the best pass. This is the default.</td>
</tr>
</tbody>
</table>
**Value** | **Description**
---|---
`tns` | Sets the timing violations criteria to Total Negative Slack (tns). For each pass it obtains the sum of negative slack values from the first 100 paths from the timing violations report. The largest value out of all passes determines the best pass. If no negative slacks exist for a pass, then the worst slack is used to evaluate that pass.

`[-stop_on_success]`<br>Applies only when the timing violations comparison criteria is used. The type of timing violations (slack) is determined by the `-analysis` option. Stops running the remaining passes if all timing constraints have been met (when there are no negative slacks reported in the timing violations report).

`[-timing_driven|standard]`<br>Sets layout mode to timing driven or standard (non-timing driven). The default is `-timing_driven` or the mode used in the previous layout command.

`[-power_driven value]`<br>Enables or disables power-driven layout. The default is off or the mode used in the previous layout command. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
</table>
off | Does not run power-driven layout. |
on | Enables power-driven layout. |

`[-placer_high_effort value]`<br>Sets placer effort level. The default is off or the mode used in the previous layout command. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
</table>
off | Runs layout in regular effort. |
on | Activates high effort layout mode. |

**Return**

A non-zero value will be returned on error.

**Supported Families**

SmartFusion2, IGLOO2, RTG4

**Exceptions**

None

**See Also**

Sample Tcl Script - Project Manager

The following Tcl commands create a new project and set your project options.

SmartFusion2, IGLOO2, RTG4:

#Create new project
new_project -name proj1 -location c:/actelprj -family fusion -die AFS090 -package "108QFN" -hdl VHDL
#Import HDL source file named hdlsource1.vhd
import_files -hdl_source c:\hdlsource1.vhd
#Run synthesis and create a logfile named synth1.
run_synthesis -logfile synth.log
# he default ADB file, run Compile, run Layout
run_designer -logfile designer_log -adb new -compile TRUE -layout TRUE -export_ba TRUE
#Create a new project and set up a new design

Tcl Flow in the Libero SoC

Use the following commands to manage and build your project in the Libero SoC.

Design Flow in the Project Manager

The Tcl commands below outline the entire design flow. Once you create a project in the Project Manager you can use the commands below to complete every operation from synthesis to generating an HDL netlist. Click any command to go to the command definition.

run_synthesis [-logfile name]
run_simulation [-logfile name]
check_hdl -file filename
check_schematic -file filename
create_symbol [-module module]
export_io_constraints_from_adb -adb filename -output outputfilename
generate_ba_files -adb filename
generate_hdl_from_schematic [-module modulename]
generate_hdl_netlist [-netlist filename] [-run_drc "TRUE | FALSE"]
rollback_constraints_from_adb -adb filename -output output_filename
run_designer [-logfile filename] [-script "script to append"] [-append_commands "commands to execute"] [-adb "new | open | default"] [-compile "TRUE | FALSE"] [-layout "TRUE | FALSE"] [-export_ba "TRUE | FALSE"]
run_drc [-netlist file] [-gen_hdl "TRUE | FALSE"]

Manage Profiles in the Project Manager

add_profile -name profilename -type "synthesis | simulation | stimulus | flashpro | physynth | coreconfig" -tool profiletool -location tool_location [-args tool_parameters] [-batch "TRUE | FALSE"]
edit_profile -name profilename -type "synthesis | simulation | stimulus | flashpro | physynth | coreconfig" -tool profiletool -location tool_location [-args tool_parameters] [-batch "TRUE | FALSE"] [-new_name name]
export_profiles -file name [-export "predefined | user | all"]
remove_profile -name profile_name
select_profile -name profile_name
Linking Files

change_link_source -file filename -path pathname
create links [-hdl_source file]* [-stimulus file]* [-sdc file]* [-pin file]* [-dcf file]* [-gcf file]* [-pdc file]* [-crt file]* [-vcd file]*
export_as_link -file filename -path link_path
unlink -file file [-local local_filename]

Set Simulation Options in the Project Manager

add_modelsim_path -lib library_name [-path library_path] [-remove " "]

Set Device in the Project Manager

set_device [-family family] [-die die] [-package package]

Miscellaneous Operations in the Project Manager

project_settings [-hdl "VHDL | VERILOG"] [-auto_update_modelsim_ini "TRUE | FALSE"] [-auto_update_viewdraw_ini "TRUE | FALSE"] [-block_mode "TRUE | FALSE"] [-auto_generate_synth_hdl "TRUE | FALSE"] [-auto_run_drc "TRUE | FALSE"] [-auto_generate_viewdraw_hdl "TRUE | FALSE"] [-auto_file_detection "TRUE | FALSE"]
refresh
set_option [-synth "TRUE | FALSE"] [-module "module_name"]
remove_core -name core_name
Project Manager Tcl Commands

add_file_to_library
Tcl command; adds a file to a library in your project.

add_file_to_library
library name
file name

Arguments
- library name
  Name of the library where you wish to add your file.
- file name
  Specifies the new name of the file you wish to add (must be a full pathname).

Example
Add a file named foo.vhd from the ./project/hdl directory to the library 'my_lib'
add_file_to_library -library my_lib -file ./project/hdl/foo.vhd

See Also
add_library
remove_library
rename_library

add_library
Tcl command; adds a VHDL library to your project.

add_library
library name

Arguments
- library name
  Specifies the name of your new library.

Example
Create a new library called 'my_lib'.
add_library -library my_lib

See Also
remove_library
rename_library

add_modelsim_path
Tcl command; adds a ModelSim simulation library to your project.
add_modelsim_path -lib library_name [-path library_path] [-remove " "]

Arguments
- **-lib library_name**
  Name of the library you want to add.
- **-path library_path**
  Path to library that you want to add.
- **-remove " "**
  Name of library you want to remove (if any).

Example
Add the ModelSim library 'msim_update2' located in the c:\modelsim\libraries directory and remove the library 'msim_update1':
```
add_modelsim_path -lib msim_update2 [-path c:\modelsim\libraries] [-remove msim_update1]
```

add_profile
Tcl command; sets the same values as the **Add or Edit Profile dialog box**. The newly added profile becomes the active tool profile for the specified type of tool.
```
add_profile -name profilename -type value -tool profiletool -location tool_location [-args tool_parameters] [-batch value]
```

Arguments
- **-name profilename**
  Specifies the name of your new profile.
- **-type value**
  Specifies your profile type, where value is one of the following:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>synthesis</td>
<td>New profile for a synthesis tool</td>
</tr>
<tr>
<td>simulation</td>
<td>New profile for a simulation tool</td>
</tr>
<tr>
<td>stimulus</td>
<td>New profile for a stimulus tool</td>
</tr>
<tr>
<td>flashpro</td>
<td>New FlashPro tool profile</td>
</tr>
</tbody>
</table>

- **-tool profiletool**
  Name of the tool you are adding to the profile.
- **-location tool_location**
  Full pathname to the location of the tool you are adding to the profile.
- **-args tool_parameters**
  Profile parameters (if any).
- **-batch value**
  Runs the tool in batch mode (if TRUE). Possible values are:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TRUE</td>
<td>Runs the profile in batch mode</td>
</tr>
<tr>
<td>Value</td>
<td>Description</td>
</tr>
<tr>
<td>---------</td>
<td>------------------------------------</td>
</tr>
<tr>
<td>FALSE</td>
<td>Does not run the profile in batch mode</td>
</tr>
</tbody>
</table>

**Example**

Create a new Synthesis tool profile called 'synpol' linked to a Synplify Pro ME installation in my /sqatest/bin directory

```plaintext
add_profile -type synthesis -name synpol -tool "Synplify Pro ME" -location "/sqatest9/bin/synplify_pro" -batch FALSE
```

**associate_stimulus**

Tcl command; associates a stimulus file in your project.

```plaintext
associate_stimulus
[-file name]*
[-mode value]
-module value
```

**Arguments**

- **-file name**
  Specifies the name of the file to which you want to associate your stimulus files.

- **-mode value**
  Specifies whether you are creating a new stimulus association, adding, or removing; possible values are:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>new</td>
<td>Creates a new stimulus file association</td>
</tr>
<tr>
<td>add</td>
<td>Adds a stimulus file to an existing association</td>
</tr>
<tr>
<td>remove</td>
<td>Removes an stimulus file association</td>
</tr>
</tbody>
</table>

- **-module value**
  Sets the module, where value is the name of the module.

**Example**

The example associates a new stimulus file 'stim.vhd' for stimulus.

```plaintext
associate_stimulus -file stim.vhd -mode new -module stimulus
```

**change_link_source**

Tcl command; changes the source of a linked file in your project.

```plaintext
change_link_source -file filename -path new_source_path
```

**Arguments**

- **-file filename**
  Name of the linked file you want to change.

- **-path new_source_path**
  Location of the file you want to link to.
Example

Change the link to a file 'sim1.vhd' in your project and link it to the file in

`c:\microsemi\link_source\simulation_test.vhd`

`change_link_source -file sim1.vhd -path c:\microsemi\link_source\simulation_test.vhd`

ccheck_fdc_constraints

This Tcl command checks FDC constraints files associated with the Synthesis tool.

```
check_fdc_constraints -tool {synthesis}
```

Arguments

- `tool {synthesis}`

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Example

```
check_fdc_constraints -tool {synthesis}
```

Return Value

This command returns "0" on success and "1" on failure.

ccheck_ndc_constraints

This Tcl command checks NDC constraints files associated with the Synthesis tool. NDC constraints are used to optimize the post-synthesis netlist with the Libero SoC Compile engine.

```
check_ndc_constraints -tool {synthesis}
```

Arguments

- `tool {synthesis}`

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Example

```
check_ndc_constraints -tool {synthesis}
```

See Also

- `set_ioph`

check_pdc_constraints

This Tcl command checks PDC constraints files associated with the Libero Place and Route tool.
check_pdc_constraints -tool {designer}

Arguments
- tool {designer}

Supported Families
- SmartFusion2
- IGLOO2
- RTG4

Example
check_pdc_constraints -tool {designer}

Return Value
This command returns “0” on success and “1” on failure.

check_sdc_constraints
This Tcl command checks SDC constraints files associated with the Libero tools: designer, synthesis, or timing.

Arguments
- tool {synthesis|designer|timing}

Supported Families
- SmartFusion2
- IGLOO2
- RTG4

Example
This command checks the SDC constraint files associated with Timing Verification.
check_sdc_constraints -tool {timing}
This command checks the SDC constraint files associated with Place and Route.
check_sdc_constraints -tool {designer}
This command checks the SDC constraint files associated with Synthesis.
check_sdc_constraints -tool {synthesis}

Return Value
The command returns “0” on success and “1” on failure.

configure_tool
configure_tool is a general-purpose Tcl command that is used to set the parameters for any tool called by Libero for the SmartFusion2, IGLOO2, RTG4 families. The command requires the name of the tool and one or more parameters in the format tool_parameter:Value. These parameters are separated and passed to the tool to set up its run.
configure_tool
-name {<tool_name>} # Each tool_name has its own set of parameters
-params {<parameter>:<value>} # List of parameters and values

tool_name ::= COMPILE | CONFIGURE_PROG_OPTIONS | CONFIGURE_PROG_OPTIONS_RTG4 | SYNTHESIZE | PLACEROUTE | GENERATEPROGRAMMINGDATA | GENERATEPROGRAMMINGFILE | PROGRAMDEVICE | PROGRAM_OPTIONS | PROGRAMMER_INFO | IO_PROGRAM_STATE | SPM | FLASH_FREEZE | PROGRAM_RECOVERY | USER_PROG_DATA | VERIFYTIMING | INIT_LOCK

### Supported tool_names

The following table lists the supported tool_names.

<table>
<thead>
<tr>
<th>tool_name</th>
<th>Parameter (-params)</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>COMPILE</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>&quot;CONFIGURE_PROG_OPTIONS &quot; on page 90</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>&quot;CONFIGURE_PROG_OPTIONS_RTG4 (RTG4 only)&quot; on page 91</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>SYNTHESIZE</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>PLACEROUTE</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>GENERATEPROGRAMMINGDATA</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>&quot;GENERATEPROGRAMMINGFILE &quot; on page 93</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>PROGRAMDEVICE</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>PROGRAM_OPTIONS</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>PROGRAMMER_INFO</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>IO_PROGRAMMING_STATE</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>SPM</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>FLASH_FREEZE</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>tool_name</td>
<td>Parameter (-params)</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------</td>
<td>-------------------------------------------------------------------------------------</td>
<td>------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>PROGRAM_RECOVERY</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>USER_PROG_DATA</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>VERIFYTIMING</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
<tr>
<td>&quot;INIT_LOCK&quot; on page 93</td>
<td>See the topic for parameter names and values.</td>
<td>See the topic for description.</td>
</tr>
</tbody>
</table>

See the [SmartFusion2, IGLOO2, and RTG4 Tcl for SoC document](#) for the full list of parameters and values.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Example**

```tcl
configure_tool -name {COMPILE} \
  -params {DISPLAY_FANOUT_LIMIT:10} \
  -params {MERGE_SDC:true}
configure_tool -name {SYNTHESIZE} -params {LANGUAGE_SYSTEM_VLOG:true}
configure_tool -name {PLACEROUTE} -params {PDPR:false} -params \ 
  {TDPR:true} -{EFFORT_LEVEL:false} -params {INCRPLACEANDROUTE:false}
```

For example, the command:

```tcl
configure_tool \ 
  -name {COMPILE} -params {DISPLAY_FANOUT_LIMIT:10} \ 
  -params {MERGE_SDC:true}
```

sets the COMPILE command options DISPLAY_FANOUT_LIMIT to 10 and MERGE_SDC to true.

There are alternative ways to write these commands to fit your coding style, as shown in the following examples.

**Method 1 - single line**

```tcl
configure_tool -name {COMPILE} -params {DISPLAY_FANOUT_LIMIT:10} -params {MERGE SDC:true}
```

**Method 2 - one statement, multiple lines**

```tcl
configure_tool \ 
  -name {COMPILE} \ 
  -params {DISPLAY_FANOUT_LIMIT:10} \ 
  -params {MERGE_SDC:true}
```

**Method 3 - multiple statements**

```tcl
configure_tool -name {COMPILE} -params {DISPLAY_FANOUT_LIMIT:10}
configure_tool -name {COMPILE} -params {MERGE_SDC:true}
```

**See Also**

- [Project Manager Tcl Command Reference](#)
- [Tcl documentation conventions](#)
create_and_configure_core

Tcl command; creates a configured core component for a core selected from the Libero Catalog.

To use this command to create a configured core component with valid parameters and values, it is recommended to use the GUI to configure the core as desired. Then export the core configuration Tcl description by selecting the “Export Component Description(Tcl)” action on the right-click menu of the component in the Design Hierarchy. You can then use the exported Tcl command to create the configured core in a regular Tcl script.

```
create_and_configure_core \
-core_vlnv Vendor:Library:Name:version \
-component_name component_name \ 
[-params core_parameters]
```

**Arguments**

- `create_and_configure_core` *-core_vlnv Vendor:Library:Name:Version*
  Specifies the version identifier of the core being configured. It is mandatory.

- `create_and_configure_core` *-component_name component_name*
  Specifies the name of the configured core component. It is mandatory.

- `create_and_configure_core` *-params core_parameters*
  Specifies the parameters that need to be configured for the core component. It is optional. If the core parameters are not specified with this argument, the component is configured and generated with the core's default configuration. It is recommended to specify all the core parameters of interest as a part of this argument in this command.

**Examples**

```
create_and_configure_core -core_vlnv {Actel:SgCore:PF_CCC:1.0.115} -component_name {PF_CCC_C3} -params { "PLL_IN_FREQ_0:25" \ "GL0_0_IS_USED:true" \ "GL0_0_OUT_FREQ:150" \ "GL0_1_IS_USED:true" \ "GL0_1_OUT_FREQ:50" }
```

**Notes**

For DirectCore and Solutions cores, refer to the core handbook or the core user guide for a list of valid parameters and values.

**See Also**

[Tcl Command Documentation Conventions](#)

create_set

Tcl command; creates a set of paths to be analyzed. Use the arguments to specify which paths to include. To create a set that is a subset of a clock domain, specify it with the `-clock` and `-type` arguments. To create a set that is a subset of an inter-clock domain set, specify it with the `-source_clock` and `-sink_clock` arguments. To create a set that is a subset (filter) of an existing named set, specify the set to be filtered with the `-parent_set` argument.

```
create_set \-name <name>\ -parent_set <name>\ -type <set_type>\ -clock <clock name>\ -source_clock <clock name>\ -sink <port/pin pattern>\ -sink <port/pin pattern>
```
Arguments

- name <name>
  Specifies a unique name for the newly created path set.
- parent_set <name>
  Specifies the name of the set to filter from.
- clock <clock_name>
  Specifies that the set is to be a subset of the given clock domain. This argument is valid only if you also specify the -type argument.
- type <value>
  Specifies the predefined set type on which to base the new path set. You can only use this argument with the -clock argument, not by itself.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>reg_to_reg</td>
<td>Paths between registers in the design</td>
</tr>
<tr>
<td>async_to_reg</td>
<td>Paths from asynchronous pins to registers</td>
</tr>
<tr>
<td>reg_to_async</td>
<td>Paths from registers to asynchronous pins</td>
</tr>
<tr>
<td>external_recovery</td>
<td>The set of paths from inputs to asynchronous pins</td>
</tr>
<tr>
<td>external_removal</td>
<td>The set of paths from inputs to asynchronous pins</td>
</tr>
<tr>
<td>external_setup</td>
<td>Paths from input ports to registers</td>
</tr>
<tr>
<td>external_hold</td>
<td>Paths from input ports to registers</td>
</tr>
<tr>
<td>clock_to_out</td>
<td>Paths from registers to output ports</td>
</tr>
</tbody>
</table>

- in_to_out
  Specifies that the set is based on the “Input to Output” set, which includes paths that start at input ports and end at output ports.
- source_clock <clock_name>
  Specifies that the set will be a subset of an inter-clock domain set with the given source clock. You can only use this option with the -sink_clock argument.
- sink_clock <clock_name>
  Specifies that the set will be a subset of an inter-clock domain set with the given sink clock. You can only use this option with the -source_clock argument.
- source <port/pin_pattern>
  Specifies a filter on the source pins of the parent set. If you do not specify a parent set, this option filters all pins in the current design.
- sink <port/pin_pattern>
  Specifies a filter on the sink pins of the parent set. If you do not specify a parent set, this option filters all pins in the current design.

Supported Families

SmartFusion2
IGLOO2
RTG4
Examples

```
create_set -name { my_user_set } -source { C* } -sink { D* }  
create_set -name { my_other_user_set } -parent_set { my_user_set } -source { CL* }  
create_set -name { adder } -source { ALU_CLOCK } -type { REG_TO_REG } -sink { ADDER* }  
create_set -name { another_set } -source_clock { EXTERN_CLOCK } -sink_clock { MY_GEN_CLOCK }  
```

create_smartdesign

Tcl command; creates a SmartDesign.

```
create_smartdesign \
-sd_name smartdesign_component_name
```

Arguments

```
-sd_name smartdesign_component_name
```

Specifies the name of the SmartDesign component to be created. It is mandatory.

Examples

```
create_smartdesign -sd_name {top}
```

See Also

Tcl Command Documentation Conventions

download_latest_cores

This Tcl command is used to download the latest cores into the vault. A project does not need to be open to run this command.

```
download_latest_cores
```

This command takes no arguments.

If there are no cores to be downloaded, you will see the following message:

```
Info:All the latest cores are present in the vault.
```

export_ba_files

Tcl command to export the backannotated files. The backannotated files are <design_name>_ba.v (Verilog backannotated netlist) or <design_name>_ba.vhd (VHDL backannotated netlist) and <design_name>_ba.sdf (Standard Delay Format) timing file. These files are passed to the default simulator for postlayout simulation.

```
export_ba_files \
-export_dir {absolute path to folder location}  
-export_file_name {name of file}  
-vhdl {value}  
-min_delay {value}
```

Arguments

```
-export_dir {absolute path to directory/folder location}
```

Folder/directory location.

```
-export_file_name {name of file}
```

File name to generate the files. If not specified, it takes <design_name> as the default.
-vhdl \{value\}

Generates the <design_name>_ba.v and <design_name>_ba.sdf when set to 0 and <design_name>_ba.vhd and <design_name>_ba.sdf when set to 1. Default is 0.

-min_delay \{value\}

Set to 1 to export enhanced min delays to include your best-case timing results in your Back Annotated file. Default is 0.

**Returns**

Returns 0 on success, 1 on failure.

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Example**

```tcl
export Ba files
-export_dir {E:\designs\export\sdi}\
-export_file_name {test}\
-vhdl 0\
-min_delay 1
```

**export_bitstream_file**

Configures the parameters for the bitstream to be exported from Libero.

**Note:** RTG4 devices do not support the security, SPI directory, or serialization options that SmartFusion2 and IGLOO2 devices support.

The syntax for the Export Bitstream File TCL command for SmartFusion2 and IGLOO2 is below:

```tcl
export_bitstream_file
[-file_name file]  
[-export_dir dir]  
[-format STP | CHAIN_STP | DAT | SPI]  
[-force rtg4 otp 0 | 1]  
[-master_file 0 | 1]  
[-master_file_components SECURITY | FABRIC | ENVM]  
[-encrypted_uk1_file 1 | 0]  
[-encrypted_uk2_file_components FABRIC | ENVM]  
[-encrypted_uk2_file 1 | 0]  
[-encrypted_uk3_file_components FABRIC | ENVM]  
[-encrypted_uk3_file 1 | 0]  
[-trusted_facility_file 1 | 0]  
[-trusted_facility_file_components FABRIC | ENVM]  
[-add golden image 1 | 0]  
[-golden image address golden image address]  
[-golden image design version golden_image design version]  
[-add update image 1 | 0]  
[-update image address update image address]  
[-update image design version update_image design version]  
[-serialization stapl_type SINGLE | MULTIPLE]  
[-serialization_target_solution Flashpro_3_4_5 | generic_STAPL_player]
```
The syntax for the Export Bitstream File TCL command for RTG4 is below:

```
export_bitstream_file
[-file_name file]
[-export_dir dir]
[-format STP | CHAIN_STP | DAT | SPI]
[-force_rtg4_otp 0 | 1]
```

### Arguments

- **-file_name file**
  The name of the file. File name must start with design name. If omitted, design name will be used.

- **-export_dir dir**
  Location where the bitstream file will be exported. If omitted, design export folder will be used.

- **-format STP | CHAIN_STP | DAT | SPI**
  Specifies the bitstream file formats to be exported. Space is used as a delimiter. If omitted, STP and DAT files will be exported.

- **-force_rtg4_otp 0 | 1**
  Enforces the use of One-time programming (OTP). It is optional.

### Supported Families

- SmartFusion2
- IGLOO2
- RTG4

### Security-related options:

Note: One of the trusted_facility file or master_file or encrypted_uek1_file or encrypted_uek2_file or encrypted_uek3_file must be set to “1”. 1 indicates that this particular file type will be exported; 0 indicates that it will not be exported. For example, if trusted_facility_file is set to 1, all other file types must be set to 0. Or, if trusted_facility_file is set to 0, a combination of master_file and euk1_file, euk2_file and euk3_file can be set to 1. In this case, master_file must be set to 1.

- **trusted_facility_file 1 | 0**
  Specifies the bitstream file to be exported.

- **trusted_facility_file_components FABRIC | ENVM**
  Specifies the components of the design that will be saved to the bitstream file. The value can be any one or both of FABRIC and ENVM.

- **master_file 0 | 1**
  Specifies the bitstream files to be exported. Depends on the selected security.
  Note: If -master_file is 1, SECURITY must be selected.

- **master_file_components SECURITY | FABRIC | ENVM**
  Specifies the components in the design that will be saved to the bitstream file. The value can be one or any combination of SECURITY, FABRIC, ENVM.

**Notes:**

1. The SECURITY option is available in -bitstream_file_components only when file type is MASTER in –bitstream_file_type.

- **encrypted_uek1_file 0 | 1**
-encrypted_uek1_file_components FABRIC | ENVM
Specifies the components of the design that will be saved to uek1 bitstream. The value can be any one or both of FABRIC and ENVM.
-encrypted_uek2_file 0 | 1
-encrypted_uek2_file_components FABRIC | ENVM
Specifies the components of the design that will be saved to uek2 bitstream. The value can be any one or both of FABRIC and ENVM.
-encrypted_uek3_file 0 | 1
-encrypted_uek3_file_components FABRIC | ENVM
Specifies the components of the design that will be saved to uek3 bitstream. The value can be any one or both of FABRIC and ENVM.
-master_include_plaintext_passkey 0 | 1
Specifies that the master file includes plaintext passkey. This argument is optional.
-uek1_include_plaintext_passkey 0 | 1
Specifies that uek1 includes plaintext passkey. This argument is optional.
-uek2_include_plaintext_passkey 0 | 1
Specifies that uek2 includes plaintext passkey. This argument is optional.
-uek3_include_plaintext_passkey 0 | 1
Specifies that uek3 includes plaintext passkey. This argument is optional.

Bitstream file to be exported and the components of the design that will be saved to the bitstream file are required.

SPI-related options:
- add_golden_image 1 | 0
To enable/disable golden SPI image in SPI directory.
- golden_image_address
Hexadecimal address for golden image.
- golden_image_design_version
Decimal value for golden image design version.
- add_update_image 1 | 0
To enable/disable update SPI image.
- update_image_address
Hexadecimal value for update image address.
- update_image_design_version
Decimal value for update image design version.

SPI-related options are optional.

Serialization options:
- serialization_stapl_type
Serialization stapl file type either single or multiple.
- serialization_target_solution
Target programming hardware – Flashpro_3_4_5 or generic_STAPL_player.

Serialization options are optional.

Note: A TCL script file exported from Libero will include all command options. You can modify options you need and remove options you do not need.

Supported Families
SmartFusion2, IGLOO2, RTG4

Example
Export a bitstream file:
Export bitstream file for design with default security

```tcl
export_bitstream_file \
    -trusted_facility_file 1 \
    -trusted_facility_file_components {FABRIC}
```

Export bitstream file for design with custom security options

Export bitstreams to master and uek1 encrypted files. Master file to include security and fabric components, uek1 encrypted file to include FABRIC along with Export Pass Keys in Plaintext option.

```tcl
export_bitstream_file \
    -file_name {top} \ 
    -export_dir \{X:\10_docs_review\12.0_Release\102018\g4_clint_fftousram\designer\top\export\} \ 
    -format {STP DAT} \ 
    -master_file 1 \ 
    -master_file_components {SECURITY FABRIC} \ 
    -encrypted_uek1_file 1 \ 
    -encrypted_uek1_file_components {FABRIC} \ 
    -encrypted_uek2_file 0 \ 
    -encrypted_uek2_file_components {} \ 
    -trusted_facility_file 0 \ 
    -trusted_facility_file_components {} \ 
    -add_golden_image 0 \ 
    -golden_image_address {} \ 
    -add_update_image 0 \ 
    -golden_image_design_version {} \ 
    -update_image_address {} \ 
    -update_image_design_version {} \ 
    -serialization_stapl_type {SINGLE} \ 
    -serialization_target_solution {FLASHPRO_3_4_5} \ 
    -master_include_plaintext_passkey 1 \ 
    -uek1_include_plaintext_passkey 1 \ 
    -uek2_include_plaintext_passkey 0
```

Export SPI directory for programming recovery

```tcl
export_bitstream_file \ 
    -add_golden_image 1 \ 
    -golden_image_address {1111} \ 
    -golden_image_design_version {1} \ 
    -add_update_image 1 \ 
    -update_image_address {1211} \ 
    -update_image_design_version {1}
```

Export bitstream file for MSS/serialization clients

```tcl
export_bitstream_file \ 
    -file_name {mss1} \ 
    -format {STP} \ 
    -trusted_facility_file 1 \ 
    -trusted_facility_file_components {FABRIC ENVM} \ 
    -serialization_stapl_type {SINGLE} \ 
    -serialization_target_solution {FLASHPRO_3_4_5}
```

Export bitstream file for RTG4

```tcl
export_bitstream_file \ 
    -file_name {sd1} \ 
    -export_dir {D:\sd_prj\jade_rtg4\designer\sd1\export} \ 
```
export_bsdsl_file

Tcl command to export the BSDL to a specified file. The exported file has a *.bsd file name extension.

```
export_bsdsl_file
-file {absolute path and name of BSDL file}
```

**Arguments**

- `file {absolute path and name of BSDL file}`
  
  Specifies the *.bsd file.

**Returns**

Returns 0 on success, 1 on failure.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Example**

```
export_bsdsl_file
-file {E:/designs/export/sd1.bsd}
```

export_component_to_tcl

Tcl command; exports the Tcl command for the selected component. The components can be SmartDesign components, configured cores and HDL+ cores.

```
export_component_to_tcl \
-component component_name \ 
[-library library_name] \ 
[-package package_name] \ 
-file file_path
```

**Arguments**

- `component component_name`
  
  Specifies the name of the component for which the Tcl command is exported. It is mandatory.

- `library library_name`
  
  Specifies the name of the library the component belongs to. It is optional.

- `package package_name`
  
  Specifies the name of the package the HDL+core belongs to. It is optional.

- `file file_path`
  
  Specifies the path where you wish to export the Tcl file. It is mandatory.

**Supported Families**

- SmartFusion2
- IGLOO2
Example

```tcl
export_component_to_tcl -component {pattern_gen_checker} -library {work} -package {} -file {./pattern_gen_checker.tcl}
```

**export_firmware**

This Tcl command exports design firmware configuration data, which consists of:
- Component configuration for MSS/HPMS, FDDR and SERDES blocks instantiating your design
- Compatible firmware drivers for your peripherals

It also creates a workspace and project specific to the IDE tool of your choice (SoftConsole, Keil or IAR).

To open your exported firmware projects you must invoke the third-party development tool (SoftConsole, Keil or IAR) outside Libero SoC.

If you make any changes to your design, you must re-export firmware.

```tcl
export_firmware
-export_dir {D:\Designs\software_drivers}
-create_project {0|1}
-software_ide {SoftConsole|Keil|IAR}
```

**Arguments**

- `-export_dir {absolute or relative path of the folder location}`
  Specifies the path and name of folder for the exported firmware.
- `-create_project {0|1}`
  Generates the workspace and project for the specified IDE tool. Default is 0.
- `-software_ide {IDE_toolname}`
  Specifies one of three IDE tool name: SoftConsole | IAR | Keil.

If you use `-create_project` parameter and `-software_ide` parameter at the same time, Libero exports the workspace and project for that Software IDE tool to the `export_path{SoftConsole|Keil|IAR}` folder.

**Returns**

Returns 0 on success, 1 on failure.

**Supported Families**

SmartFusion2, IGLOO2, RTG4

**Example**

```tcl
export_firmware \ 
-export_dir {D:\Designs\software_drivers} \ 
-create_project {1} \ 
-software_ide {SoftConsole}
```

**export_fp_pdc**

Tcl command to export the Floorplanning Physical Design Constraint (*.pdc) File. The exported file has a 
*_fp.pdc file name extension.
export_fp_pdc
-`file` *(absolute path and name of *fp.pdc* file)*
-`mode` *(PDC_PLACE | PDC_FULL_PLACEMENT)*

**Arguments**

- `file` *(absolute path and name of *fp.pdc* file)*
  Specifies the *fp.pdc* file.
- `mode` *(PDC_PLACE | PDC_FULL_PLACEMENT)*
  Use PDC_PLACE to export user’s floorplanning constraints, for example, fixed logic and regions.
  Use PDC_FULL_PLACEMENT to export information about all of the physical design constraints (I/O constraints, I/O Banks, routing constraints, region constraints, global and local clocks).

**Returns**

Returns 0 on success, 1 on failure.

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Example**

```tcl
eexport_fp_pdc 

- file {E:/designs/export/sd1_fp.pdc} 

- mode {PDC_FULL_PLACEMENT}
```

**export_ibis_file**

Tcl command to export the IBIS (Input/Output Buffer Information Specification) model report. The exported file has a *.ibs* file name extension.

export_ibis_file
-`file` *(absolute path and name of *.ibs* file)*

**Arguments**

- `file` *(absolute path and name of *.ibs* file)*
  Specifies the IBIS file to export.

**Returns**

Returns 0 on success, 1 on failure.

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Example**

```tcl
eexport_ibis_file
```
export_io_pdc

Tcl command to export the I/O constraints Physical Design Constraint (*.pdc) File. The exported file has a _io.pdc file name extension.

```
export_io_pdc
-file {absolute path and name of *_io.pdc file}
```

Arguments

- `file {absolute path and name of *_io.pdc file}`
  Specifies the *_io.pdc file.

Returns

Returns 0 on success, 1 on failure.

Supported Families

SmartFusion2
IGLOO2
RTG4

Example

```
export_io_pdc
-file {E:/designs/export/sd1_io.pdc}
```

export_job_data

Tcl command; configures the parameters for the Job Manager Data Container file (JDC) to be exported from Libero and used by Job Manager.

```
export_job_data -file_name name -export_dir path -components "SECURITY | FABRIC | ENVM"
```

Arguments

All parameters are optional. Default values are used if parameters are omitted.

- `file_name name`
  Name of the file that will be saved. If omitted, it will be the design name.

- `export_dir path`
  Location where the file will be saved. If omitted, it will be the Libero export folder.

- `components SECURITY | FABRIC | ENVM`
  Specifies the components of the design that will be saved to the file. The value can be any one or a combination of SECURITY and FABRIC and ENVM if they are available in the design. If the parameter is omitted, all available components of the design will be saved.

Note: The SECURITY component must be selected if user security is initialized for the current Libero design.

Supported Families

SmartFusion2, IGLOO2
Example

```
export_job_data \
-file_name {sd1} \
-export_dir {D:\sd_prj\test3T\designer\sd1\export} \
-components {FABRIC}
```

See Also

- Programming Job Manager User Guide
- SPPS User Guide

**export_netlist_file**

Tcl command to export the netlist after the compile state has completed. The netlist can be either Verilog or VHDL. Microsemi recommends exporting the netlist after the compile state has successfully completed.

```bash
export_netlist_file
-file {absolute path and filename for netlist}
-vhdl {value}
```

**Arguments**

- `-file {absolute path and filename}`
  Specifies the path and name of netlist file.
- `-vhdl {value}`
  Generates the netlist in VHDL (when set to 1) or Verilog (when set to 0). Default is 0 (Verilog netlist).

**Returns**

Returns 0 on success, 1 on failure.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

Example

```
export_netlist_files
-file {E:/designs/export/sd1/sd1.v}
-vhdl 0
```

**export_pin_reports**

Tcl command to configure and export a pin report file to a specified folder/directory location.

```bash
export_pin_reports
-export_dir {absolute path to folder location}
-pin_report_by_name {value}
-pin_report_by_pkg_pin {value}
-bank_report {value}
-io_report {value}
```

**Arguments**

- `-export_dir {absolute or relative path to the folder for pin report file}`
Specifies the folder.
-\texttt{pin\_report\_by\_name} \{\texttt{value}\}
  Set to 1 to have the pin report sorted by pin name. Default is 1.
-\texttt{pin\_report\_by\_pkg\_pin} \{\texttt{value}\}
  Set to 1 to have pin report sorted by package pin number, 0 to not sort by package pin number. Default is 1.
-\texttt{bank\_report} \{\texttt{value}\}
  Set to 1 to generate the I/O bank report, 0 to not generate the report. Default is 1.
-\texttt{io\_report} \{\texttt{value}\}
  Set to 1 to generate the I/O report, 0 to not generate the report. Default is 1.

At least one argument must be specified for this command.

\textbf{Returns}

Returns 0 on success, 1 on failure.

\textbf{Supported Families}

\begin{itemize}
  \item SmartFusion2
  \item IGLOO2
  \item RTG4
\end{itemize}

\textbf{Example}

\begin{verbatim}
export\_pin\_reports\$
  \textbf{-\texttt{export\_dir}} \{E:/designs/export\}\n  \textbf{-\texttt{pin\_report\_by\_name}} \{1\}\n  \textbf{-\texttt{pin\_report\_by\_pkg\_pin}} \{0\}\n  \textbf{-\texttt{bank\_report}} \{1\}\n  \textbf{-\texttt{io\_report}} \{1\}
\end{verbatim}

\textbf{export\_prog\_job}

Tcl command; configures the parameters for the FlashPro Express programming job to be exported.

\textbf{Note:} The Programming Mode (JTAG/SPI-Slave) setting from the Programming Connectivity and Interface tool will be exported in the job file.

\textbf{Note:} RTG4 devices do not support the security options supported by SmartFusion2 and IGLOO2 devices.

The syntax for the export programming job TCL command for SmartFusion2 and IGLOO2 is shown below:

\begin{verbatim}
\textbf{export\_prog\_job}
\textbf{-\texttt{job\_file\_name}} \texttt{file}
\textbf{-\texttt{export\_dir}} \texttt{dir}
\textbf{-\texttt{bitstream\_file\_type}} \texttt{TRUSTED\_FACILITY} | \texttt{MASTER} | \texttt{UEK1} | \texttt{UEK2}
\textbf{-\texttt{bitstream\_file\_components}} \texttt{SECURITY} | \texttt{FABRIC} | \texttt{ENVM}
\textbf{-\texttt{include\_plaintext\_passkey}} \texttt{0} | \texttt{1}
\end{verbatim}

The syntax for the export programming job TCL command for RTG4 is below:

\begin{verbatim}
\textbf{export\_prog\_job}
\textbf{-\texttt{job\_file\_name}} \texttt{file}
\textbf{-\texttt{export\_dir}} \texttt{dir}
\textbf{-\texttt{force\_rtg4\_otp}} \texttt{0} | \texttt{1}
\end{verbatim}
Arguments

- **job_file_name** *file*
  The name of the file. Name must start with design name. If omitted, design name will be used.
- **export_dir** *dir*
  Location where the job file will be saved; any folder can be specified. The default folder is the Libero export folder.
- **force_rtg4_otp** 0 | 1
  Enforces the use of one-time programming (OTP). This argument is optional. The default value is 0.
- **bitstream_file_type** TRUSTED_FACILITY | MASTER | UEK1 | UEK2
  Bitstream file to be included in the programming job. Only one bitstream file can be included in a programming job.
- **bitstream_file_components** SECURITY | FABRIC | ENVM
  The list of components to be included in the programming job. Components should be delimited by space. bitstream_file_components can be any one of SECURITY, FABRIC, ENVM or any combination of them.

Notes:
1. The SECURITY option is available in -bitstream_file_components only when file type is MASTER in –bitstream_file_type.
- **include_plaintext_passkey** 0 | 1
  Includes plaintext passkey. This argument is optional.

Supported Families
- SmartFusion2
- IGLOO2
- RTG4

Examples

**SmartFusion2/IGLOO2**
```
export_prog_job \
- job_file_name {top} \ 
- export_dir {X:\10_docs_review\12.0_Release\102018\g4_clkint_fftousram\designer\top\export} \ 
- bitstream_file_type {MASTER} \ 
- bitstream_file_components {SECURITY FABRIC} \ 
- include_plaintext_passkey 1
```

**RTG4**
```
export_prog_job \
- job_file_name {top} \ 
- export_dir {X:\10_docs_review\12.0_Release\102018\rtg4_ff_usram\designer\top\export} \ 
- force_rtg4_otp 10 \ 
```

**export_sdc_file**

Tcl command to export the SDC (Synopsys Design Constraint) file for timing constraints. The exported file has a *.sdc file name extension.
```
export_sdc_file
- file {absolute path and name of *.sdc file}
```
**Arguments**

- `file {absolute path and name of *.sdc file}`
  Specifies the SDC file to export.

**Returns**

Returns 0 on success, 1 on failure.

**Supported Families**

SmartFusion2, IGLOO2, RTG4

**Example**

```bash
export_sdc_file \
-file {E:/designs/export/sd1.sdc}
```

---

**generate_component**

Tcl command; generates a SmartDesign or a core component.

```bash
generate_component \
-component_name component_name \
[-recursive 0|1]
```

**Arguments**

- `component_name component_name`
  Specifies the name of the SmartDesign component or the core component to be generated. It is mandatory.
- `-recursive 0|1`
  Specifies if a SmartDesign component needs to be generated recursively. It is optional. It is ‘0’ by default and generates only the specified component. If set to ‘1’, all the dependent components which are in ungenerated state will be generated along with the SmartDesign component. It is recommended to generate all components individually.

**Examples**

The following command generates SmartDesign "sd2" only.

```bash
generate_component -component_name {sd2}
```

The following command generates SmartDesign "TOP" and all its dependent components which are in ungenerated state.

```bash
generate_component -component_name {TOP} -recursive 1
```

**See Also**

---

**generate_sdc_constraint_coverage**

Tcl command to generate the constraint coverage report. The constraint coverage report contains information about the coverage of the paths from associated SDC constraints in the design. Two constraints coverage reports can be generated, one for Place and Route and one for Timing Verification.

This command is available for the Enhanced Constraint Flow only. To run this command, there is no need to run Place-and-Route first, but the design must be in the post-synthesis state. The generated constraint coverage
generate_sdc_constraint_coverage -tool {PLACEROUTE | VERIFYTIMING}

**Arguments**
- `-tool` `{PLACEROUTE|VERIFYTIMING}`
  Specifies whether the constraint coverage report is based on the SDC constraint file associated with Place and Route or associated with Timing Verification.

**Returns**
- Returns 0 on success, 1 on failure.

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4

**Example**
- This command generates the SDC Constraint Coverage report for the SDC file associated with Place and Route:
  ```
  generate_sdc_constraint_coverage -tool {PLACEROUTE}
  ```
- This command generates the SDC Constraint Coverage report for the SDC file associated with Timing Verification:
  ```
  generate_sdc_constraint_coverage -tool {VERIFYTIMING}
  ```

**See Also**
- Understanding Constraints Coverage Reports

**get_libero_release**
- This Tcl command returns the release number of the Libero SoC release. The value that is returned is the same as the release number that is displayed in the Help > About Libero Window.

**Arguments**
- None

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4

**Example**
- ```
  get_libero_release
  ```
  #save into a variable
  set var1 [get_libero_release]
  #display the variable
puts "Libero Release is $var1"

Output
You will see output similar to this:

Libero Release is v11.9

get_libero_version
This Tcl command returns the version number of the Libero SoC version. The value that is returned is the same as the version number that is displayed in the Help > About Libero Window.

Arguments
None

Supported Families
SmartFusion2
IGLOO2
RTG4

Example

```
get_libero_version
#save into a variable
set var2 [get_libero_version]
#display variable
puts "Libero Version is $var2"
```

Output
You will see output similar to the following:

Libero Version is 11.9.0.4

import_component
This Tcl command imports a component *.cxf file into the Libero project. After import, the .cxf file is placed in the <project_folder>/component/work/<component_name> folder.

Arguments
- file <path_to_component *.cxf file>
The -file argument specifies the location of the component *.cxf file to import. Both absolute and relative paths are supported.

Supported Families
SmartFusion2, IGLOO2, RTG4
Example

```tcl
import_component -file {D:/test/my_design/my_mult.cxf}
```

See Also

- `import_component_data`
- `generate_component`

**import_component_data**

A Libero SoC general-purpose Tcl command to import component data into an existing Libero project.

Component refers to MDDR, FDDR and SERDES peripherals in SmartFusion2 devices. Component Data refers to initialization/configuration register values (*init_reg or *init.mem files) of those peripherals. Use this command if and when:

- The synthesized netlist or HDL files in the existing Libero SoC project contains no component (MDDR, FDDR and SERDES) information AND
- You want to add components (MDDR, FDDR or SERDES) into the existing design.

**import_component_data**

- `module root` # name of the top_level (root)
- `fddr file_path_and_name` # has to be FDDR_init.reg or .mem
- `mddr file_path_and_name` # has to be MDDR_init.reg or .mem
- `serdes0 file_path_and_name` # has to be SERDESIF_0_init.reg or .mem
- `serdes1 file_path_and_name` # has to be SERDESIF_1_init.reg or .mem
- `serdes2 file_path_and_name` # has to be SERDESIF_2_init.reg or .mem
- `serdes3 file_path_and_name` # has to be SERDESIF_3_init.reg or .mem
- `eNVM_cfg file_path_and_name` # SmartFusion2, IGLOO2 only
- `uprom_cfg file_path_and_name` # RTG4 only

**Note:** The eNVM config file can have any name.

**Note:** Either * _init.reg (register configuration file) or *.mem files (memory files) can be used. The two cannot be mixed in the same import_component_data command.

**Supported Families**

SmartFusion2, IGLOO2, RTG4

**Example**

The component name for IGLOO2 devices may have different file extension (*.mem or *.reg), depending on the Libero SoC release version used to generate the components.

The following is an example of importing design components created with a Libero SoC pre-v11.4 release into an IGLOO2 project.

```tcl
import_component_data \
-module <root> \
-fddr <file_path>/FDDR_init.mem \
-mddr <file_path>/MDDR_init.mem \
-serdes0 <file_path>/SERDESIF_0_init.mem \
-serdes1 <file_path>/SERDESIF_1_init.mem \
-serdes2 <file_path>/SERDESIF_2_init.mem \
-serdes3 <file_path>/SERDESIF_3_init.mem \
-eNVM_cfg <user_cfg_filepath>
```

The following is an example of importing design components created with Libero SoC v11.4 or subsequent releases into an IGLOO2 project. Note the *.reg file extension.

```tcl
import_component_data
```
The following is an example of importing design components created with a Libero SoC pre-v11.4 release into a SmartFusion2 project.

```
import_component_data \
-module <root> \n-fddr <file_path>/FDDR_init.reg \n-mddr <file_path>/MDDR_init.reg \n-serdes0 <file_path>/SERDESIF_0_init.reg \n-serdes1 <file_path>/SERDESIF_1_init.reg \n-serdes2 <file_path>/SERDESIF_2_init.reg \n-serdes3 <file_path>/SERDESIF_3_init.reg
```

The following is an example of importing design components created with Libero SoC v11.4 or a subsequent release into a SmartFusion2 project.

```
import_component_data \
-module <root> \n-envm_cfg <user_cfg_file_path>
```

### Return Value

Returns 0 on success and 1 on failure.

### loopback_test

Tcl command; used to start and stop the loopback tests.

```
loopback_test [-deviceName device_name] -start -serdes num -lane num -type LoopbackType
loopback_test [-deviceName device_name] -stop -serdes num -lane num
```

### Arguments

- **-deviceName device_name**
  Parameter is optional if only one device is available in the current configuration or set for debug (see the SmartDebug User's Guide for details).

- **-start**
  Starts the loopback test.

- **-stop**
  Stops the loopback test.

- **-serdes num**
  Serdes block number. Must be between 0 and 4 and varies between dies.

- **-lane num**
  Serdes lane number. Must be between 0 and 4

- **-type LoopbackType**
  Specifies the loopback test type. Must be meso (PCS Far End PMA RX to TX Loopback)
Supported Families
SmartFusion2, IGLOO2, RTG4

Example
loopback_test -start -serdes 1 -lane 1 -type meso
loopback_test -start -serdes 0 -lane 0 -type plesio
loopback_test -start -serdes 1 -lane 2 -type parallel
loopback_test -stop -serdes 1 -lane 2

open_smartdesign
Tcl command; opens a SmartDesign. You must either open or create a SmartDesign before using any of the SmartDesign specific commands "sd_*".

Arguments
- sd_name smartdesign_component_name
  Specifies the name of the SmartDesign component to be opened. It is mandatory.

Examples
open_smartdesign -sd_name {top}

Notes
This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.

See Also
Tcl Command Documentation Conventions

organize_tool_files
This Tcl command is used to specify specific constraint files to be passed to and used by a Libero tool.

Arguments
- tool {tool_name}
  Specifies the name of the tool files you want to organize. Valid values are:
  SYNTHESIZE | PLACEROUTE | SIM_PRESYNTH | SIM_POSTSYNTH | SIM_POSTLAYOUT | VERIFYTIMING
- file {<absolute or relative path to constraint file>}
  Specifies the absolute or relative path to the constraint file; there may be multiple -file arguments (see example below).
Module definition, format is <$design::work>.

Specifies type of input file. Possible values are: constraint | source | simulation | stimulus | unknown

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Example**

The following command organizes the test_derived.sdc and user.sdc files of SDC file type for the tool VERIFYTIMING for the sd1: work design.

```tcl
organize_tool_files \
-tool {VERIFYTIMING} \
-file {D:/Designs/my_proj/constraints/test_derived.sdc} \
-file {D:/Designs/my_proj/constraints/user.sdc} \
-module {sd1::work} \
-input_type {constraint}
```

**prbs_test**

Tcl command; used in PRBS test to start, stop, reset the error counter and read the error counter value.

```tcl
prbs_test [-deviceName device_name] -start -serdes num -lane num [-near] -pattern PatternType
prbs_test [-deviceName device_name] -stop -serdes num -lane num
prbs_test [-deviceName device_name] -reset_counter -serdes num -lane num
prbs_test [-deviceName device_name] -read_counter -serdes num -lane num
```

**Arguments**

- **-deviceName device_name**
  Parameter is optional if only one device is available in the current configuration or set for debug (see the SmartDebug User's Guide for details).
- **-start**
  Starts the prbs test.
- **-stop**
  Stops the prbs test.
- **-reset_counter**
  Resets the prbs error count value to 0.
- **-read_counter**
  Reads and prints the error count value.
- **-serdes num**
  Serdes block number. Must be between 0 and 4 and varies between dies.
- **-lane num**
  Serdes lane number. Must be between 0 and 4.
- **-near**
  Corresponds to near-end (on-die) option for prbs test. Not specifying implies off-die.
- **-pattern PatternType**
  The pattern sequence to use for PRBS test. It can be one of the following:
Supported Families
SmartFusion2, IGLOO2, RTG4

Example

```
prbs_test -start -serdes 1 -lane 0 -near -pattern prbs11
prbs_test -start -serdes 2 -lane 2 -pattern custom -value all_zeros
prbs_test -start -serdes 0 -lane 1 -near -pattern user -value 0x0123456789ABCDEF0123
```

rename_file

This Tcl command renames a constraint file specified by the -file parameter to a different name specified by the -target parameter.

```
rename_file -file {filename} -target {new_filename}
```

Arguments

- `-file {filename}`
  Specifies the original name of the file.
- `-target {new_filename}`
  Specifies the new name of the file.

Supported Families
SmartFusion2
IGLOO2
RTG4

Example

This command renames the file `a.sdc` to `b.sdc`.

```
rename_file -file {c:/user/a.sdc} -target {c:/user/b.sdc}
```

Return Value

This command returns 0 on success and 1 on failure.

run_tool

run_tool starts the specified tool. For tools that support command files, an optional command file can be supplied through the -script parameter.

```
run_tool
-name {<tool_name>}
-script {<absolute or relative path to script file>}
```

-tool_name ::= SYNTHESIZE | COMPILE | SIM_PRESYNTH | SIM_POSTSYNTH | PLACEROUTE | VERIFYIMAGING | VERIFYPOWER | GENERATEPROGRAMMINGFILE | GENERATE_MEMORY_MAP | PROGRAMDEVICE | CONFIGURE_CHAIN | SMARTDEBUG | SSNANALYZER | UPDATE_ENVM | UPDATE_UPROM |
Return

run_tool returns 0 on success and 1 on failure.

Supported tool_names

The following table lists tool_names for run_tool –name {tool_name}.

<table>
<thead>
<tr>
<th>tool_name</th>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SYNTHESIZE</td>
<td>-script</td>
<td>Runs synthesis on your design.</td>
</tr>
<tr>
<td></td>
<td>{script_file}</td>
<td></td>
</tr>
<tr>
<td>COMPIL E</td>
<td>N/A</td>
<td>Runs Compile with default or configured settings.</td>
</tr>
<tr>
<td>SIM_PRESYNTH</td>
<td>N/A</td>
<td>Runs pre-synthesis simulation with your default simulation tool.</td>
</tr>
<tr>
<td>SIM_POSTSYNTH</td>
<td>N/A</td>
<td>Runs post-synthesis simulation with your default simulation tool.</td>
</tr>
<tr>
<td>PLACEROUTE</td>
<td>N/A</td>
<td>Runs Layout with default or configured settings.</td>
</tr>
<tr>
<td>VERIFYTIMING</td>
<td>-script</td>
<td>Runs timing analysis with default settings/configured settings in script_file.</td>
</tr>
<tr>
<td></td>
<td>{script_file}</td>
<td></td>
</tr>
<tr>
<td>VERIFYPOWER</td>
<td>-script</td>
<td>Runs power analysis with default settings/configured settings in script_file.</td>
</tr>
<tr>
<td></td>
<td>{script_file}</td>
<td></td>
</tr>
<tr>
<td>GENERATEPRGAMMINGFILE</td>
<td>N/A</td>
<td>Generates the bitstream used for programming within Libero.</td>
</tr>
<tr>
<td>GENERATE_MEMORY_MAP</td>
<td>N/A</td>
<td>Exports an XML file in &lt;prj_folder&gt; component/work/&lt;design&gt; /&lt;design&gt;_DataSheet.xml. The file contains information about your root SmartDesign in your project.</td>
</tr>
<tr>
<td>PROGRAMDEVICE</td>
<td>N/A</td>
<td>Programs your device with configured parameters.</td>
</tr>
<tr>
<td>CONFIGURE_CHAIN</td>
<td>-script</td>
<td>Takes a script that contains FlashPro-specific Tcl commands and passes them to FlashPro Express for execution.</td>
</tr>
<tr>
<td></td>
<td>{script_file}</td>
<td></td>
</tr>
<tr>
<td>SMARTDEBUG</td>
<td>-script</td>
<td>Takes a script that contains SmartDebug-specific Tcl commands and passes them to SmartDebug for execution.</td>
</tr>
<tr>
<td></td>
<td>{script_file}</td>
<td></td>
</tr>
<tr>
<td>SSNANALYZER</td>
<td>-script</td>
<td>Takes a script that contains Simultaneous Switching Noise (SSN)-specific Tcl commands and passes them to the SSN tool for execution.</td>
</tr>
<tr>
<td></td>
<td>{script_file}</td>
<td>Simultaneous Switching Noise (SSN) is a Libero SoC tool that analyzes and generates a Noise Margin report for I/Os after layout.</td>
</tr>
</tbody>
</table>
# Libero SoC Tcl Commands Reference Guide

## Supported Families
- SmartFusion2
- IGLOO2
- RTG4

## Example

```
run_tool 
  -name {COMPILE}
run_tool 
  -name {SYNTHESIZE} -script {./control_synopsys.tcl}
  # control_synopsys.tcl contains the synthesis-specific Tcl commands
run_tool 
  -name {VERIFYTIMING} 
  -script {./SmartTime.tcl}
  # Script file contains SmartTime-specific Tcl commands
run_tool 
  -name {VERIFYPOWER} 
  -script {./SmartPower.tcl}
  # Script file contains SmartPower-specific Tcl commands
run_tool 
  -name {SMARTDEBUG} 
  -script {./sd_test.tcl}
  # Script file contains SmartDebug-specific Tcl commands
run_tool 
  -name {SSNANALYZER} 
  -script {<full_path>/ssn.tcl}
  # Script file contains the SSN-specific Tcl commands
```

## Note
Where possible, the value of `tool_name` corresponds to the name of the tool in Libero SoC.
Invoking some tools will cause Libero SoC to automatically run some upstream tools in the design flow. For example, invoking Place and Route will invoke Synthesis (if not already run) before it runs Place and Route.

<table>
<thead>
<tr>
<th>tool_name</th>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>UPDATE_ENVM</strong> (SmartFusion2 and IGLOO2 only)</td>
<td>-script <code>update_co[nfig_file]</code></td>
<td>Takes a script file that updates the client(s) in the ENVM. In the script file, the client(s) to be updated may be a serialization client or a data storage client or a mix of serialization clients and data storage clients.</td>
</tr>
<tr>
<td><strong>UPDATE_UPROM</strong> (RTG4 Only)</td>
<td>-script <code>update_co[nfig_file]</code></td>
<td>Takes a script that updates the data storage client(s) in RTG4 UPROMs.</td>
</tr>
</tbody>
</table>

-script `{absolute or relative path to script file}`

Script file location.
save_smartdesign

Tcl command; saves all the changes made in a SmartDesign component.

```
save_smartdesign \
    -sd_name {smartdesign_component_name}
```

Arguments

- **-sd_name {smartdesign_component_name}**
  Specifies the name of the SmartDesign component to be saved. It is mandatory.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Examples

```
save_smartdesign -sd_name {top}
```

See Also

- [Tcl Command Documentation Conventions](#)

select_libero_design_device

This command selects the Libero design device for the Programming Connectivity and Interface tool within Libero. This command is needed when the tool cannot automatically resolve the Libero design device when there are two or more identical devices that match the Libero design device in the configured JTAG chain.

Syntax

```
select_libero_design_device -name {device_name}
```

Arguments

- **-name {device_name}**
  Specifies a user-assigned unique device name in the JTAG chain.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Exceptions

- None

Example

```
select_libero_design_device -name {M2S050TS (2)}
select_libero_design_device -name {my_design_device}
```
Note

This Tcl command is typically used in a Tcl command script file that is passed to the Libero run_tool command.

```
run_tool -name {CONFIGURE_CHAIN} -script {<flashPro_cmd>.tcl}
```

set_as_target

This Tcl command sets a SDC, PDC or FDC file as the target file to receive and store new constraints.

```
set_as_target -type {constraint_file_type} \\
-file {constraint_file_path}
```

Arguments

- **-type** {sdc | pdc | fdc}
  Specifies the file type: SDC, PDC, or FDC.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Example

This command sets the SDC file `<project_folder> /constraints/user.sdc` as the target to receive and store new SDC commands.

```
set_as_target -type {sdc} -file {./constraint/user.sdc}
```

This command sets the PDC file `<project_folder> /constraints/user.pdc` as the target to receive and store new PDC commands.

```
set_as_target -type {pdc} -file {./constraint/user.pdc}
```

Return Value

This command returns 0 on success and 1 on failure.

set_live_probe

Tcl command; set_live_probe channels A and/or B to the specified probe point(s). At least one probe point must be specified. Only exact probe name is allowed (i.e. no search pattern that may return multiple points).

```
set_live_probe [-deviceName device_name] [-probeA probe_name] [-probeB probe_name]
```

Arguments

- **-deviceName** device_name
  Parameter is optional if only one device is available in the current configuration or set for debug (see SmartDebug user guide for details).
- **-probeA** probe_name
  Specifies target probe point for the probe channel A.
- **-probeB** probe_name
  Specifies target probe point for the probe channel B.

Supported Families

- SmartFusion2
IGLOO2
RTG4

Exceptions

- The array must be programmed and active
- Active probe read or write operation will affect current settings of Live probe since they use same probe circuitry inside the device
- Setting only one Live probe channel affects the other one, so if both channels need to be set, they must be set from the same call to set_live_probe
- Security locks may disable this function
- In order to be available for Live probe, ProbeA and ProbeB I/O's must be reserved for Live probe respectively

Example

Sets the Live probe channel A to the probe point A12 on device sf2.

```
set_live_probe [-deviceName sf2] [-probeA A12]
```

unset_as_target

This Tcl command unsets a target file in the Constraints view.

```
unset_as_target -file {filename}
```

Arguments

- `file {filename}`
  Specifies the name of the file to be unset as a target.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Example

This command unsets the PDC file `<project_folder>/constraints/user.pdc`:

```
unset_as_target -file {c:/user/a_io.pdc}
```

Return Value

This command returns 0 on success and 1 on failure.
**SmartDesign Tcl Commands**

The SmartDesign Tcl commands can be used to create a design in the SmartDesign. You must either create or open a SmartDesign before you can use any of the SmartDesign commands - `sd_*`. All SmartDesign Tcl commands are supported by the SmartFusion2, IGLOO2 and RTG4 families.

### sd_add_pins_to_group

Tcl command; adds one or more pins to a pin group on an instance in a SmartDesign component.

```
sd_add_pins_to_group
  -sd_name smartdesign_component_name
  -instance_name instance_name
  -group_name group_name
  -pin_names pin_names
```

**Arguments**

- `-sd_name smartdesign_component_name`
  Specifies the name of the SmartDesign component. It is mandatory.
- `-instance_name instance_name`
  Specifies the name of the instance on which the pin group is present. It is mandatory.
- `-group_name group_name`
  Specifies the name of the group to add the pins to. It is mandatory.
- `-pin_names pin_names`
  Specifies the list of instance pins to be added to the pin group. It is mandatory.

**Examples**

```
sd_add_pins_to_group -sd_name {TOP} -instance_name {COREAXI4INTERCONNECT_C0_0} -group_name {Group} -pin_names {ARESETN ACLK}
```

**See Also**

[Tcl Command Documentation Conventions](#)

### sd_clear_pin_attributes

Tcl command; clears all attributes on one or more pins/ports in a SmartDesign. Pin attributes include pin inversion, mark as unused and constant value settings.

```
sd_clear_pin_attributes
  -sd_name smartdesign_component_name
  -pin_names port_or_pin_names
```

**Arguments**

- `-sd_name smartdesign_component_name`
  Specifies the name of the SmartDesign component. It is mandatory.
- `-pin_names port_or_pin_names`
  Specifies the name of the port/pin for which all attributes must be cleared. It is mandatory.
Examples

sd_clear_pin_attributes -sd_name {sd1} -pin_names {RAM1K18_0:A_DOUT_CLK}
sd_clear_pin_attributes -sd_name {top} -pin_names {CARRY_OUT}

Notes

This command will not work on multiple pins/ports in this release. Support for multiple pins/ports will be provided in the next Libero release. This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.

Tcl Command Documentation Conventions

sd_configure_core_instance

Tcl command; configures the parameters of a core instance (Direct Instantiation) in a SmartDesign component. This command is typically used after instantiating a core from the catalog directly into a SmartDesign component (Direct Instantiation) without first creating a component for the core (using sd_instantiate_core). This command can configure multiple core parameters at a time.

```
sd_configure_core_instance \
-sd_name smartdesign_component_name \
-instance_name core_instance_name \
-params core_parameters \
[-validate_rules 0|1]
```

Arguments

- `-sd_name smartdesign_component_name`
  Specifies the name of the SmartDesign component. It is mandatory.
- `-instance_name instance_name`
  Specifies the name of the core instance in the SmartDesign which needs to be configured. It is mandatory.
- `-params core_parameters`
  Specifies the parameters that need to be configured for the core instance. It is mandatory.
- `-validate_rules 0|1`
  Validates the rules of the updated configuration. It is optional.

Examples

```
sd_configure_core_instance -sd_name {SD1} -instance_name {COREFIFO_0} -params {"SYNC:0" "param2:value2" "param3:value3"} -validate_rules 0
```

Tcl Command Documentation Conventions

sd_connect_instance_pins_to_ports

Tcl command; connects all pins of an instance to new SmartDesign top level ports.

```
sd_connect_instance_pins_to_ports \
-sd_name smartdesign_component_name \
-instance_name instance_name
```
**Arguments**

- **-sd_name smartdesign_component_name**
  Specifies the name of the SmartDesign component. It is mandatory.

- **-instance_name instance_name**
  Specifies the name for which all the pins must be connected to top level ports. It is mandatory. The instance pins are connected to new top level ports created with the same instance pin names. If a top level port with the same name already exists, then the tool automatically creates a new port with name `<port_name>_index` (index is an automatically generated integer starting at 0 such that the port name is unique in the SmartDesign).

**Examples**

```tcl
sd_connect_instance_pins_to_ports -sd_name {top} -instance_name {CORESPI_C0_0}
sd_connect_instance_pins_to_ports -sd_name {top} -instance_name {ddr_out_0}
```

**Notes**

This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.

**See Also**

[ Tcl Command Documentation Conventions ]

---

**sd_connect_pins_to_constant**

Tcl command; connects SmartDesign top level output ports or input instance pins to constant values.

```tcl
sd_connect_pins_to_constant -sd_name smartdesign_component_name -pin_names port_or_pin_names -value constant_value
```

**Arguments**

- **-sd_name smartdesign_component_name**
  Specifies the name of the SmartDesign component. It is mandatory.

- **-pin_names port_or_pin_names**
  Specifies the names of the top level output ports or the instance level input pins to be tied to constant values. It is mandatory. Bus pins/ports and pin/port slices can also be tied to constant values. This command will fail if the specified port/pin does not exist. The command will also fail if the assigned object is a port of direction IN/INOUT or a pin of direction OUT/INOUT.

- **-value constant_value**
  Specifies the constant value to be assigned to the port/pin. It is mandatory. The acceptable values to this argument are GND/VCC/hexadecimal numbers.

**Examples**

```tcl
sd_connect_pins_to_constant -sd_name {top} -pin_name {bypass} -value {GND}
sd_connect_pins_to_constant -sd_name {top} -pin_name {sle_0:en} -value {VCC}
sd_connect_pins_to_constant -sd_name {top} -pin_name {ram64x12_0:w_data} -value {0x7f}
```
Notes
This command will not work on multiple pins/ports in this release. Support for multiple pins/ports will be provided in the next Libero release.

See Also
Tcl Command Documentation Conventions

sd_connect_pin_to_port
Tcl command; connects a SmartDesign instance pin to a new top level port. This command is equivalent to the ‘Promote to Top Level’ GUI action on an instance pin.

```
.sd_connect_pin_to_port
  -sd_name  smartdesign_component_name
  -pin_name  pin_name
  [-port_name  port_name]
```

Arguments
- **-sd_name**  *smartdesign_component_name*
  Specifies the name of the SmartDesign component. It is mandatory.
- **-pin_name**  *pin_name*
  Specifies the name of the instance level pin that needs to be connected to a top level port. It is mandatory.
- **-port_name**  *port_name*
  Specifies the name of the new top level port that the instance pin will be connected to. It is optional. If the port name is not specified, the new port takes the name of the instance pin. If the port name as defined by these rules already exists, the tool automatically creates a new port with name <port_name>_<index> (index is an automatically generated integer starting at 0 such that the port name is unique in the SmartDesign).

Examples
```
  sd_connect_pin_to_port -sd_name {top} -pin_name {DFN1_0:D}
  sd_connect_pin_to_port -sd_name {top} -pin_name {DFN1_0:Q} -port_name {Q_OUT}
```

Notes
This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.

See Also
Tcl Command Documentation Conventions

sd_connect_pins
Tcl command; connects a list of SmartDesign top level ports and/or instance pins together.

```
.sd_connect_pins
  -sd_name  smartdesign_component_name
  -pin_names  port_or_pin_or_slice_names
```

Arguments
- **-sd_name**  *smartdesign_component_name*
Specifies the name of the SmartDesign component. It is mandatory.

-\texttt{pin\_names} \texttt{port\_or\_pin\_or\_slice\_names}

Specifies the port names, pin names and/or slice names to be connected together. It is mandatory. This command will fail if the ports, pins or slices do not exist. This command will also fail if the ports, pins and/or slices are not of the same size/range.

**Examples**

\begin{verbatim}
sd_connect_pins -sd_name {top} -pin_names {CLK MACC_PA_0:CLK DFN1_0:CLK}
sd_connect_pins -sd_name {top} -pin_names {MACC_PA_0:A RAM1K20_0:A_DIN[17:0]}
\end{verbatim}

**See Also**

[Tcl Command Documentation Conventions]

\textbf{sd\_create\_bif\_port}

Tcl command; creates a SmartDesign Bus Interface port of a given type. This command is used to create top level Bus Interface ports in a SmartDesign component to connect to the instance level Bus Interface ports of the same type.

To use this command, it is recommended to first use the GUI to instantiate the core component or the HDL module with Bus Interface port to be promoted in the SmartDesign. Then use the UI action "Promote to Top Level" on the Bus Interface port of interest and export the Tcl script for the SmartDesign component by selecting "Export Component Description(Tcl)" on the right-click menu of the SmartDesign component in the Design Hierarchy. You can then use the Tcl command \texttt{sd\_create\_bif\_port} from the exported Tcl script (note to change the SmartDesign name in the command) to create a bus interface port anywhere in a regular Libero script. Note that there can be different Bus Interface types and roles defined by the arguments \texttt{-port\_bif\_vlnv} and \texttt{-port\_bif\_role}.

\begin{verbatim}
\texttt{sd\_create\_bif\_port} \texttt{\backslash}
\texttt{-sd\_name} \texttt{smartdesign\_component\_name} \texttt{\backslash}
\texttt{-port\_name} \texttt{port\_name} \texttt{\backslash}
\texttt{-port\_bif\_vlnv} \texttt{vendor:library:name:version} \texttt{\backslash}
\texttt{-port\_bif\_role} \texttt{port\_bif\_role} \texttt{\backslash}
\texttt{-port\_bif\_mapping} \texttt{[bif\_port\_name:port\_name]+}
\end{verbatim}

**Arguments**

-\texttt{-sd\_name} \texttt{smartdesign\_component\_name}

  Specifies the name of the SmartDesign component. It is mandatory.

-\texttt{-port\_name} \texttt{port\_name}

  Specifies the name of the Bus Interface port to be added in the SmartDesign. It is mandatory.

-\texttt{port\_bif\_vlnv} \texttt{vendor:library:name:version}

  Specifies the version identifier of the Bus Interface port to be added in the SmartDesign. It is mandatory.

-\texttt{-port\_bif\_role} \texttt{port\_bif\_role}

  Specifies the role of the Bus Interface port to be added in the SmartDesign. Role values depend on the type of Bus Interface (VLNV) that is being defined for the port. The figure below shows the roles for different Bus Interface ports supported by Libero.
port_bif_mapping {[bif_port_name:port_name ]+}

Specifies the mapping between the bus interface formal names and the SmartDesign ports mapped onto that bus interface port. It is mandatory.

### Examples

```tcl
sd_create_bif_port -sd_name {sd1} -port_name {BIF_1} -port_bif_vlnv {AMBA:AMBA2:APB:r0p0} -port_bif_role {slave} -port_bif_mapping {
  "PADDR:PADDR"
  "PSELx:pselx"
  "PENABLE:PENABLE"
  "PWRITE:PWRITE"
  "PRDATA:PRDATA"
  "PWDATA:PDATA"
  "PREADY:PREADY"
  "PSLVERR:PSLVERR"
}
```

### See Also

Tcl Command Documentation Conventions
sd_create_bus_port

Tcl command; creates a bus port of a given range in a SmartDesign component.

```
sd_create_bus_port \
-sd_name smartdesign_component_name \
-port_name port_name \-port_direction IN|OUT|INOUT \
-port_range {[left_range_index:right_range_index]}
```

Arguments

- `sd_name smartdesign_component_name` 
  Specifies the name of the SmartDesign component. It is mandatory.
- `port_name` 
  Specifies the name of the bus port added to be SmartDesign component. It is mandatory.
- `port_direction IN|OUT|INOUT` 
  Specifies the direction of the bus port added to the SmartDesign component. It is mandatory.
- `port_range {[left_range_index:right_range_index]}` 
  Specifies the range of the bus port added to the SmartDesign component. The range is defined by the left and right indices. It is mandatory. The range must be specified inside the square brackets.

Examples

```
sd_create_bus_port -sd_name {top} -port_name {test_port13} -port_direction {OUT} -port_range {[9:36]}
sd_create_bus_port -sd_name {top} -port_name {test_port4} -port_direction {IN} -port_range {[31:0]}
```

See Also

Tcl Command Documentation Conventions

sd_create_pin_group

Tcl command; creates a group of pins in a SmartDesign component. A pin group is only used to manage the complexity of the SmartDesign canvas. There is no actual netlist functionality related to pin group commands. Pin groups cannot be created for top level ports.

```
sd_create_pin_group \
-sd_name smartdesign_component_name \
-instance_name instance_name \
[-group_name group_name] \
[-pin_names pin_to_be_added_to_the_group]
```

Arguments

- `sd_name smartdesign_component_name` 
  Specifies the name of the SmartDesign component. It is mandatory.
- `instance_name` 
  Specifies the name of the instance on which the pin group is added. It is mandatory.
- `group_name` 
  Specifies the name of the pin group. It is optional. If the group name is not specified, the default name will be ‘Group’. If the name ‘Group’ is already taken, then the group name will be ‘Group_<index>’ (index is auto-incremented).
- `pin_names pins_to_be_added_to_the_group` 
  Specifies the list of instance pins to be added to the pin group. It is optional.
Examples
sd_create_pin_group -sd_name {TOP} -instance_name
{COREAXI4INTERCONNECT_C0_0} -group_name {MyGroup} -pin_names {ACLK
ARESETN}

See Also
Tcl Command Documentation Conventions

sd_create_pin_slices
Tcl command; creates slices for a SmartDesign top level bus port or an instance level bus pin.

sd_create_pin_slices
- sd_name smartdesign_component_name
- pin_name port_or_pin_name
- pin_slices port_or_pin_slices

Arguments
- sd_name smartdesign_component_name
  Specifies the name of the SmartDesign component. It is mandatory.
- pin_name port_or_pin_name
  Specifies the name of the bus port or bus pin to be sliced. It is mandatory. This command will fail if the port/pin is scalar or if the bus port/pin does not exist.
- pin_slices port_or_pin_slices
  Specifies the port/pin slices as a list of bus ranges which must be contained within the port/pin bus range. It is mandatory. This command will fail if the sliced object is top level OUT/INOUT port and the slice ranges overlap. This command will also fail if the sliced object is an instance level IN/INOUT pin and the slice ranges overlap.

Examples
sd_create_pin_slices -sd_name {sub} -pin_name {Rdata} -pin_slices {[4:3] [2:0]} # top level port slicing
sd_create_pin_slices -sd_name {sub} -pin_name {DDR_memory_arbiter_C0_0:VIDEO_RDATA_4_O} -pin_slices {[3:3] [2:0]} # instance level pin slicing

Tcl Command Documentation Conventions

sd_create_scalar_port
Tcl command; creates a scalar port in a SmartDesign component.

sd_create_scalar_port
- sd_name smartdesign_component_name
- port_name port_name
- port_direction IN|OUT|INOUT

Arguments
- sd_name smartdesign_component_name
  Specifies the name of the SmartDesign component. It is mandatory.
- port_name port_name
  Specifies the name of the port added to the SmartDesign component. It is mandatory.
- port_direction IN|OUT|INOUT
Specifies the direction of the port added to the SmartDesign component. It is mandatory.

**Examples**

```
sd_create_scalar_port -sd_name {main} -port_name {po2} -port_direction {INOUT}
```

**See Also**

*Tcl Command Documentation Conventions*

---

### sd_delete_instances

Tcl command; deletes one or more instances from a SmartDesign component.

```
sd_delete_instances \\
  -sd_name smartdesign_component_name \\
  -instance_names instance_names
```

**Arguments**

```
  -sd_name smartdesign_component_name
  Specifies the name of the SmartDesign component. It is mandatory.
  -instance_names instance_names
  Specifies the instance names to be deleted. It is mandatory.
```

**Examples**

```
sd_delete_instances -sd_name {top} -instance_names {RAM64X12_0}
sd_delete_instances -sd_name {SUB} -instance_names {coreahblite_c0_0 coreriscv_axi4_c0_0 pf_ccc_c0_0}
```

**Notes**

This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.

**See Also**

*Tcl Command Documentation Conventions*

---

### sd_delete_nets

Tcl command; deletes one or more nets from the SmartDesign component.

```
sd_delete_nets \\
  -sd_name smartdesign_component_name \\
  -net_names net_names
```

**Arguments**

```
  -sd_name smartdesign_component_name
  Specifies the name of the SmartDesign component. It is mandatory.
  -net_names net_names
  Specifies the net names to be deleted. It is mandatory.
```

**Examples**

```
sd_delete_nets -sd_name {top} -net_names {B_REN_0}
```
Notes

This command will not delete multiple nets in this release. Support for deleting multiple nets will be provided in the next Libero release. This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.

See Also
Tcl Command Documentation Conventions

sd_delete_pin_group

Tcl command; deletes a pin group from an instance in a SmartDesign component.

```
sd_delete_pin_group \
  -sd_name smartdesign_component_name \
  -instance_name instance_name \
  -group_name group_name
```

Arguments

- `-sd_name smartdesign_component_name`
  Specifies the name of the SmartDesign component. It is mandatory.
- `-group_name group_name`
  Specifies the name of the pin group to be deleted. It is mandatory.
- `-instance_name instance_name`
  Specifies the name of the instance from which the group pin needs to be deleted. It is mandatory.

Examples

```
sd_delete_pin_group -sd_name {TOP} -instance_name {COREAXI4INTERCONNECT_C0_0} -group_name {Group}
```

See Also
Tcl Command Documentation Conventions

sd_delete_pin_slices

Tcl command; deletes SmartDesign top level port slices or instance pin slices.

```
sd_create_pin_slices \n  -sd_name smartdesign_component_name \n  -pin_name port_or_pin_name \n  -pin_slices port_or_pin_slices
```

Arguments

- `-sd_name smartdesign_component_name`
  Specifies the name of the SmartDesign component. It is mandatory.
- `-pin_name port_or_pin_name`
  Specifies the name of the bus port or bus pin for which the slices must be deleted. It is mandatory.
- `-pin_slices port_or_pin_slices`
  Specifies the ranges of the port and/or pin slices to be deleted. It is mandatory.
Examples

sd_delete_pin_slices -sd_name {top} -pin_name {MACC_pa_0:p} -pin_slices {{21} {13} {28}} # deletes instance pin slices
sd_delete_pin_slices -sd_name {top} -pin_name {A} -pin_slices {{17:16} {15:1} {0}} # deletes top level port slices

Notes
This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.

See Also
Tcl Command Documentation Conventions

sd_delete_ports
Tcl command; deletes one or more ports from the SmartDesign component.

Arguments

- sd_name smartdesign_component_name
  Specifies the name of the SmartDesign component. It is mandatory.
- port_names port_names
  Specifies the names of the ports to be deleted. It is mandatory.

Examples

sd_delete_ports -sd_name {sd1} -port_names {REF_CLK_0}

Notes
This command will not work on multiple ports in this release. Support for multiple ports will be provided in the next Libero release. This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.

See Also
Tcl Command Documentation Conventions

sd_disconnect_instance
Tcl command; clears all the connections on an instance in a SmartDesign component.

Arguments

- sd_name smartdesign_component_name
  Specifies the name of the SmartDesign component. It is mandatory.
-instance_name instance_name

Specifies the name of the instance for which all the connections must be cleared. It is mandatory.

Examples

sd_disconnect_instance -sd_name {sd1} -instance_name {RAM1K18_1}

Notes

This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.

See Also

Tcl Command Documentation Conventions

sd_disconnect_pins

Tcl command; disconnects a list of SmartDesign top level ports and/or instance pins from the net they are connected to.

sd_disconnect_pins \
-sd_name smartdesign_component_name \
-pin_names port_or_pin_or_slice_names

Arguments

-sd_name smartdesign_component_name

Specifies the name of the SmartDesign component. It is mandatory.

-pin_names port_or_pin_or_slice_names

Specifies the port, pin and/or slice names to be disconnected. It is mandatory. This command will fail if the ports, pins and/or slices do not exist.

Examples

sd_disconnect_pins -sd_name {topp} -pin_names {B_ren RAM1K20_0:B_ADRR[12]}

sd_disconnect_pins -sd_name {SD1} -pin_names {AND2_0:B AND3_0:B AND3_0:A PF_XCVR_ERM_C0_0:LANE0_RX_READY}

Notes

This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.

See Also

Tcl Command Documentation Conventions

sd_duplicate_instance

Tcl command; creates a new instance in a SmartDesign with the same module/component as the original instance.

sd_duplicate_instance \
-sd_name smartdesign_component_name \
-instance_name instance_name \[-duplicate_instance_name duplicate_instance_name]
Libero SoC Tcl Commands Reference Guide

Arguments

- **sd_name**  `smartdesign_component_name`
  Specifies the name of the SmartDesign component. It is mandatory.
- **instance_name**  `instance_name`
  Specifies the name of the instance to be duplicated. It is mandatory.
- **duplicate_instance_name**  `duplicate_instance_name`
  Specifies the name of the duplicate instance. It is optional. If the `duplicate_instance_name` is not specified, it will be automatically generated as `<instance_name><index>` (index is an automatically generated integer starting at 0 such that the instance name is unique in the SmartDesign).

Examples

```tcl
sd_duplicate_instance -sd_name {top} -instance_name {PF_CCC_C0_0}
sd_duplicate_instance -sd_name {top} -instance_name {SUB_0} -
duplicate_instance_name {T1}
```

Notes

This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.

See Also

[Tcl Command Documentation Conventions](#)

---

**sd_hide_bif_pins**

Tcl command; hides one or more already exposed internal scalar or bus pins/ports of a Bus Interface pin/port.

```
sd_hide_bif_pins \
-sd_name  `smartdesign_component_name` \
-bif_pin_name  `name_of_the_bif_pin_or_port` \-pin_names  `pins_or_ports_to_be_exposed`
```

Arguments

- **sd_name**  `smartdesign_component_name`
  Specifies the name of the SmartDesign component. It is mandatory.
- **bif_pin_name**  `name_of_the_bif_pin_name`
  Specifies the name of the Bus Interface pin for which the internal pins must be hidden. It is mandatory.
- **pin_name**  `pins_to_be_hidden`
  Specifies the bus interface internal pin/port names to be hidden. It is mandatory.

Examples

```tcl
sd_hide_bif_pins -sd_name {sd1} -bif_pin_name {COREAXI4INTERCONNECT_C0_0:AXI4mmaster0} -
pin_names {COREAXI4INTERCONNECT_C0_0:MASTER0_AWADDR}
sd_hide_bif_pins -sd_name {SD1} -bif_pin_name {CLKS_FROM_TXPLL_0} -pin_names
{TX_PLL_LOCK_0}
```

Notes

This command will not hide multiple pins/ports in this release. Support to hide multiple pins/ports will be provided in the next Libero release. This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.
See Also
Tcl Command Documentation Conventions

sd_instantiate_component

Tcl command; instantiates a Libero SmartDesign component or a core component into another SmartDesign component.

```
sd_instantiate_component \n  -sd_name smartdesign_component_name \n  -component_name component_module_name \n  [-instance_name instance_name]
```

Arguments

- **-sd_name smartdesign_component_name**
  Specifies the name of the SmartDesign component in which other components will be instantiated. It is mandatory.

- **-component_name component_module_name**
  Specifies the name of the component being instantiated in the SmartDesign component. It is mandatory. The components include SmartDesign components, core components created for different types of cores from the catalog and blocks.

- **-instance_name instance_name**
  Specifies the instance name of the Libero component being instantiated in the SmartDesign component. It is optional. By default, the instance name is <component_module_name>_<index> (index is an automatically generated integer starting at 0 such that the instance name is unique in the SmartDesign).

Examples

```
sd_instantiate_component -sd_name {sub} -component_name {sd1} -instance_name {sd1_0}
sd_instantiate_component -sd_name {top} -component_name {PF_CCC_C0}
```

See Also
Tcl Command Documentation Conventions

sd_instantiate_core

Tcl command; instantiates a core from the catalog directly into a SmartDesign component (Direct Instantiation) without first having to create a component for the core. The file-set related to the core is generated only when the SmartDesign in which the core is instantiated is generated. The GUI equivalent of this command is not currently supported in Libero. To instantiate a core in a SmartDesign component in the GUI, you have to first create a component for the core.

```
sd_instantiate_core \n  -sd_name smartdesign_component_name \n  -core_vlnv vendor:library:name:version \n  [-instance_name instance_name]
```

Arguments

- **-sd_name smartdesign_component_name**
  Specifies the name of the SmartDesign component. It is mandatory.

- **-core_vlnv vendor:library:name:version**
  Specifies the version identifier of the core being instantiated in the SmartDesign component. It is mandatory.
Specifies the instance name of the core being instantiated in the SmartDesign. It is optional. By default, the instance name is \(<\text{core\_name}_i\_\text{index}>\) (index is an automatically generated integer starting at 0 such that the instance name is unique in the SmartDesign).

**Examples**

```tcl
sd_instantiate_core -sd_name {top} -core_vlnv {Actel:DirectCore:COREAXI4INTERCONNECT:2.5.100} -instance_name {COREAXI4INTERCONNECT_C0_0}
```

**See Also**

[Tcl Command Documentation Conventions](#)

---

### sd_instantiate_hdl_core

Tcl command; instantiates a HDL+ core in a SmartDesign component. HDL+ core definition must be created on a HDL module before using this command.

```tcl
sd_instantiate_hdl_core
-\-sd_name \smartdesign\_component\_name \-
-\-hdll\_core\_name \hdll\_core\_module\_name \-
-[-\-instance\_name \instance\_name]
```

**Arguments**

- `-sd_name smartdesign_component_name`
  Specifies the name of the SmartDesign component. It is mandatory.
- `-hdll\_core\_name hdll\_core\_module\_name`
  Specifies the name of the HDL+ core module being instantiated in the SmartDesign component. It is mandatory.
- `-instance\_name instance\_name`
  Specifies the instance name of the HDL+ core being instantiated in the SmartDesign. It is optional. By default, the instance name is \(<\text{hdll\_core\_module\_name}_i\_\text{index}>\) (index is an automatically generated integer starting at 0 such that the instance name is unique in the SmartDesign).

**Examples**

```tcl
sd_instantiate_hdl_core -sd_name {top} -hdll\_core\_name {temp} -instance\_name {temp3}
```

**See Also**

[Tcl Command Documentation Conventions](#)

---

### sd_instantiate_hdl_module

Tcl command; instantiates a HDL module in a SmartDesign component. The HDL file in which the HDL module is defined must be imported/linked before running this command.

```tcl
sd_instantiate_hdl_module
-\-sd_name \smartdesign\_component\_name \-
-\-hdll\_module\_name \hdll\_module\_name \-
-[-\-instance\_name \instance\_name]
```

**Arguments**

- `-sd_name smartdesign_component_name`
  Specifies the name of the SmartDesign component. It is mandatory.
- `-hdll\_module\_name hdll\_module\_name`

---
Specifies the name of the HDL module being instantiated in the SmartDesign component. It is mandatory.

- hdl_file hdl_file
  Specifies the path of the HDL file in which the HDL module is defined. The HDL file path can be relative to project folder for imported files but the path has to be complete for linked files. It is mandatory.

  - instance_name instance_name
    Specifies the instance name of the HDL module. It is optional. By default, the instance name is 
    <hdl_module_name>_<index> (index is an automatically generated integer starting at 0 such that the instance name is unique in the SmartDesign).

Examples

sd_instantiate_hdl_module -sd_name {top} -hdl_module_name {and1} -hdl_file {hdl\and1.v}
sd_instantiate_hdl_module -sd_name {top} -hdl_module_name {and_ex} -hdl_file {hdl\and_ex.v} -instance_name {test_hdl_hdl_module_name_plus1_1}

See Also

Tcl Command Documentation Conventions

sd_instantiate_macro
Tcl command; instantiates a Microsemi primitive macro in a SmartDesign component.

Arguments

- sd_name smartdesign_component_name
  Specifies the name of the SmartDesign component. It is mandatory.

- macro_name macro_module_name
  Specifies the name of the macro being instantiated in the SmartDesign component. It is mandatory.

- instance_name instance_name
  Specifies the instance name of the macro. It is optional. By default, the instance name is <macro name>_<index> (index is an automatically generated integer starting at 0 such that the instance name is unique in the SmartDesign).

Examples

sd_instantiate_macro -sd_name {TOP} -macro_name {MX2} -instance_name {MX2_0}
sd_instantiate_macro -sd_name {TOP} -macro_name {MACC_PA}

See Also

Tcl Command Documentation Conventions

sd_invert_pins
Tcl command; inverts one or more top level ports or instance level pins in a SmartDesign.

Arguments

- sd_name smartdesign_component_name
  Specifies the name of the SmartDesign component. It is mandatory.

- pin_names port_or_pin_names

Examples

sd_invert_pins -sd_name smartdesign_component_name -pin_names port_or_pin_names
Arguments
- `sd_name smartdesign_component_name`
  Specifies the name of the SmartDesign component. It is mandatory.
- `pin_names port_or_pin_names`
  Specifies the port or pin names to be inverted. It is mandatory. This parameter can take multiple values. This command will fail if the port/pin does not exist.

Examples
```
sd_invert_pins -sd_name {main} -pin_names {A}
sd_invert_pins -sd_name {main} -pin_names {MX2_1:S MX2_1:Y A B}
```

See Also
Tcl Command Documentation Conventions

sd_mark_pins_unused
Tcl command; marks one or more SmartDesign instance level output pins as unused. When an output pin is marked as unused, no Design Rule Check (DRC) warning will be printed for floating output pins while generating the SmartDesign.
```
sd_mark_pins_unused \
  -sd_name smartdesign_component_name \
  -pin_names port_or_pin_names
```

Arguments
- `sd_name smartdesign_component_name`
  Specifies the name of the SmartDesign component. It is mandatory.
- `pin_names port_or_pin_names`
  Specifies the names of the instance pins to be marked as unused. It is mandatory.

Examples
```
sd_mark_pins_unused -sd_name {top} -pin_names {PF_CCC_C0_0:PLL_LOCK_0}
```

Notes
This command will not work on multiple pins in this release. Support for multiple pins will be provided in the next Libero release.

See Also
Tcl Command Documentation Conventions

sd_remove_pins_from_group
Tcl command; removes one or more pins from a pin group on an instance in a SmartDesign.
```
sd_remove_pins_from_group \
  -sd_name smartdesign_component_name \
  -instance_name instance_name \
  -group_name group_name \
  -pin_names pin_names
```

Arguments
- `sd_name smartdesign_component_name`
Specifies the name of the SmartDesign component. It is mandatory.
-\texttt{instance\_name} \texttt{instance\_name}

Specifies the name of the instance on which the pin group is present. It is mandatory.
-\texttt{group\_name} \texttt{group\_name}

Specifies the name of the pin group from which pins need to be removed. It is mandatory.
-\texttt{pin\_names} \texttt{pin\_names}

Specifies the list of pin names to be removed from the pin group. It is mandatory.

\textbf{Examples}

\begin{verbatim}
 sd_remove_pins_from_group -sd\_name \{TOP\} -instance\_name \\
 \{COREAXI4INTERCONNECT\_C0\_0\} -group\_name \{Group\} -pin\_names \{ARESETN ACLK\}
\end{verbatim}

\textbf{See Also}
Tcl Command Documentation Conventions

\textbf{sd\_rename\_instance}
Tcl command; renames an instance in a SmartDesign component. This command can be used to rename any type of instances (instances of other SmartDesigns components, core components, HDL modules, HDL+ cores and Microsemi macros) in a SmartDesign.

\begin{verbatim}
 sd\_rename\_instance
 -sd\_name component\_name
 -current\_instance\_name instance\_name
 -new\_instance\_name new\_instance\_name
\end{verbatim}

\textbf{Arguments}
-\texttt{sd\_name} \texttt{component\_name}

Specifies the name of the SmartDesign component in which the instance name has to be renamed. It is mandatory.
-\texttt{current\_instance\_name} \texttt{instance\_name}

Specifies the name of the instance to be renamed. It is mandatory.
-\texttt{new\_instance\_name} \texttt{new\_instance\_name}

Specifies the new instance name. It is mandatory.

\textbf{Examples}

\begin{verbatim}
 sd\_rename\_instance -sd\_name \{top\} -current\_instance\_name \{DFN1\_0\} -new\_instance\_name \{DFN1\_new\}
\end{verbatim}

\textbf{Notes}
This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.

\textbf{See Also}
Tcl Command Documentation Conventions

\textbf{sd\_rename\_pin\_group}
Tcl command; renames a pin group on an instance in a SmartDesign component.
sd_rename_pin_group
- sd_name smartdesign_component_name
- instance_name instance_name
- current_group_name current_pin_group_name
- new_pin_group_name new_pin_group_name

Arguments
- sd_name smartdesign_component_name
  Specifies the name of the SmartDesign component. It is mandatory.
- instance_name instance_name
  Specifies the name of the instance on which the pin group is present. It is mandatory.
- current_group_name current_pin_group_name
  Specifies the name of the pin group to be renamed. It is mandatory.
- new_group_name new_port_name
  Specifies the new name of the pin group. It is mandatory.

Examples
sd_rename_pin_group -sd_name {TOP} -instance_name {COREAXI4INTERCONNECT_C0_0} -current_group_name {Group} -new_group_name {MyNewGroup}

See Also
Tcl Command Documentation Conventions

sd_rename_port
Tcl command; renames a SmartDesign port.

sd_rename_port
- sd_name smartdesign_component_name
- current_port_name port_name
- new_port_name new_port_name

Arguments
- sd_name smartdesign_component_name
  Specifies the name of the SmartDesign component. It is mandatory.
- current_port_name port_name
  Specifies the name of the port to be renamed in the SmartDesign component. It is mandatory. Note that only port names can be renamed, and not port types (scalar ports cannot be renamed as bus ports and vice versa).
- new_port_name new_port_name
  Specifies the new name of the specified port. It is mandatory.

Examples
sd_rename_port -sd_name {top} -library {work} -current_port_name {c1} -new_port_name {c2}

Notes
This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.
### sd_save_core_instance_config

Tcl command; this command is used to save the core instance configuration specified using one or more `sd_configure_core_instance` commands. This command is typically used after configuring a core instance in a SmartDesign, to save that core instance's configuration.

```
sd_save_core_instance_config \
    -sd_name smartdesign_component_name \
    -instance_name core_instance_name
```

**Arguments**

- **-sd_name smartdesign_component_name**
  Specifies the name of the SmartDesign component. It is mandatory.

- **-instance_name instance_name**
  Specifies the name of the core instance in the SmartDesign for which the configuration must be saved. It is mandatory.

**Examples**

```
  sd_save_core_instance_config -sd_name {SD1} -instance_name {COREFIFO_0}
```

### See Also

[Tcl Command Documentation Conventions](#)

### sd_show_bif_pins

Tcl command; exposes one or more internal scalar or bus pins/ports of a Bus Interface pin/port. A Bus Interface pin/port is usually a group of normal scalar or bus pins/ports grouped together and used to connect instances that have similar interfaces. The internal pins/ports underneath the Bus Interface pin/port may have to be exposed in some cases to connect to some logic in the design.

```
sd_show_bif_pins \
    -sd_name smartdesign_component_name \
    -bif_pin_name name_of_the_bif_pin_or_port \
    -pin_names pins_or_ports_to_be_exposed
```

**Arguments**

- **-sd_name smartdesign_component_name**
  Specifies the name of the SmartDesign component. It is mandatory.

- **-bif_pin_name name_of_the_bif_pin_or_port**
  Specifies the name of the Bus Interface pin/port for which the internal pins/ports need to be exposed. It is mandatory.

- **-pin_names pins_or_ports_to_be_exposed**
  Specifies the names of the Bus Interface internal pins/ports to be exposed. It is mandatory.

**Examples**

```
  sd_show_bif_pins -sd_name {TOP} -bif_pin_name {COREAXI4INTERCONNECT_C0_0:AXI4mmaster0} -pin_names {COREAXI4INTERCONNECT_C0_0:MASTER0_AWADDR}
```

### See Also

[Tcl Command Documentation Conventions](#)
sd_show_bif_pins -sd_name {SD1} -bif_pin_name {CLKS_FROM_TXPLL_0} -pin_names [TX_PLL_LOCK_0]

Notes
This command will not expose multiple pins/ports in this release. Support to expose multiple scalar or bus pins/ports will be provided in the next Libero release.

See Also
Tcl Command Documentation Conventions

sd_update_instance
Tcl command; updates an instance in a SmartDesign with its latest definition. This command is useful when the interface (port-list) of the component/module instantiated in a SmartDesign has changed. This command can be used to update any type of instance such as instances of other SmartDesign components, core components, HDL modules and HDL+ cores in a SmartDesign.

sd_update_instance \
-sd_name smartdesign_component_name \
-instance_name instance_name

Arguments

- sd_name smartdesign_component_name
  Specifies the name of the SmartDesign component. It is mandatory.
- instance_name instance_name
  Specifies the name of the instance to be updated. It is mandatory.

Examples

sd_update_instance -sd_name {top} -instance_name {CORESMIP_C0_0}

Notes
This command is not required to build a SmartDesign component. This command maps to an interactive user action in the SmartDesign Canvas and will not be present in the exported SmartDesign component Tcl description.

HDL Tcl Commands

create_hdl_core

This Tcl command is used to create a core component from an HDL core.

```
create_hdl_core \
-module {module_name} \
-file {file_path} \
-library {library_name} \
-package {package_name}
```

Arguments

- **module** `{module_name}`
  Specify the module name for which you want to create a core component. This is a mandatory argument.
- **file** `{file_path}`
  Specify the file path of the module from which you create a core component. This is a mandatory argument.
- **library** `{library_name}`
  Specify the library name from which you want to create a HDL core. This is an optional argument.
- **package** `{package_name}`
  Specify the package name from which you want to create a core component. This is an optional argument.

Example

```
create_hdl_core -file {./HDL_CORE_TEST/hdl/hdl_core.v} -module {test_hdl_core}
```

Tcl Command Documentation Conventions

hdle_core_add_bif

This Tcl command adds a bus interface to an HDL core.

```
hdle_core_add_bif \
-hdle_core_name {hdle_core_name} \
-bif_definition {Name:Vendor:Library:Role} \
-bif_name {bus_interface_name} \
[-signal_map {signal_map}]
```

Arguments

- **module** `{module_name}`
  Specify the HDL core name to which the bus interface needs to be added. This is a mandatory argument.
- **bif_definition** `{Name:Vendor:Library:Role}`
  Specify the Bus Interface Definition Name, Vendor, Library and Bus Role of the core in the format `{N:V:L:R}`. This is a mandatory argument.
- **bif_name** `{bus_interface_name}`
  Specify the bus interface port name being added to the HDL core. This is a mandatory argument.
Libero SoC Tcl Commands Reference Guide

-signal_map {signal_map}
This argument is used to specify the signal map of the bus interface. This is an optional argument.

Example
hdl_core_add_bif -hdl_core_name {test_hdl_core} -bif_definition {AHB:AMBA:AMBA2:master} -bif_name {BIF_1}

See Also
Tcl Command Documentation Conventions

hdl_core_assign_bif_signal
Maps a bus interface signal definition name to an HDL core module port name.

<table>
<thead>
<tr>

Tcl Command Documentation Conventions

hdl_core_delete_parameters
This Tcl command deletes parameters from a HDL core definition.

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-hdl_core_name</td>
<td>Specify the HDL core name from which you want to delete parameters. This is a mandatory argument.</td>
</tr>
<tr>
<td>-parameters</td>
<td></td>
</tr>
</tbody>
</table>

Arguments
-hdl_core_name {hdl_core_name}
Specify the HDL core name from which you want to delete parameters. This is a mandatory argument.
-parameters {parameter_list}
Specify the list of parameters from a HDL core. This is typically done to remove parameters from the list of parameters that was automatically extracted using the `hdl_core_extract_ports_and_params` command. This is a mandatory argument.

**Example**

```tcl
hdl_core_delete_parameters -hdl_core_name {test_hdl_core} -parameters {WIDTH}
```

**See Also**

[Tcl Command Documentation Conventions](#)

### hdl_core_extract_ports_and_parameters

This Tcl command automatically extracts ports and generic parameters from an HDL core module description.

#### Arguments

- `-hdl_core_name hdl_core_name`
  
  Specifies the HDL core name from which you want to extract signal names and generic parameters. This is a mandatory argument.

**Example**

```tcl
hdl_core_extract_ports_and_params -hdl_core_name {test_hdl_core}
```

**See Also**

[Tcl Command Documentation Conventions](#)

### hdl_core_remove_bif

Remove an existing bus interface from an HDL core.

#### Arguments

- `-module module_name`
  
  Specify the HDL core name from which the bus interface needs to be removed. This is a mandatory argument.

- `-bif_name bus_interface_name`
  
  Specify the bus interface name that needs to be removed from the HDL core. This is a mandatory argument.

**Example**

```tcl
hdl_core_remove_bif -hdl_core_name {mod1} -bif_name {BIF_1}
```

**See Also**

[Tcl Command Documentation Conventions](#)
**hdl_core_rename_bif**

Rename an existing bus interface port of a HDL core.

```tcl
hdl_core_rename_bif
-hdl_core_name {hdl_core_name} \
-current_bif_name {current_bus_interface_name} \
-new_bif_name {new_bus_interface_name}
```

**Arguments**

- `-hdl_core_name {hdl_core_name}`
  Specify the HDL core name for which the bus interface needs to be renamed. This is a mandatory argument.

- `-current_bif_name {current_bus_interface_name}`
  Specify the old bus interface name that needs to be renamed for the HDL core. This is a mandatory argument.

- `-new_bif_name {new_bus_interface_name}`
  Specify the new bus interface name that needs to be updated for the HDL core. This is a mandatory argument.

**Example**

```
hd़l_core_rename_bif -hdl_core_name {test_hdl_plus} -current_bif_name {BIF_2} -new_bif_name {BIF_3}
```

**See Also**

[Tcl Command Documentation Conventions](#)

---

**hdl_core_unassign_bif_signal**

Unmap an existing bus interface signal from a bus interface.

```tcl
hdl_core_unassign_bif_signal
-hdl_core_name {hdl_core_name} \
-bif_name {bus_interface_name} \
-bif_signal_name {bif_signal_name}
```

**Arguments**

- `-hdl_core_name {hdl_core_name}`
  Specify the HDL core name from which the bus interface signal needs to be deleted. This is a mandatory argument.

- `-bif_name {bus_interface_name}`
  Specify the bus interface name for which you want to unassign a core signal. This is a mandatory argument.

- `-bif_signal_name {bif_interface_signal_name}`
  Specify the bus interface signal name for which you want to unassign a core signal. This argument is mandatory.

**Example**

```
hd़l_core_unassign_bif_signal -hdl_core_name {test_hdl_plus} -bif_name {BIF_2} -bif_signal_name {PENABLE}
```

**See Also**

[Tcl Command Documentation Conventions](#)
remove_hdl_core

This Tcl command removes an HDL core component from the current project.

```
remove_hdl_core \
-hdl_core_name {hdl_core_name}
```

Arguments

-hdl_core_name `{hdl_core_name}`

Specify the module name from which you want to delete a core component. This is a mandatory argument.

Example

```
remove_hdl_core -hdl_core_name {test_hdl_core}
```

Tcl Command Documentation Conventions
Command Tools

CONFIGURE_CHAIN

CONFIGURE_CHAIN is a command tool used in run_tool. The command run_tool -name (CONFIGURE_CHAIN) takes a script file that contains specific Tcl commands and passes them to FlashPro Express for execution.

```
run_tool -name {CONFIGURE_CHAIN} -script {fpro_cmds.tcl}
```

*fpro_cmds.tcl* is a Tcl script that contains specific Tcl commands to configure JTAG chain. For details on JTAG chain programming Tcl commands, refer to the Tcl commands section in the Libero SoC Online Help.

Do not include any project-management commands such as open_project, save_project, or close_project in this *fpro_cmds.tcl* script file. The run_tool -name {CONFIGURE_CHAIN} command generates these project-management commands for you.

**Note:** For a new Libero project without a JTAG chain, executing this command causes Libero to first add the existing design device to the JTAG chain and then execute the commands from the script. If, for example, the script *fpro_cmds.tcl* contains commands to add four devices, executing the command run_tool -name {CONFIGURE_CHAIN} -script {fpro_cmds.tcl} will create a JTAG chain of the Libero design device and the four devices. For existing Libero projects that already have a JTAG chain, the command is executed on the existing JTAG chain.

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4

**Example**

```
run_tool -name {CONFIGURE_CHAIN} -script {d:/fpro_cmds.tcl}
```

#Example fpro_cmds.tcl command file for the -script parameter

```
add_actel_device
- file {./sd_prj/sp_g3/designer/impl1/sd1.stp} 
- name {dev1}
enable_device -name {M2S050TS_5} -enable 0
add_non_actel_device
- ir 2 
- tck 1.00 
- name {Non-Microsemi Device}
add_non_actel_device
- ir 2 
- tck 1.00 
- name {Non-Microsemi Device (2)}
remove_device -name {Non-Microsemi Device}
set_device_to_highz -name {M2S050TS_5} -highz 1
add_actel_device
- device {M2S050TS} 
- name {M2S050TS (3)}
select_libero_design_device -name {M2S050TS (3)}
```
Return

Returns 0 on success and 1 on failure.

**CONFIGURE_PROG_OPTIONS**

CONFIGURE_PROG_OPTIONS is a command tool used in configure_tool. Configure_tool -name {CONFIGURE_PROG_OPTIONS} sets the programming options.

```
class configure_tool:
    name = CONFIGURE_PROG_OPTIONS
    
    def set(self, **params):
        self.attrs = {**self.attrs, **params}

    def get(self):
        return self.attrs
```

The following table lists the parameter names and values.

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>design_version</td>
<td>Integer (0 through 65535)</td>
<td>Sets the design version. It must be greater than the Back level version in SPM Update Policy.</td>
</tr>
<tr>
<td>enable_auto_update</td>
<td>boolean {true</td>
<td>false}</td>
</tr>
<tr>
<td>enable_prog_recovery</td>
<td>boolean {true</td>
<td>false}</td>
</tr>
<tr>
<td>silicon_signature</td>
<td>Hex {&lt;max length 8 Hex characters&gt;}</td>
<td>32-bit (8 hex characters) silicon signature to be programmed into the device. This field can be read from the device using the JTAG USERCODE instruction.</td>
</tr>
<tr>
<td>spi_clock_freq</td>
<td></td>
<td>Sets SPI clock frequency from a list of possible values {1.00</td>
</tr>
<tr>
<td>spi_data_transfer_mode</td>
<td>{100</td>
<td>101</td>
</tr>
</tbody>
</table>

**Supported Families**

SmartFusion2
IGLOO2

**Example**

```
configure_tool -name {CONFIGURE_PROG_OPTIONS}\
    -params {design_version:255}\
    -params {enable_auto_update: true}\
    -params {enable_prog_recovery: true}
```
-params {silicon_signature:abcdef}
-params {spi_clk_freq:25.00}
-params {spi_data_transfer_mode:100}

Return

Returns 0 on success and 1 on failure.

**CONFIGURE_PROG_OPTIONS_RTG4 (RTG4 only)**

**configure_tool** -name {CONFIGURE_PROG_OPTIONS_RTG4} is a command tool used in configure_tool. Configure_tool -name {CONFIGURE_PROG_OPTIONS_RTG4} sets the programming options for RTG4 devices.

The following table lists the parameter names and values.

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>design_version</td>
<td>Integer (0 through 65535)</td>
<td>Sets the design version. It must be greater than the Back level version in SPM Update Policy.</td>
</tr>
<tr>
<td>silicon_signature</td>
<td>Hex (&lt;max length 8 Hex characters&gt;)</td>
<td>32-bit (8 hex characters) silicon signature to be programmed into the device. This field can be read from the device using the JTAG USERCODE instruction.</td>
</tr>
<tr>
<td>disable_digest_check</td>
<td>boolean {true</td>
<td>false}</td>
</tr>
<tr>
<td>disable_fabric_erase_write_verify</td>
<td>boolean {true</td>
<td>false}</td>
</tr>
<tr>
<td>disable_jtag</td>
<td>boolean {true</td>
<td>false}</td>
</tr>
<tr>
<td>disable_probe_read_write</td>
<td>boolean {true</td>
<td>false}</td>
</tr>
<tr>
<td>disable_spi</td>
<td>boolean {true</td>
<td>false}</td>
</tr>
<tr>
<td>one_time_programmable</td>
<td>boolean {true</td>
<td>false}</td>
</tr>
<tr>
<td>system_controller_suspend_mode</td>
<td>boolean {true</td>
<td>false}</td>
</tr>
</tbody>
</table>
Supported Families
RTG4

Example

```tcl
configure_tool -name {CONFIGURE_PROG_OPTIONS_RTG4}\
   -params {design_version:255}\
   -params {silicon_signature: abcd}\
   -params {disable_digest_check:true}\
   -params {disable_fabric_erase_write_verify:true}\
   -params {disable_jtag:true}\
   -params {disable_probe_read_write:false}\
   -params {disable_spi:false}\
   -params {one_time_programmable:false}\
   -params {system_controller_supsend_mode:false}
```

Return

Returns 0 on success and 1 on failure.

FLASH_FREEZE

FLASH_FREEZE is a command tool used in configure_tool. You use the `configure_tool -name {FLASH_FREEZE}` command to specify:

- The state of the uRAM and LSRAM when the FPGA fabric is in the Flash Freeze state.
- The MSS clock source when the FPGA fabric is in the Flash Freeze state.

```tcl
configure_tool -name {FLASH_FREEZE}\
   -params {name:value}\
   -params {name:value}
```

<table>
<thead>
<tr>
<th>Params_name</th>
<th>&lt;Params_value&gt;</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>FF_RAM_STATE</td>
<td>Enum {SUSPEND</td>
<td>SLEEP }</td>
</tr>
<tr>
<td>FF_MSS_CLOCK</td>
<td>Enum {RCOSC_1MHZ</td>
<td>RCOSC_50MHZ}</td>
</tr>
</tbody>
</table>

Supported Families
SmartFusion2, IGLOO2, RTG4

Example

```tcl
configure_tool -name {FLASH_FREEZE}\
   -params {FF_RAM_STATE:SUSPEND}\
   -params {FF_MSS_CLOCK:RCOSC_1MHZ}
```

Return

Returns 0 on success and 1 on failure.
GENERATEPROGRAMMINGFILE

GENERATEPROGRAMMINGFILE is a command tool used in the configure_tool command and the run_tool command. The configure_tool -name (GENERATEPROGRAMMINGFILE) Tcl command configures tool options. The run_tool -name (GENERATEPROGRAMMINGFILE) Tcl command generates the Bitstream used for programming.

```
run_tool -name {GENERATEPROGRAMMINGFILE}
```

This command takes no parameters.

**Supported Families**

SmartFusion2, IGLOO2, RTG4

**Return**

Returns 0 on success and 1 on failure.

INIT_LOCK

INIT_LOCK is a TCL equivalent command name for the Configure Register Lock Bits tool. It is passed as a parameter to the configure_tool command.

The INIT_LOCK command imports a Lock Bit Configuration File (*.txt) and configures the Register Lock Bits of FDDR, MSS, and SERDES blocks for SmartFusion2 and IGLOO2 devices so that they cannot be overwritten by Fabric or MSS Masters that have write access to these registers. This command takes only one parameter, INIT_LOCK_FILE, which has the configuration file’s full path or relative path as its value.

```
configure_tool -name {INIT_LOCK} -params {INIT_LOCK_FILE: \<full_or_relative_path_to_config_lock_bit_file>}
```

**Supported Families**

SmartFusion2 and IGLOO2

**Example**

```
configure_tool -name {INIT_LOCK}\n  -params {INIT_LOCK_FILE:D:/designs/g4_fclk_mdrr_clk/sb_init_config_lock_bits_src.txt} # full path
configure_tool -name {INIT_LOCK}\n  -params {INIT_LOCK_FILE: ..:/sb_init_config_lock_bits_src.txt} # relative path from project folder
```

**Return**

```
configure_tool -name { INIT_LOCK } -params {INIT_LOCK_FILE: \<full_or_relative_path_to_config_lock_bit_file>}
```

Returns 0 on success and 1 on failure.

PROGRAMDEVICE

PROGRAMDEVICE is a command tool used in configure_tool and run_tool. Configure_tool allows you to configure the tool’s parameters and values prior to executing the tool. Run_tool executes the tool with the configured parameters.

To program the design in Libero SoC, you must first configure the PROGRAMDEVICE tool with configure_tool command and then execute the PROGRAMDEVICE command with the run_tool command.
Use the commands to configure your programming action and the programming procedures associated with the program action.

```tcl
configure_tool -name {PROGRAMDEVICE} 
-params {prog_action:params_value} 
-params {prog_optional_procedures:params_value}
```

```tcl
run_tool -name {PROGRAMDEVICE}
```

### configure_tool –name {PROGRAMDEVICE} parameter:value pair

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>prog_action</td>
<td>String [ PROGRAM</td>
<td>VERIFY</td>
</tr>
<tr>
<td>prog_optional_procedures</td>
<td>Depends on the action from the prog_action parameter.</td>
<td>This parameter is optional. It is only required when the user wants to enable optional procedure.</td>
</tr>
</tbody>
</table>

### run_tool –name {PROGRAMDEVICE} Parameter:value pair

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Supported Families

- SmartFusion2
- IGLOO2

### Example

```tcl
configure_tool \ 
-params {prog_action:PROGRAM} \ 
run_tool -name {PROGRAMDEVICE} \ 
```
configure_tool -name {PROGRAMDEVICE} -params {prog_action:DEVICE_INFO}
run_tool -name {PROGRAMDEVICE} #Takes no parameters

Return
configure_tool -name {PROGRAMDEVICE} returns 0 on success and 1 on failure.
run_tool -name {PROGRAMDEVICE} returns 0 on success and 1 on failure.

PROGRAMMING_BITSTREAM_SETTINGS (RTG4 Only)

PROGRAMMING_BITSTREAM_SETTINGS is a command tool used in configure_tool. Configure_tool -name {PROGRAMMING_BITSTREAM_SETTINGS} sets the bitstream settings for your RTG4 devices.

configure_tool -name {PROGRAMMING_BITSTREAM_SETTINGS}
-params {name:value}
-params {name:value}
-params {name:value}

The following table lists the parameter names and values.

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>system_controller_suspend_mode</td>
<td>true</td>
<td>false</td>
</tr>
<tr>
<td>disable_digest_check</td>
<td>true</td>
<td>false</td>
</tr>
<tr>
<td>disable_jtag</td>
<td>true</td>
<td>false</td>
</tr>
<tr>
<td>disable_fabric_erase_write_verify</td>
<td>true</td>
<td>false</td>
</tr>
<tr>
<td>disable_probe_read_write</td>
<td>true</td>
<td>false</td>
</tr>
<tr>
<td>disable_spi</td>
<td>true</td>
<td>false</td>
</tr>
</tbody>
</table>
Supported Families
RTG4

Example

```tcl
configure_tool \
  -name {PROGRAMMING_BITSTREAM_SETTINGS} \
  -params {disable_digest_check:false} \
  -params {disable_fabric_erase_write_verify:false} \
  -params {disable_jtag:true} \
  -params {disable_probe_read_write:false} \
  -params {disable_spi:false} \
  -params {one_time_programmable:false} \
  -params {system_controller_suspend_mode:true}
```

Return

Returns 0 on success and 1 on failure.

PLACEROUTE

To place and route a design in Libero SoC, you must first configure the PLACEROUTE tool with the `configure_tool` command and then execute the PLACEROUTE tool with the `run_tool` command.

```tcl
configure_tool -name {PLACEROUTE} [-params {[name: value ]}]+
```

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TDPR</td>
<td>true</td>
<td>false</td>
</tr>
<tr>
<td>PDPR</td>

<tr>
<td>EFFORT_LEVEL</td>
<td>true</td>
<td>false</td>
</tr>
<tr>
<td>INCRPLACEANDROUTE</td>
<td>true</td>
<td>false</td>
</tr>
<tr>
<td>REPAIR_MIN_DELAY</td>
<td>true</td>
<td>false</td>
</tr>
<tr>
<td>NUM_MULTI_PASSES</td>
<td>1-25</td>
<td>Specifies the number of passes to run. The default is 5. Maximum is 25.</td>
</tr>
<tr>
<td>Name</td>
<td>Value</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------</td>
<td>------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>START_SEED_INDEX</td>
<td>1-100</td>
<td>Indicates the random seed index which is the starting point for the passes. Its value should range from 1 to 100. If not specified, the default behavior is to continue from the last seed index which was used.</td>
</tr>
<tr>
<td>MULTI_PASS_LAYOUT</td>
<td>true</td>
<td>false</td>
</tr>
<tr>
<td>MULTI_PASS_CRITERIA</td>
<td>SLOWEST_CLOCK</td>
<td>Specifies the criteria used to run multi-pass layout:</td>
</tr>
<tr>
<td></td>
<td>SPECIFIC_CLOCK</td>
<td>• SLOWEST_CLOCK: Use the slowest clock frequency in the design in a given pass as the performance reference for the layout pass.</td>
</tr>
<tr>
<td></td>
<td>VIOLATIONS</td>
<td>• SPECIFIC_CLOCK: Use a specific clock frequency as the performance reference for all layout passes.</td>
</tr>
<tr>
<td></td>
<td>TOTAL_POWER</td>
<td>• VIOLATIONS: Use the pass that best meets the slack or timing-violations constraints. This is the default.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• TOTAL POWER: Specifies the best pass to be the one that has the lowest total power (static + dynamic) out of all layout passes.</td>
</tr>
<tr>
<td>SPECIFIC_CLOCK</td>
<td>Clock_Name</td>
<td>Applies only when MULTI_PASS_CRITERIA is set to SPECIFIC_CLOCK. It specifies the name of the clock in the design used for Timing Violation Measurement.</td>
</tr>
<tr>
<td>DELAY_ANALYSIS</td>
<td>max</td>
<td>min</td>
</tr>
<tr>
<td></td>
<td>max: Use timing violations (slacks) obtained from maximum delay analysis</td>
<td></td>
</tr>
<tr>
<td></td>
<td>min: Use timing violations (slacks) obtained from minimum delay analysis</td>
<td></td>
</tr>
<tr>
<td>STOP_ON_FIRST_PASS</td>
<td>true</td>
<td>false</td>
</tr>
<tr>
<td>SLACK_CRITERIA</td>
<td>WORST_SLACK</td>
<td>Applies only when MULTI_PASS_CRITERIA is set to VIOLATIONS. Specifies how to evaluate the timing violations (slacks). The default is WORST_SLACK.</td>
</tr>
<tr>
<td>Name</td>
<td>Value</td>
<td>Description</td>
</tr>
<tr>
<td>---------------</td>
<td>-------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>WORST_SLACK</td>
<td></td>
<td>The largest amount of negative slack (or least amount of positive slack if all constraints are met) for each pass is identified and then the largest value out of all passes will determine the best pass. This is the default.</td>
</tr>
<tr>
<td>TOTAL_NEGATIVE_SLACK</td>
<td></td>
<td>The sum of negative slacks from the first 100 paths for each pass in the Timing Violation report is identified. The largest value out of all passes will determine the best pass. If no negative slacks exist for a pass, then use the worst slack to evaluate that pass. Note: The type of timing violations (slacks) used is determined by the ‘DELAY_ANALYSIS’ parameter.</td>
</tr>
</tbody>
</table>

| RGB_COUNT    | 1-18  | Allows an entity to override the placer’s RGB/RCLK bandwidth constraint. This option is useful for Block Creation. |

**Return Value**

Returns 0 on success and 1 on failure.

**run_tool**

```
run_tool -name {PLACEROUTE}
```

**Parameters**

None

**Return Value**

Returns 0 on success and 1 on failure.

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Example**

```
configure_tool -name {PLACEROUTE}\n  -params \{EFFORT_LEVEL:true\}\n  -params \{GB_DEMOTION:true\}\n  -params \{MULTI_PASS_CRITERIA:VIOLATIONS\}\n  -params \{MULTI_PASS_LAYOUT: false\}\n  -params \{NUM_MULTI_PASSES:5\}\n  -params \{PDPR: false\}\n  -params \{REPAIR_MIN_DELAY: true\}\n```
-params {REPLICATION:false}
-params {RGB_COUNT:18}
-params {SLACK_CRITERIA:WORST_SLACK}
-params {SPECIFIC_CLOCK:}
-params {START_SEED_INDEX:1}
-params {STOP_ON_FIRST_PASS:false}
-params {TDPR:true}
-params {USE_RAM_MATH_INTERFACE_LOGIC:false}
run_tool -name{PLACEROUTE}

PROGRAM_OPTIONS (SmartFusion2 and IGLOO2)
PROGRAM_OPTIONS is a command tool used in configure_tool. Configure_tool allows you to configure
the tool's parameters and values. This Tcl command is the Tcl equivalent of the Configure Bitstream
options in the Design Flow window.

configure_tool -name {PROGRAM_OPTIONS}
-params {name:value}
[-params {name:value}]

The following table lists the parameter names and values.

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>program_envm</td>
<td>Boolean {true</td>
<td>false</td>
</tr>
<tr>
<td>program_fabric</td>
<td>Boolean {true</td>
<td>false</td>
</tr>
<tr>
<td>program_mode</td>
<td>String {selected feature}</td>
<td>Only &quot;selected_features&quot; is supported.</td>
</tr>
<tr>
<td>program_security</td>
<td>Boolean {true</td>
<td>false</td>
</tr>
</tbody>
</table>

Supported Families
SmartFusion2, IGLOO2

Example
configure_tool -name {PROGRAM_OPTIONS}\
-params {program_envm:false}\
-params {program_fabric:true}\
-params {program_mode:selected_features}\
-params {program_security:true}

Return
Returns 0 on success and 1 on failure.
PROGRAM_RECOVERY

Configures the parameters in the Configure User Programming Data dialog box within Libero.

```tcl
configure_tool -name {PROGRAM_RECOVERY}
-params {enable_auto_update:value}
-params {enable_prog_recovery:value}
-params {spi_clk_freq:value}
-params {spi_data_transfer_mode:value}
```

**Arguments**

Enable_auto_update {true|false}

Enables auto update when set to true and disables it when set to false.

Enable_prog_recovery {true|false}

Enables programming recovery when set to true and disables when set to false.

Spi_clk_freq {1.00|2.08|3.13|4.16|5.00|6.25|8.30|12.50|25.00}

SPI clock frequency can be set to one of the values specified above.

Spi_data_transfer_mode {100}

SPI data transfer mode will set the values for SPS, SPO and SPH in the UI. SPS has a fixed value of 1. The user can change the values of only SPO and SPH to 0 or 1.

**Supported Families**

SmartFusion2, IGLOO2

**Exceptions**

None

**Example**

The following example sets the auto update and programming recovery to be ON. SPI clock frequency is set to 25MHz. SPO and SPH are set to 0.

```tcl
configure_tool -name {PROGRAM_RECOVERY}
-params {enable_auto_update:true}
-params {enable_prog_recovery:true}
-params {spi_clk_freq:25.00}
-params {spi_data_transfer_mode:100}
```

PROGRAMMER_INFO

PROGRAMMER_INFO is a command tool used in configure_tool. Configure_tool -name {PROGRAMMER_INFO} sets the programmer settings, similar to the way FlashPro commands set the programmer settings. This command supports these programmers: FlashPro3, FlashPro4, FlashPro5, FlashPro.

```tcl
configure_tool -name {PROGRAMMER_INFO}
-params [{name:value}]
```

The following tables list the parameter names and values.
**configure_tool –name {PROGRAMMER_INFO} Parameter:value (FlashPro5)**

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>flashpro5_clk_mode</td>
<td>String {free_running_clk</td>

</tbody>
</table>

For a detailed description of the parameters and values, refer to [Programmer Settings](#) in the Libero Online Help.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Examples**

For FlashPro3 programmer
```
configure_tool -name {PROGRAMMER_INFO}\n  -params {flashpro3_clk_mode:free_running_clk}\n  -params {flashpro3_force_freq:OFF}\n  -params {flashpro3_freq:400000}\n  -params {flashpro3_vpump:ON}
```

For FlashPro4 programmer
```
configure_tool -name {PROGRAMMER_INFO}\n  -params {flashpro4_clk_mode:free_running_clk}\n  -params {flashpro4_force_freq:OFF}\n  -params {flashpro4_freq:400000}\n  -params {flashpro4_vpump:ON}
```

For FlashPro5 programmer
```
configure_tool -name {PROGRAMMER_INFO}\n  -params {flashpro5_clk_mode:free_running_clk}\n  -params {flashpro5_force_freq:OFF}\n  -params {flashpro5_freq:400000}\n  -params {flashpro5_vpump:ON}
```

For FlashPro programmer
```
configure_tool -name {PROGRAMMER_INFO}\n  -params {flashpro_drive_trst:OFF}\n  -params {flashpro_force_freq:ON}\n  -params {flashpro_force_vddp:ON}\n  -params {flashpro_freq:400000}\n  -params {flashpro_vddl:ON}\n  -params {flashpro_vddp:2.5}\n  -params {flashpro_vpn:ON}\n  -params {flashpro_vpp:ON}
```
Return

Returns 0 on success and 1 on failure.

SPM

To configure security using Tcl, you must use the configure_tool Tcl command to pass the SPM configuration parameters.

```
configure_tool -name {SPM}
-params {name:value}
[-params {name:value}]+  
```

**configure_tool –name {SPM} parameter:value pair**

*Note: true | 1 will select the checkbox in the SPM UI*

-params {user_passkey_2:} \ 
-params {user_security_policy_protection:flashlock}

Return

Returns 0 on success and 1 on failure.

SYNTHESIZE

SYNTHESIZE is a command tool used in configure_tool and run_tool. Configure_tool is a general-purpose Tcl command that allows you to configure a tool's parameters and values prior to executing the tool. The run_tool Tcl command then executes the specified tool with the configured parameters.

To synthesize your design in Libero SoC, you first configure the synthesize tool with the configure_tool command and then execute the command with the run_tool command.

```tcl
configure_tool -name {SYNTHESIZE} -params {name:value} [-params {name:value}]
run_tool -name {SYNTHESIZE}
```

The following tables list the parameter names and values.

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLOCK_ASYNC</td>
<td>Integer</td>
<td>Specifies the threshold value for asynchronous pin promotion to a global net. The default is 12.</td>

</tr>
</tbody>
</table>

**run_tool --name {SYNTHESIZE}**

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4

**Example**

```tcl
configure_tool --name {SYNTHESIZE} --params {BLOCK_MODE:false}
  --params {BLOCK_PLACEMENT_CONFLICTS:ERROR} --params
  {BLOCK_ROUTING_CONFLICTS:ERROR} --params {CLOCK_ASYNC:12}
  --params {CLOCK_DATA:5010} --params {CLOCK_GLOBAL:2} --params
  {PA4_GB_MAX_RCLKINT_INSERTION:16} --params
  {PA4_GB_MIN_GB_FANOUT_TO_USE_RCLKINT:299} --params
  {RAM_OPTIMIZED_FOR_POWER:false} --params {RETIMING:false}
  --params {SYNPLIFY_OPTIONS:
    set_option -run_prop_extract 1;
    set_option -maxfan 10000;
    set_option -clock_global_threshold 2;
    set_option -async_global_threshold 12;
    set_option -global_threshold 5000;
    set_option -low_power_ram_decomp 0;}
  --params {SYNPLIFY_TCL_FILE:C:/Users/user1/Desktop/tclflow/synthesis/test.tcl}
```

**Return**

```
run_tool --name {SYNTHESIZE} #Takes no parameters
```

**USER_PROG_DATA (SmartFusion2, IGLOO2)**

**USER_PROG_DATA** is a command tool used in `configure_tool`. `configure_tool --name {USER_PROG_DATA}` sets the Design Version and Silicon Signature in your device.

```tcl
configure_tool --name {USER_PROG_DATA}
  --params {name:value}
  --params {name:value}
```

The following table lists the parameter names and values.
configure_tool –name {USER_PROG_DATA} parameter:value pair

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>design_version</td>
<td>Integer (0 through 65535)</td>
<td>Sets the design version. It must be greater than the Back level version in SPM Update Policy.</td>
</tr>
<tr>
<td>silicon_signature</td>
<td>Hex {&lt;max length 8 Hex characters&gt;}</td>
<td>32-bit (8 hex characters) silicon signature to be programmed into the device. This field can be read from the device using the JTAG USERCODE instruction.</td>
</tr>
</tbody>
</table>

Supported Families
SmartFusion2, IGLOO2

Example
configure_tool -name {USER_PROG_DATA}
-params {design_version:255}
-params {silicon_signature:abcdffff}

Return
Returns 0 on success and 1 on failure.

VERIFYPOWER
VERIFYPOWER is a command tool used in run_tool. The command run_tool passes a script file that contains power-specific Tcl commands to the VERIFYPOWER command and executes it.

run_tool -name {VERIFYPOWER} -script {power_analysis.tcl}

where
<power_analysis.tcl> is a script that contains power-specific Tcl commands. You can include power-specific Tcl commands to generate power reports. See the sample power_analysis Tcl Script below for details.

Return
Returns 0 on success and 1 on failure.

Supported Families
SmartFusion2
IGLOO2
RTG4

Example
run_tool -name {VERIFYPOWER} -script {<power_analysis.tcl>}

Sample power_analysis Tcl Script <power_analysis.tcl>
The following example changes SmartPower operating condition settings from the default to 40C junction temperature and 1.25V VDD.
It then creates a report called A4P5000_uSRAM_POWER_64X18_power_report.txt.
# Change from pre-defined temperature and voltage mode (COM,IND,MIL) to SmartPower custom
smartpower_set_temperature_opcond -use "design"
smartpower_set_voltage_opcond -voltage "VDD" -use "design"

# Set the custom temperature to 40°C ambient temperature.
smartpower_temperature_opcond_set_design_wide -typical 40 -best 40 -worst 40
# Set the custom voltage to 1.25V
smartpower_voltage_opcond_set_design_wide -voltage "VDD" -typical 1.25 -best 1.25 -worst 1.25

**VERIFYTIMING**

VERIFYTIMING is a command tool used in run_tool. Run_tool passes a script file that contains timing-specific Tcl commands to the VERIFYTIMING command and executes it.

```
run_tool -name {VERIFYTIMING} -script {timing.tcl}
```

where

<timing.tcl> is a script that contains SmartTime-specific Tcl commands. You can include SmartTime-specific Tcl commands to create user path sets and to generate timing reports. See sample the Sample SmartTime Tcl Script below for details.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Example**

```
run_tool -name {VERIFYTIMING} -script {<timing.tcl>}
```

**Return**

Returns 0 on success and 1 on failure.

**Sample SmartTime Tcl Script <timing.tcl>**

```
# Create user path set -from B_reg
create_set -name from_B_reg 
  -source {B_reg[*]:CLK} 
  -sink (*)
# Create user set -from A, B, C
create_set -name from_in_ports 
  -source {A B C} 
  -sink (*)
# Generate Timing Reports
report 
  -type timing 
  -analysis min 
  -format text 
  -max_paths 10 
  -print_paths yes 
  -max_expanded_paths 10 
  -include_user_sets yes 
```

SmartTime Tcl Commands

all_inputs

Tcl command; returns an object representing all input and inout pins in the current design.

Arguments

None

Supported Families

SmartFusion2
IGLOO2
RTG4

Exceptions

You can only use this command as part of a –from, -to, or –through argument in the following Tcl commands: `set_min_delay`, `set_max_delay`, `set_multicycle_path`, and `set_false_path`.

Examples

`set_max_delay -from [all_inputs] -to [get_clocks ck1]`

See Also

Tcl documentation conventions

all_outputs

Tcl command; returns an object representing all output and inout pins in the current design.

Arguments

None

Supported Families

SmartFusion2
IGLOO2
RTG4

Exceptions

You can only use this command as part of a –from, -to, or –through argument in the following Tcl commands: `set_min_delay`, `set_max_delay`, `set_multicycle_path`, and `set_false_path`.

Examples

`set_max_delay -from [all_inputs] -to [all_outputs]`
See Also
Tcl documentation conventions

all_registers
Tcl command; returns an object representing register pins or cells in the current scenario based on the given parameters.

```
all_registers [-clock clock_name]
[-async_pins][-output_pins][-data_pins][-clock_pins]
```

Arguments
- **-clock clock_name**
  Specifies the name of the clock domain to which the registers belong. If no clock is specified, all registers in the design will be targeted.
- **-async_pins**
  Lists all register pins that are async pins for the specified clock (or all registers asynchronous pins in the design).
- **-output_pins**
  Lists all register pins that are output pins for the specified clock (or all registers output pins in the design).
- **-data_pins**
  Lists all register pins that are data pins for the specified clock (or all registers data pins in the design).
- **-clock_pins**
  Lists all register pins that are data pins for the specified clock (or all registers clock pins in the design).

Supported Families
- SmartFusion2
- IGLOO2
- RTG4

Exceptions
You can only use this command as part of a –from, -to, or –through argument in the following Tcl commands: set_min_delay, set_max_delay, set_multicycle_path, and set_false_path.

Examples
```
set_max_delay 2.000 -from { ff_m:CLK ff_s2:CLK } -to [all_registers -clock_pins -clock { ff_m:Q }]
```

See Also
Tcl documentation conventions

check_constraints
Tcl command; checks all timing constraints in the current scenario for validity. This command performs the same checks as when the constraint is entered through SDC or Tcl.

```
check_constraints
```

Arguments
- None
Supported Families
SmartFusion2
IGLOO2
RTG4

Example

```
check_constraints
```

**clone_scenario**

Tcl command; creates a new timing scenario by duplicating an existing one. You must provide a unique name (that is, it cannot already be used by another timing scenario).

```
clone_scenario original new_scenario_name
```

**Arguments**

- `original`
  Specifies the name of the source timing scenario to clone (copy). The source must be a valid, existing timing scenario.

- `new_scenario_name`
  Specifies the name of the new scenario to be created.

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Description**

This command creates a timing scenario with the `new_scenario_name`, which includes a copy of all constraints in the original scenario. The new scenario is then added to the list of scenarios.

**Example**

```
clone_scenario primary my_new_scenario
```

**See Also**

create_scenario
delete_scenario
Tcl documentation conventions

**create_clock**

Tcl command; creates a clock constraint on the specified ports/pins, or a virtual clock if no source other than a name is specified.

```
create_clock [-name clock_name] -period period_value
[[-waveform> edge_list][source_objects]]
```

**Arguments**

- `-period period_value`
Specifies the clock period in nanoseconds. The value you specify is the minimum time over which the clock waveform repeats. The period_value must be greater than zero.

- name clock_name

Specifies the name of the clock constraint. You must specify either a clock name or a source.

- waveform edge_list

Specifies the rise and fall times of the clock waveform in ns over a complete clock period. There must be exactly two transitions in the list, a rising transition followed by a falling transition. You can define a clock starting with a falling edge by providing an edge list where fall time is less than rise time. If you do not specify -waveform option, the tool creates a default waveform, with a rising edge at instant 0.0 ns and a falling edge at instant (period_value/2)ns.

source_objects

Specifies the source of the clock constraint. The source can be ports, pins, or nets in the design. If you specify a clock constraint on a pin that already has a clock, the new clock replaces the existing one. You must specify either a source or a clock name.

Supported Families

SmartFusion2
IGLOO2
RTG4

Description

Creates a clock in the current design at the declared source and defines its period and waveform. The static timing analysis tool uses this information to propagate the waveform across the clock network to the clock pins of all sequential elements driven by this clock source. The clock information is also used to compute the slacks in the specified clock domain that drive optimization tools such as place-and-route.

Examples

The following example creates two clocks, one on port CK1 with a period of 6, and the other on port CK2 with a period of 6, a rising edge at 0, and a falling edge at 3:

create_clock -name {my_user_clock} -period 6 CK1
create_clock -name {my_other_user_clock} -period 6 -waveform {0 3} {CK2}

The following example creates a clock on port CK3 with a period of 7, a rising edge at 2, and a falling edge at 4:

create_clock -period 7 -waveform {2 4} [get_ports {CK3}]

See Also

create_generated_clock
Tcl Command Documentation Conventions

create_generated_clock

Tcl command; creates an internally generated clock constraint on the ports/pins and defines its characteristics.

Arguments

- name clock_name

  Specifies the name of the clock constraint.

- source reference_pin
Specifies the reference pin in the design from which the clock waveform is to be derived.

- **divide_by divide_factor**
  Specifies the frequency division factor. For instance if the `divide_factor` is equal to 2, the generated clock period is twice the reference clock period.

- **multiply_by multiply_factor**
  Specifies the frequency multiplication factor. For instance if the `multiply_factor` is equal to 2, the generated clock period is half the reference clock period.

- **invert**
  Specifies that the generated clock waveform is inverted with respect to the reference clock.

- **source**
  Specifies the source of the clock constraint on internal pins of the design. If you specify a clock constraint on a pin that already has a clock, the new clock replaces the existing clock. Only one source is accepted. Wildcards are accepted as long as the resolution shows one pin.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Description**

Creates a generated clock in the current design at a declared source by defining its frequency with respect to the frequency at the reference pin. The static timing analysis tool uses this information to compute and propagate its waveform across the clock network to the clock pins of all sequential elements driven by this source.

The generated clock information is also used to compute the slacks in the specified clock domain that drive optimization tools such as place-and-route.

**Examples**

The following example creates a generated clock on pin U1/reg1:Q with a period twice as long as the period at the reference port CLK.

```
create_generated_clock -name {my_user_clock} -divide_by 2 -source [get_ports {CLK}] U1/reg1:Q
```

The following example creates a generated clock at the primary output of myPLL with a period ¾ of the period at the reference pin clk.

```
create_generated_clock -divide_by 3 -multiply_by 4 -source clk [get_pins {myPLL:CLK1}]
```

**See Also**

- `create_clock`
- `Tcl Command Documentation Conventions`

**create_scenario**

Tcl command; creates a new timing scenario with the specified name. You must provide a unique name (that is, it cannot already be used by another timing scenario).

```
create_scenario name
```

**Arguments**

- **name**
  Specifies the name of the new timing scenario.
**Libero SoC Tcl Commands Reference Guide**

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4

**Description**
A timing scenario is a set of timing constraints used with a design. Scenarios enable you to easily refine the set of timing constraints used for Timing-Driven Place-and-Route, so as to achieve timing closure more rapidly.

This command creates an empty timing scenario with the specified name and adds it to the list of scenarios.

**Example**
```
create_scenario scenario_A
```

**See Also**
- `clone_scenario`
- `Tcl Command Documentation Conventions`

**create_set**
Tcl command; creates a set of paths to be analyzed. Use the arguments to specify which paths to include. To create a set that is a subset of a clock domain, specify it with the `-clock` and `-type` arguments. To create a set that is a subset of an inter-clock domain set, specify it with the `-source_clock` and `-sink_clock` arguments. To create a set that is a subset (filter) of an existing named set, specify the set to be filtered with the `-parent_set` argument.

```
create_set\ -name <name>\ -parent_set <name>\ -type <set_type>\ -clock <clock name>\ -source <clock name>\ -sink <clock name>\ -in_to_out \ -source <port/pin pattern>\ -sink <port/pin pattern>
```

**Arguments**
- `-name <name>`
  Specifies a unique name for the newly created path set.
- `-parent_set <name>`
  Specifies the name of the set to filter from.
- `-clock <clock_name>`
  Specifies that the set is to be a subset of the given clock domain. This argument is valid only if you also specify the `-type` argument.
- `-type <value>`
  Specifies the predefined set type on which to base the new path set. You can only use this argument with the `-clock` argument, not by itself.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>reg_to_reg</td>
<td>Paths between registers in the design</td>
</tr>
<tr>
<td>async_to_reg</td>
<td>Paths from asynchronous pins to registers</td>
</tr>
<tr>
<td>reg_to_async</td>
<td>Paths from registers to asynchronous pins</td>
</tr>
<tr>
<td>external_recovery</td>
<td>The set of paths from inputs to asynchronous pins</td>
</tr>
<tr>
<td>Value</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------</td>
<td>--------------------------------------------------</td>

<td>Paths from input ports to registers</td>
</tr>
<tr>
<td>external_hold</td>
<td>Paths from input ports to registers</td>
</tr>
<tr>
<td>clock_to_out</td>
<td>Paths from registers to output ports</td>
</tr>
</tbody>
</table>

- **-in_to_out**
  Specifies that the set is based on the “Input to Output” set, which includes paths that start at input ports and end at output ports.

- **-source_clock <clock_name>**
  Specifies that the set will be a subset of an inter-clock domain set with the given source clock. You can only use this option with the -sink_clock argument.

- **-sink_clock <clock_name>**
  Specifies that the set will be a subset of an inter-clock domain set with the given sink clock. You can only use this option with the -source_clock argument.

- **-source <port/pin_pattern>**
  Specifies a filter on the source pins of the parent set. If you do not specify a parent set, this option filters all pins in the current design.

- **-sink <port/pin_pattern>**
  Specifies a filter on the sink pins of the parent set. If you do not specify a parent set, this option filters all pins in the current design.

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4

**Examples**

```tcl
create_set -name { my_user_set } -source { C* } -sink { D* }
create_set -name { my_other_user_set } -parent_set { my_user_set } -source { CL* }
create_set -name { adder } -source { ALU_CLOCK } -type { REG_TO_REG } -sink { ADDER* }
create_set -name { another_set } -source_clock { EXTERN_CLOCK } -sink_clock { MY_GEN_CLOCK }
```

**expand_path**

Tcl command; displays expanded path information (path details) for paths. The paths to be expanded are identified by the parameters required to display these paths with list_paths. For example, to expand the first path listed with list_paths -clock (MYCLOCK) -type (register_to_register), use the command expand_path -clock (MYCLOCK) -type (register_to_register). Path details contain the pin name, type, net name, cell name, operation, delay, total delay, and edge as well as the arrival time, required time, and slack. These details are the same as details available in the SmartTime Expanded Path window.

```tcl
expand_path 
-index value 
-set name 
-clock clock name 
-type set_type 
-analysis {max| min}
```
-format \{csv | text\}
-from_clock \texttt{clock name}\n-to_clock \texttt{clock name}\n
**Arguments**

- **-index \texttt{value}**
  Specify the index of the path to be expanded in the list of paths. Default is 1.

- **-analysis \{max | min\}**
  Specify whether the timing analysis is done is max-delay (setup check) or min-delay (hold check). Valid values: max or min.

- **-format \{csv | text\}**
  Specify the list format. It can be either text (default) or csv (comma separated values). The former is suited for display the latter for parsing.

- **-set \texttt{name}**
  Displays a list of paths from the named set. You can either use the -set option to specify a user set by its name or use both -clock and -type to specify a set.

- **-clock \texttt{clock name}**
  Displays the set of paths belonging to the specified clock domain. You can either use this option along with -type to specify a set or use the -set option to specify the name of the set to display.

- **-type \texttt{set_type}**
  Specifies the type of paths in the clock domain to display in a list. You can only use this option with the -clock option. You can either use this option along with -clock to specify a set or use the -set option to specify a set name.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>reg_to_reg</td>
<td>Paths between registers in the design</td>
</tr>
<tr>
<td>external_setup</td>
<td>Path from input ports to registers</td>
</tr>
<tr>
<td>external_hold</td>
<td>Path from input ports to registers</td>
</tr>
<tr>
<td>clock_to_out</td>
<td>Path from registers to output ports</td>
</tr>
<tr>
<td>reg_to_async</td>
<td>Path from registers to asynchronous pins</td>

<tr>
<td>external_recovery</td>
<td>Set of paths from inputs to asynchronous pins</td>
</tr>
<tr>
<td>external_removal</td>
<td>Set of paths from inputs to asynchronous pins</td>
</tr>
<tr>
<td>async_to_reg</td>
<td>Path from asynchronous pins to registers</td>
</tr>
</tbody>
</table>

- **-from_clock \texttt{clock name}**
  Displays a list of timing paths for an inter-clock domain set belonging to the source clock specified. You can only use this option with the -to_clock option, not by itself.

- **-to_clock \texttt{clock name}**
  Displays a list of timing paths for an inter-clock domain set belonging to the sink clock specified. You can only use this option with the -from_clock option, not by itself.

- **-analysis \texttt{name}**
  Specifies the analysis for the paths to be listed. The following table shows the acceptable values for this argument.
<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>maxdelay</td>
<td>Maximum delay analysis</td>
</tr>
<tr>
<td>mindelay</td>
<td>Minimum delay analysis</td>
</tr>
</tbody>
</table>

- **index list_of_indices**
  Specifies which paths to display. The index starts at 1 and defaults to 1. Only values lower than the max_paths option will be expanded.

- **format value**
  Specifies the file format of the output. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>ASCII text format</td>
</tr>
<tr>
<td>csv</td>
<td>Comma separated value file format</td>
</tr>
</tbody>
</table>

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4

**Examples**

**Note**: The following example returns a list of five paths:
```tcl
puts [expand_path -clock {myclock} -type {reg_to_reg}]
puts [expand_path -clock {myclock} -type {reg_to_reg} -index {1 2 3} -format text]
```

**See Also**
- list_paths

**get_cells**

Tcl command; returns an object representing the cells (instances) that match those specified in the pattern argument.
```
geget_cells pattern
```

**Arguments**
- **pattern**
  Specifies the pattern to match the instances to return. For example, "get_cells U18" returns all instances starting with the characters "U18", where "*" is a wildcard that represents any character string.

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4
Description

This command returns a collection of instances matching the pattern you specify. You can only use this command as part of a –from, -to, or –through argument in the following Tcl commands: set_max_delay, set_multicycle_path, and set_false_path.

Examples

```tcl
set_max_delay 2 -from [get_cells {reg*}] -to [get_ports {out}]
set_false_path -through [get_cells {Rblock/muxA}]
```

See Also

- get_clocks
- get_nets
- get_pins
- get_ports

Tcl Command Documentation Conventions

get_clocks

Tcl command; returns an object representing the clock(s) that match those specified in the pattern argument in the current timing scenario.

```
get_clocks pattern
```

Arguments

- `pattern`

  Specifies the pattern to use to match the clocks set in SmartTime.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Description

- If this command is used as a –from argument in either the set maximum (set_max_delay), or set minimum delay (set_min_delay), false path (set_false_path), and multicycle constraints (set_multicycle_path), the clock pins of all the registers related to this clock are used as path start points.
- If this command is used as a –to argument in either the set maximum (set_max_delay), or set minimum delay (set_min_delay), false path (set_false_path), and multicycle constraints (set_multicycle_path), the synchronous pins of all the registers related to this clock are used as path endpoints.

Example

```tcl
set_max_delay -from [get_ports datal] -to \[get_clocks ckl]
```

- create_clock
- create_generated_clock

Tcl Command Documentation Conventions
get_current_scenario

Tcl command; returns the name of the current timing scenario.

Arguments

None

Supported Families

SmartFusion2
IGLOO2
RTG4

Examples

get_current_scenario

See Also

set_current_scenario

Tcl documentation conventions

get_nets

Tcl command; returns an object representing the nets that match those specified in the pattern argument.

Arguments

pattern

Specifies the pattern to match the names of the nets to return. For example, "get_nets N_255*" returns all nets starting with the characters "N_255", where "*" is a wildcard that represents any character string.

Supported Families

SmartFusion2
IGLOO2
RTG4

Description

This command returns a collection of nets matching the pattern you specify. You can only use this command as source objects in create clock (create_clock) or create generated clock (create_generated_clock) constraints and as -through arguments in the set false path, set minimum delay, set maximum delay, and set multicycle path constraints.

Examples

set_max_delay 2 -from [get_ports RDATA1] -through [get_nets {net_chkpl net_chkqi}]
set_false_path -through [get_nets {Tblk/rm/n*}]
create_clock -name mainCLK -period 2.5 [get_nets {cknet}]

create_generated_clock
**set_false_path**

**set_min_delay**

**set_max_delay**

**set_multicycle_path**

*Tcl documentation conventions*

---

**get_pins**

Tcl command; returns an object representing the pin(s) that match those specified in the pattern argument.

```tcl
get_pins pattern
```

**Arguments**

*pattern*

Specifies the pattern to match the pins to return. For example, "get_pins clock_gen**" returns all pins starting with the characters "clock_gen", where "**" is a wildcard that represents any character string.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Example**

```tcl
create_clock -period 10 [get_pins clock_gen/reg2:Q]
```

**See Also**

- create_clock
- create_generated_clock
- set_clock_latency
- set_false_path

- set_max_delay
- set_multicycle_path

*Tcl documentation conventions*

---

**get_ports**

Tcl command; returns an object representing the port(s) that match those specified in the pattern argument.

```tcl
get_ports pattern
```

**Argument**

*pattern*

Specifies the pattern to match the ports.

**Supported Families**

- SmartFusion2
- IGLOO2
RTG4

Example

create_clock -period 10 [get_ports CK1]

**list_disable_timings**

Tcl command; returns the list of disable timing constraints for the current scenario.

**Arguments**

None

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Example**

```tcl
list_disable_timings
```

**See Also**

*list_false_paths*

**list_false_paths**

Tcl command; returns details about all of the false paths in the current timing constraint scenario.

**Arguments**

None

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Examples**

```tcl
puts [list_false_paths]
```

**See Also**

*set_false_path*
*remove_false_path*

[Tcl documentation conventions](#)

**list_generated_clocks**

Tcl command; returns details about all of the generated clock constraints in the current timing constraint scenario.

**Arguments**

None
Supported Families

SmartFusion2
IGLOO2
RTG4

Examples

puts [list_generated_clocks]

See Also

create_generated_clock

Tcl documentation conventions

list_input_delays

Tcl command; returns details about all of the input delay constraints in the current timing constraint scenario.

Arguments

None

Supported Families

SmartFusion2
IGLOO2
RTG4

Examples

puts [list_input_delays]

See Also

set_input_delay
remove_input_delay
Tcl documentation conventions

list_max_delays

Tcl command; returns details about all of the maximum delay constraints in the current timing constraint scenario.

Arguments

None

Supported Families

SmartFusion2
IGLOO2
RTG4
Examples

puts [list_max_delays]

See Also
set_max_delay
remove_max_delay
Tcl documentation conventions

list_min_delays

Tcl command; returns details about all of the minimum delay constraints in the current timing constraint scenario.

list_min_delays

Arguments
None

Supported Families
SmartFusion2
IGLOO2
RTG4

Examples
puts [list_min_delays]

See Also
set_min_delay
remove_min_delay
Tcl documentation conventions

list_multicycle_paths

Tcl command; returns details about all of the multicycle paths in the current timing constraint scenario.

list_multicycle_paths

Arguments
None

Supported Families
SmartFusion2
IGLOO2
RTG4

Examples
puts [list_multicycle_paths]

See Also
set_multicycle_path
list_objects

Tcl command; returns a list of object matching the parameter. Objects can be nets, pins, ports, clocks or instances.

```
list_objects <object>
```

Arguments

Any timing constraint parameter.

Supported Families

SmartFusion2
IGLOO2
RTG4

Example

The following example lists all the inputs in your design:

```
list_objects [all_inputs]
```

You can also use wildcards to filter your list, as in the following command:

```
list_objects [get_ports a*]
```

See Also

Tcl documentation conventions

list_output_delays

Tcl command; returns details about all of the output delay constraints in the current timing constraint scenario.

```
list_output_delays
```

Arguments

None

Supported Families

SmartFusion2
IGLOO2
RTG4

Examples

```
puts [list_output_delays]
```

See Also

set output delay
remove output delay
Tcl documentation conventions
list_paths

Tcl command; returns a list of the $n$ worst paths matching the arguments. The number of paths returned can be changed using the set_options -limit_max_paths <value> command.

```
list_paths
-analysis <max | min>
-format <csv | text>
-set <name>
-clock <clock name>
-type <set_type>
-from_clock <clock name>
-to_clock <clock name>
-in_to_out
-from <port/pin pattern>
-to <port/pin pattern>
```

Arguments

- **-analysis <max | min>**
  Specifies whether the timing analysis is done for max-delay (setup check) or min-delay (hold check). Valid values are: max or min.

- **-format <text | csv>**
  Specifies the list format. It can be either text (default) or csv (comma separated values). Text format is better for display and csv format is better for parsing.

- **-set <name>**
  Returns a list of paths from the named set. You can either use the -set option to specify a user set by its name or use both -clock and -type to specify a set.

- **-clock <clock name>**
  Returns a list of paths from the specified clock domain. This option requires the -type option.

- **-type <set_type>**
  Specifies the type of paths to be included. It can only be used along with -clock. Valid values are:
  - *reg_to_reg* -- Paths between registers
  - *external_setup* -- Path from input ports to data pins of registers
  - *external_hold* -- Path from input ports to data pins of registers
  - *clock_to_out* -- Path from registers to output ports
  - *reg_to_async* -- Path from registers to asynchronous pins of registers
  - *external_recovery* -- Path from input ports to asynchronous pins of registers
  - *external_removal* -- Path from input ports to asynchronous pins of registers
  - *async_to_reg* -- Path from asynchronous pins to registers

- **-from_clock <clock name>**
  Used along with -to_clock to get the list of paths of the inter-clock domain between the two clocks.

- **-to_clock <clock name>**
  Used along with -from_clock to get the list of paths of the inter-clock domain between the two clocks.

- **-in_to_out**
  Used to get the list of path between input and output ports.

- **-from <port/pin pattern>**
  Filter the list of paths to those starting from ports or pins matching the pattern.

- **-to <port/pin pattern>**
  Filter the list of paths to those ending at ports or pins matching the pattern.
Supported Families

SmartFusion2
IGLOO2
RTG4

Example

The following command displays the list of register to register paths of clock domain clk1:

`puts [ list_paths -clock clk1 -type reg_to_reg ]`

See Also

create_set
expand_path
set_options

list_scenarios

Tcl command; returns a list of names of all of the available timing scenarios.

Arguments

None

Supported Families

SmartFusion2
IGLOO2
RTG4

Examples

list_scenarios

See Also

get_current_scenario

Tcl documentation conventions

read_sdc

The read_sdc Tcl command evaluate an SDC file, adding all constraints to the specified scenario (or the current/default one if none is specified). Existing constraints are removed if -add is not specified.

Arguments

- add
Specifies that the constraints from the SDC file will be added on top of the existing ones, overriding them in case of a conflict. If not used, the existing constraints are removed before the SDC file is read.

-scenario scenario_name

Specifies the scenario to add the constraints to. The scenario is created if none exists with this name.

-netlist (user | optimized)

Specifies whether the SDC file contains objects defined at the post-synthesis netlist (user) level or physical (optimized) netlist (used for timing analysis).

-pin_separator sep

Specify the pin separator used in the SDC file. It can be either ':' or '/'.

file name

Specify the SDC file name.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Example

The following command removes all constraints from the current/default scenario and adds all constraints from design.sdc file to it:

read_sdc design.sdc

See Also

write_sdc

remove_all_constraints

Tcl command; removes all timing constraints from analysis.

Arguments

None

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Example

remove_all_constraints

See Also

remove_scenario
remove_clock

Tcl command; removes the specified clock constraint from the current timing scenario.

```
remove_clock -name clock_name| -id constraint_ID
```

**Arguments**

- `-name clock_name`
  Specifies the name of the clock constraint to remove from the current scenario. You must specify either a clock name or an ID.
- `-id constraint_ID`
  Specifies the ID of the clock constraint to remove from the current scenario. You must specify either an ID or a clock name that exists in the current scenario.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Description**

Removes the specified clock constraint from the current scenario. If the specified name does not match a clock constraint in the current scenario, or if the specified ID does not refer to a clock constraint, this command fails.

Do not specify both the name and the ID.

**Exceptions**

You cannot use wildcards when specifying a clock name.

**Examples**

The following example removes the clock constraint named "my_user_clock":

```
remove_clock -name my_user_clock
```

The following example removes the clock constraint using its ID:

```
set clockId [create_clock -name my_user_clock -period 2]
remove_clock -id $clockId
```

**See Also**

- `create_clock`
- `Tcl Command Documentation Conventions`

remove_clock_groups

This Tcl command removes a clock group by name or by ID.

```
remove_clock_groups [-id id# | -name groupname] \
[-physically_exclusive | -logically_exclusive | -asynchronous]
```

**Note:** The exclusive flag is not needed when removing a clock group by ID.

**Arguments**

- `-id id#`
  Specifies the clock group by the ID.
rename groupname

Specifies the clock group by name (to be always followed by the exclusive flag).

[-physically_exclusive | -logically_exclusive | -asynchronous]

Supported Families

SmartFusion2
IGLOO2
RTG4

Example

Removal by group name

remove_clock_groups -name mygroup3 -physically_exclusive

Removal by group ID

remove_clock_groups -id 12

See Also

set_clock_groups
list_clock_groups

remove_clock_latency

Tcl command; removes a clock source latency from the specified clock and from all edges of the clock.

remove_clock_latency {-source clock_name_or_source | -id constraint_ID}

Arguments

-source clock_name_or_source
Specifies either the clock name or source name of the clock constraint from which to remove the clock source latency. You must specify either a clock or source name or its constraint ID.

-id constraint_ID
Specifies the ID of the clock constraint to remove from the current scenario. You must specify either a clock or source name or its constraint ID.

Supported Families

SmartFusion2
IGLOO2
RTG4

Description

Removes a clock source latency from the specified clock in the current scenario. If the specified source does not match a clock with a latency constraint in the current scenario, or if the specified ID does not refer to a clock with a latency constraint, this command fails.

Do not specify both the source and the ID.

Exceptions

You cannot use wildcards when specifying a clock name.

Examples

The following example removes the clock source latency from the specified clock.
remove_clock_latency -source my_clock

See Also
set_clock_latency
Tcl Command Documentation Conventions

remove_clock_uncertainty
Tcl command; removes a clock-to-clock uncertainty from the current timing scenario by specifying either its exact arguments or its ID.

```
remove_clock_uncertainty -from | -rise_from | -fall_from from_clock_list -to | -rise_to | -fall_to to_clock_list -setup {value} -hold {value}
remove_clock_uncertainty -id constraint_ID
```

Arguments

- **-from**
  Specifies that the clock-to-clock uncertainty applies to both rising and falling edges of the source clock list. Only one of the -from, -rise_from, or -fall_from arguments can be specified for the constraint to be valid.

- **-rise_from**
  Specifies that the clock-to-clock uncertainty applies only to rising edges of the source clock list. Only one of the -from, -rise_from, or -fall_from arguments can be specified for the constraint to be valid.

- **-fall_from**
  Specifies that the clock-to-clock uncertainty applies only to falling edges of the source clock list. Only one of the -from, -rise_from, or -fall_from arguments can be specified for the constraint to be valid.

- **from_clock_list**
  Specifies the list of clock names as the uncertainty source.

- **-to**
  Specifies that the clock-to-clock uncertainty applies to both rising and falling edges of the destination clock list. Only one of the -to, -rise_to, or -fall_to arguments can be specified for the constraint to be valid.

- **-rise_to**
  Specifies that the clock-to-clock uncertainty applies only to rising edges of the destination clock list. Only one of the -to, -rise_to, or -fall_to arguments can be specified for the constraint to be valid.

- **-fall_to**
  Specifies that the clock-to-clock uncertainty applies only to falling edges of the destination clock list. Only one of the -to, -rise_to, or -fall_to arguments can be specified for the constraint to be valid.

- **to_clock_list**
  Specifies the list of clock names as the uncertainty destination.

- **-setup**
  Specifies that the uncertainty applies only to setup checks. If none or both -setup and -hold are present, the uncertainty applies to both setup and hold checks.

- **-hold**
  Specifies that the uncertainty applies only to hold checks. If none or both -setup and -hold are present, the uncertainty applies to both setup and hold checks.

- **-id constraint_ID**
  Specifies the ID of the clock constraint to remove from the current scenario. You must specify either the exact parameters to set the constraint or its constraint ID.

Supported Families
SmartFusion2
Description

Removes a clock-to-clock uncertainty from the specified clock in the current scenario. If the specified arguments do not match clocks with an uncertainty constraint in the current scenario, or if the specified ID does not refer to a clock-to-clock uncertainty constraint, this command fails.

Do not specify both the exact arguments and the ID.

Examples

```
remove_clock_uncertainty -from Clk1 -to Clk2
remove_clock_uncertainty -from Clk1 -fall_to { Clk2 Clk3 } -setup
remove_clock_uncertainty 4.3 -fall_from { Clk1 Clk2 } -rise_to *
remove_clock_uncertainty 0.1 -rise_from { get_clocks { Clk1 Clk2 } } -fall_to { Clk3 Clk4 } -setup
remove_clock_uncertainty 5 -rise_from Clk1 -to { get_clocks {*} }
remove_clock_uncertainty -id $clockId
```

See Also

`remove_clock`

`remove_generated_clock`

`set_clock_uncertainty`

remove_disable_timing

Tcl command; removes a disable timing constraint by specifying its arguments, or its ID. If the arguments do not match a disable timing constraint, or if the ID does not refer to a disable timing constraint, the command fails.

```
remove_disable_timing -from value -to value name -id name
```

Arguments

- `-from from_port`
  Specifies the starting port. The `-from` and `-to` arguments must either both be present or both omitted for the constraint to be valid.

- `-to to_port`
  Specifies the ending port. The `-from` and `-to` arguments must either both be present or both omitted for the constraint to be valid.

- `name`
  Specifies the cell name where the disable timing constraint will be removed. It is an error to supply both a cell name and a constraint ID, as they are mutually exclusive. No wildcards are allowed when specifying a clock name, either alone or in an accessor command1.

- `-id name`
  Specifies the constraint name where the disable timing constraint will be removed. It is an error to supply both a cell name and a constraint ID, as they are mutually exclusive. No wildcards are allowed when specifying a clock name, either alone or in an accessor command1.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4
Example

```tcl
remove_disable_timing -from port1 -to port2 -id new_constraint
```

`remove_false_path`

Tcl command; removes a false path from the current timing scenario by specifying either its exact arguments or its ID.

```tcl
remove_false_path [-from from_list] [-to to_list] [-through through_list] [-id constraint_ID]
remove_false_path -id constraint_ID
```

**Arguments**

- `-from from_list`
  Specifies a list of timing path starting points. A valid timing starting point is a clock, a primary input, an inout port, or a clock pin of a sequential cell.
- `-through through_list`
  Specifies a list of pins, ports, cells, or nets through which the disabled paths must pass.
- `-to to_list`
  Specifies a list of timing path ending points. A valid timing ending point is a clock, a primary output, an inout port, or a data pin of a sequential cell.
- `-id constraint_ID`
  Specifies the ID of the false path constraint to remove from the current scenario. You must specify either the exact false path to remove or the constraint ID that refers to the false path constraint to remove.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Description**

Removes a false path from the specified clock in the current scenario. If the arguments do not match a false path constraint in the current scenario, or if the specified ID does not refer to a false path constraint, this command fails.

Do not specify both the false path arguments and the constraint ID.

**Exceptions**

You cannot use wildcards when specifying a clock name, either alone or in an Accessor command such as `get_pins` or `get_ports`.

**Examples**

The following example specifies all false paths to remove:

```tcl
remove_false_path -through U0/U1:Y
```

The following example removes the false path constraint using its ID:

```tcl
set fpId [set_false_path -from [get_clocks c*] -through {topx/reg/*} -to [get_ports out15] ]
remove_false_path -id $fpId
```

**See Also**

- `set_false_path`
- [Tcl Command Documentation Conventions](#)
remove_generated_clock

Tcl command; removes the specified generated clock constraint from the current scenario.

```
remove_generated_clock {-name clock_name | -id constraint_ID }
```

**Arguments**

- **-name clock_name**
  Specifies the name of the generated clock constraint to remove from the current scenario. You must specify either a clock name or an ID.

- **-id constraint_ID**
  Specifies the ID of the generated clock constraint to remove from the current scenario. You must specify either an ID or a clock name that exists in the current scenario.

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Description**

Removes the specified generated clock constraint from the current scenario. If the specified name does not match a generated clock constraint in the current scenario, or if the specified ID does not refer to a generated clock constraint, this command fails.

Do not specify both the name and the ID.

**Exceptions**

You cannot use wildcards when specifying a generated clock name.

**Examples**

The following example removes the generated clock constraint named "my_user_clock":

```
remove_generated_clock -name my_user_clock
```

**See Also**

create_generated_clock
Tcl Command Documentation Conventions

remove_input_delay

Tcl command; removes an input delay a clock on a port by specifying both the clocks and port names or the ID of the input_delay constraint to remove.

```
remove_input_delay -clock clock_name port_pin_list
remove_input_delay -id constraint_ID
```

**Arguments**

- **-clock clock_name**
  Specifies the clock name to which the specified input delay value is assigned.

- **port_pin_list**
  Specifies the port names to which the specified input delay value is assigned.

- **-id constraint_ID**
  Specifies the ID of the input delay constraint to remove.
Specifies the ID of the clock with the input_delay value to remove from the current scenario. You must specify either both a clock name and list of port names or the input_delay constraint ID.

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4

**Description**
Removes an input delay from the specified clocks and port in the current scenario. If the clocks and port names do not match an input delay constraint in the current scenario, or if the specified ID does not refer to an input delay constraint, this command fails.

Do not specify both the clock and port names and the constraint ID.

**Exceptions**
You cannot use wildcards when specifying a clock name, either alone or in an accessor command.

**Examples**
The following example removes the input delay from CLK1 on port data1:
```
remove_input_delay -clock [get_clocks CLK1] [get_ports data1]
```

**See Also**
- set_input_delay
- Tcl Command Documentation Conventions

**remove_max_delay**
Tcl command; removes a maximum delay constraint from the current timing scenario by specifying either its exact arguments or its ID.
```
remove_max_delay [-from from_list] [-to to_list] [-through through_list]
remove_max_delay -id constraint_ID
```

**Arguments**
- **-from from_list**
  Specifies a list of timing path starting points. A valid timing starting point is a clock, a primary input, an inout port, or a clock pin of a sequential cell.
- **-through through_list**
  Specifies a list of pins, ports, cells, or nets through which the disabled paths must pass.
- **-to to_list**
  Specifies a list of timing path ending points. A valid timing ending point is a clock, a primary output, an inout port, or a data pin of a sequential cell.
- **-id constraint_ID**
  Specifies the ID of the maximum delay constraint to remove from the current scenario. You must specify either the exact maximum delay arguments to remove or the constraint ID that refers to the maximum delay constraint to remove.

**Supported Families**
- SmartFusion2
- IGLOO2
RTG4

Description
Removes a maximum delay value from the specified clock in the current scenario. If the arguments do not match a maximum delay constraint in the current scenario, or if the specified ID does not refer to a maximum delay constraint, this command fails.
Do not specify both the maximum delay arguments and the constraint ID.

Exceptions
You cannot use wildcards when specifying a clock name, either alone or in an Accessor command.

Examples
The following example specifies a range of maximum delay constraints to remove:
remove_max_delay -through U0/1:Y

See Also
set_max_delay
Tcl Command Documentation Conventions

remove_min_delay
Tcl command; removes a minimum delay constraint in the current timing scenario by specifying either its exact arguments or its ID.

```
remove_min_delay [-from from_list] [-to to_list] [-through through_list]
remove_min_delay -id constraint_ID
```

Arguments

- `-from from_list`
  Specifies a list of timing path starting points. A valid timing starting point is a clock, a primary input, an inout port, or a clock pin of a sequential cell.
- `-through through_list`
  Specifies a list of pins, ports, cells, or nets through which the disabled paths must pass.
- `-to to_list`
  Specifies a list of timing path ending points. A valid timing ending point is a clock, a primary output, an inout port, or a data pin of a sequential cell.
- `-id constraint_ID`
  Specifies the ID of the minimum delay constraint to remove from the current scenario. You must specify either the exact minimum delay arguments to remove or the constraint ID that refers to the minimum delay constraint to remove.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Description
Removes a minimum delay value from the specified clock in the current scenario. If the arguments do not match a minimum delay constraint in the current scenario, or if the specified ID does not refer to a minimum delay constraint, this command fails.
Do not specify both the minimum delay arguments and the constraint ID.

**Exceptions**

You cannot use wildcards when specifying a clock name, either alone or in an accessor command.

**Examples**

The following example specifies a range of minimum delay constraints to remove:

```
remove_min_delay -through U0/U1:Y
```

**See Also**

`set_min_delay`

[Tcl Command Documentation Conventions](#)

**remove_multicycle_path**

Tcl command; removes a multicycle path constraint in the current timing scenario by specifying either its exact arguments or its ID.

```
remove_multicycle_path [-from from_list] [-to to_list] [-through through_list]
remove_multicycle_path -id constraint_ID
```

**Arguments**

- `-from from_list`
  Specifies a list of timing path starting points. A valid timing starting point is a clock, a primary input, an inout port, or a clock pin of a sequential cell.

- `-through through_list`
  Specifies a list of pins, ports, cells, or nets through which the disabled paths must pass.

- `-to to_list`
  Specifies a list of timing path ending points. A valid timing ending point is a clock, a primary output, an inout port, or a data pin of a sequential cell.

- `-id constraint_ID`
  Specifies the ID of the multicycle path constraint to remove from the current scenario. You must specify either the exact multicycle path arguments to remove or the constraint ID that refers to the multicycle path constraint to remove.

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Description**

Removes a multicycle path from the specified clock in the current scenario. If the arguments do not match a multicycle path constraint in the current scenario, or if the specified ID does not refer to a multicycle path constraint, this command fails.

Do not specify both the multicycle path arguments and the constraint ID.

**Exceptions**

You cannot use wildcards when specifying a clock name, either alone or in an accessor command.
Examples

The following example removes all paths between reg1 and reg2 to 3 cycles for setup check.

```
remove_multicycle_path -from [get_pins {reg1}] -to [get_pins {reg2}]
```

See Also

- `set_multicycle_path`
- `Libero SoC Tcl Commands Reference Guide`

remove_output_delay

Tcl command; removes an output delay by specifying both the clocks and port names or the ID of the output_delay constraint to remove.

```
remove_output_delay -clock clock_name port_pin_list
remove_output_delay -id constraint_ID
```

Arguments

- `clock clock_name`
  Specifies the clock name to which the specified output delay value is assigned.
- `port_pin_list`
  Specifies the port names to which the specified output delay value is assigned.
- `id constraint_ID`
  Specifies the ID of the clock with the output_delay value to remove from the current scenario. You must specify either both a clock name and list of port names or the output_delay constraint ID.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Description

Removes an output delay from the specified clocks and port in the current scenario. If the clocks and port names do not match an output delay constraint in the current scenario, or if the specified ID does not refer to an output delay constraint, this command fails.

Do not specify both the clock and port names and the constraint ID.

Exceptions

You cannot use wildcards when specifying a clock name, either alone or in an accessor command.

Examples

The following example removes the output delay from CLK1 on port out1:

```
remove_output_delay -clock [get_clocks CLK1] [get_ports out1]
```

See Also

- `set_output_delay`
- `Libero SoC Tcl Commands Reference Guide`

remove_scenario

Tcl command; removes a scenario from the constraint database.
remove_scenario <name>

Arguments

name
Specifies the name of the scenario to delete.

Supported Families

SmartFusion2
IGLOO2
RTG4

Example

The following command removes the scenario named my_scenario:
remove_scenario my_scenario

See Also

create_scenario

remove_set

Tcl command; removes a set of paths from analysis. Only user-created sets can be deleted.

remove_set -name name

Parameters

-name name
Specifies the name of the set to delete.

Supported Families

SmartFusion2
IGLOO2
RTG4

Example

The following command removes the set named my_set:
remove_set -name my_set

See Also

create_set

rename_scenario

Tcl command; renames an existing timing scenario to a new name. You must provide a unique name (that is, it cannot already be used by another timing scenario) for the new name.

rename_scenario old_name new_name
### Arguments

old_name

Specifies the name of the existing timing scenario to be renamed.

new_name

Specifies the new name for the scenario.

### Supported Families

- SmartFusion2
- IGLOO2
- RTG4

### Description

This command renames an existing scenario name to a new name.

### Example

rename_scenario my_old_scenario my_new_scenario

### See Also

- create_scenario
- delete_scenario
- Tcl documentation conventions

### report

Tcl command; specifies the type of reports to generate and what to include in the reports.

```
report -type (timing | timing_violations | datasheet | bottleneck | constraints_coverage | combinational_loops)
     -analysis <max_or_min>
     -format (csv|text)
     <filename>
     timing options
     -max_parallel_paths <number>
     -max_paths <number>
     -print_summary (yes|no)
     -use_slack_threshold (yes|no)
     -slack_threshold <double>
     -print_paths (yes|no)
     -max_expanded_paths <number>
     -include_user_sets (yes|no)
     -include_clock_domains (yes|no)
     -select_clock_domains <clock name list>
     -limit_max_paths (yes|no)
     -include_pin_to_pin (yes|no)
     bottleneck options
     -cost_type (path_count|path_cost)
     -max_instances <number>
     -from <port/pin pattern>
     -to <port/pin pattern>
     -set_type <set_type>
     -set_name <set name>
     -clock <clock name>
     -from_clock <clock name>
```
-to_clock <clock name>
in_to_out

Arguments

- **-type**

<table>
<thead>

  Specifies the file name for the generated report.

Timing Options and Values

<table>
<thead>
<tr>
<th>Parameter/Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-max_parallel_paths &lt;number&gt;</td>
<td>Specifies the max number of parallel paths. Parallel paths are timing paths with the same start and end points.</td>
</tr>
<tr>
<td>-max_paths &lt;number&gt;</td>
<td>Specifies the max number of paths to display for each set. This value is a positive integer value greater than zero. Default is 100.</td>
</tr>
<tr>
<td>-print_summary &lt;yes</td>
<td>no&gt;</td>
</tr>
<tr>
<td>-use_slack_threshold &lt;yes</td>
<td>no&gt;</td>
</tr>
<tr>
<td>-slack_threshold &lt;double&gt;</td>
<td>Specifies the threshold value to consider when reporting path slacks. This value is in nanoseconds (ns). By default, there is no threshold (all slacks reported).</td>
</tr>
</tbody>
</table>
### Parameter/Value

<table>
<thead>

</thead>
<tbody>
<tr>
<td>-from_clock &lt;clock name&gt;</td>
<td>Reports only bottleneck instances that lie on violating timing paths of the inter-clock domain that starts at the source clock specified by this option. This option can only be used in combination with -to_clock.</td>
</tr>
<tr>
<td>-to_clock &lt;clock name&gt;</td>
<td>Reports only instances that lie on violating paths that end at locations specified by this option.</td>
</tr>
<tr>
<td>-in_to_out</td>
<td>Reports only instances that lie on violating paths that begin at input ports and end at output ports.</td>
</tr>
</tbody>
</table>

### Supported Families

- SmartFusion2
- IGLOO2
- RTG4

### Example

The following example generates a timing violation report named timing_viol.txt. The report considers an analysis using maximum delays and does not filter paths based on slack threshold. It reports two paths per section and one expanded path per section.

```tcl
report -type timing_violations \
   -analysis max -use_slack_threshold no \
   -limit_max_paths -yes \
   -max_paths 2 \ 
   -max_expanded_paths 1\ 
timing_viol.txt
```

### save

Tcl command; saves all changes made prior to this command. This includes changes made on constraints, options and sets.

```tcl
save
```

### Arguments

- None
Supported Families
SmartFusion2
IGLOO2
RTG4

Example
The following script sets the maximum number of paths reported by list_paths to 10, reads an SDC file, and save both the option and the constraints into the design project:

```
set_options -limit_max_paths 10
read_sdc somefile.sdc
save
```

See Also
set_options

set_clock_groups
set_clock_groups is an SDC command which disables timing analysis between the specified clock groups. No paths are reported between the clock groups in both directions. Paths between clocks in the same group continue to be reported.

```
set_clock_groups [-name name]
    [-physically_exclusive | -logically_exclusive | -asynchronous]
    [-comment comment_string]
    -group clock_list
```

Note: If you use the same name and the same exclusive flag of a previously defined clock group to create a new clock group, the previous clock group is removed and a new one is created in its place.

Arguments
- name name
  Name given to the clock group. Optional.
- physically_exclusive
  Specifies that the clock groups are physically exclusive with respect to each other. Examples are multiple clocks feeding a register clock pin. The exclusive flags are all mutually exclusive. Only one can be specified.
- logically_exclusive
  Specifies that the clocks groups are logically exclusive with respect to each other. Examples are clocks passing through a mux.
- asynchronous
  Specifies that the clock groups are asynchronous with respect to each other, as there is no phase relationship between them. The exclusive flags are all mutually exclusive. Only one can be specified.

Note: The exclusive flags for the arguments above are all mutually exclusive. Only one can be specified.
- group clock_list
  Specifies a list of clocks. There can any number of groups specified in the set_clock_groups command.

Supported Families
SmartFusion2
IGLOO2
RTG4
Example

```tcl
set_clock_groups -name mygroup3 -physically_exclusive
-group [get_clocks clk_1] -group [get_clocks clk_2]
```

See Also

- `list_clock_groups`
- `remove_clock_groups`

---

### set_clock_latency

Tcl command; defines the delay between an external clock source and the definition pin of a clock within SmartTime.

```tcl
set_clock_latency -source [ -rise ] [ -fall ] [ -early ] [ -late ] delay clock
```

**Arguments**

- `-source`
  
  Specifies the source latency on a clock pin, potentially only on certain edges of the clock.

- `-rise`
  
  Specifies the edge for which this constraint will apply. If neither or both rise are passed, the same latency is applied to both edges.

- `-fall`
  
  Specifies the edge for which this constraint will apply. If neither or both rise are passed, the same latency is applied to both edges.

- `-invert`
  
  Specifies that the generated clock waveform is inverted with respect to the reference clock.

- `-late`
  
  Optional. Specifies that the latency is late bound on the latency. The appropriate bound is used to provide the most pessimistic timing scenario. However, if the value of `-late` is less than the value of `-early`, optimistic timing takes place which could result in incorrect analysis. If neither or both `-early` and `-late` are provided, the same latency is used for both bounds, which results in the latency having no effect for single clock domain setup and hold checks.

- `-early`
  
  Optional. Specifies that the latency is early bound on the latency. The appropriate bound is used to provide the most pessimistic timing scenario. However, if the value of `-late` is less than the value of `-early`, optimistic timing takes place which could result in incorrect analysis. If neither or both `-early` and `-late` are provided, the same latency is used for both bounds, which results in the latency having no effect for single clock domain setup and hold checks.

- `delay`
  
  Specifies the latency value for the constraint.

- `clock`
  
  Specifies the clock to which the constraint is applied. This clock must be constrained.

---

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

---

**Description**

Clock source latency defines the delay between an external clock source and the definition pin of a clock within SmartTime. It behaves much like an input delay constraint. You can specify both an "early" delay...
and a "late" delay for this latency, providing an uncertainty which SmartTime propagates through its calculations. Rising and falling edges of the same clock can have different latencies. If only one value is provided for the clock source latency, it is taken as the exact latency value, for both rising and falling edges.

Examples

The following example sets an early clock source latency of 0.4 on the rising edge of main_clock. It also sets a clock source latency of 1.2, for both the early and late values of the falling edge of main_clock. The late value for the clock source latency for the falling edge of main_clock remains undefined.

```csv
set_clock_latency -source -rise -early 0.4 { main_clock }
set_clock_latency -source -fall 1.2 { main_clock }
```

See Also

create_clock
create_generated_clock
Tcl Command Documentation Conventions

**set_clock_to_output**

SDC command; defines the timing budget available inside the FPGA for an output relative to a clock.

```csv
set_clock_to_output delay_value -clock clock_ref [-max] [-min] output_list
```

Arguments

- **delay_value**
  Specifies the clock to output delay in nanoseconds. This time represents the amount of time available inside the FPGA between the active clock edge and the data change at the output port.

- **clock clock_ref**
  Specifies the reference clock to which the specified clock to output is related. This is a mandatory argument.

- **-max**
  Specifies that delay_value refers to the maximum clock to output at the specified output. If you do not specify –max or –min options, the tool assumes maximum and minimum clock to output delays to be equal.

- **-min**
  Specifies that delay_value refers to the minimum clock to output at the specified output. If you do not specify –max or –min options, the tool assumes maximum and minimum clock to output delays to be equal.

- **output_list**
  Provides a list of output ports in the current design to which delay_value is assigned. If you need to specify more than one object, enclose the objects in braces ({}).
set_clock_uncertainty

Tcl command; specifies simple clock uncertainty for single clock and clock-to-clock uncertainty between two clocks (from and to).

set_clock_uncertainty [-setup] [-hold] uncertainty [object_list -from from_clock | -rise_from rise_from_clock | -fall_from fall_from_clock -to to_clock | -rise_to rise_to_clock | -fall_to fall_to_clock]

Arguments

uncertainty
Specifies the time in nanoseconds that represents the amount of variation between two clock edges.

object_list
Specifies a list of clocks, ports, or pins for simple uncertainty; the uncertainty is applied either to destination flops clocked by one of the clocks in the object_list option, or destination flops whose clock pins are in the fanout of a port or a pin specified in the object_list option.

-from
Specifies that the clock-to-clock uncertainty applies to both rising and falling edges of the source clock list. Only one of the -from, -rise_from, or -fall_from arguments can be specified for the constraint to be valid.

-rise_from
Specifies that the clock-to-clock uncertainty applies only to rising edges of the source clock list. Only one of the -from, -rise_from, or -fall_from arguments can be specified for the constraint to be valid.

-fall_from
Specifies that the clock-to-clock uncertainty applies only to falling edges of the source clock list. Only one of the -from, -rise_from, or -fall_from arguments can be specified for the constraint to be valid.

from_clock/rise_from_clock/fall_from_clock
Specifies the list of clock names as the uncertainty source.

-to
Specifies that the clock-to-clock uncertainty applies to both rising and falling edges of the destination clock list. Only one of the -to, -rise_to, or -fall_to arguments can be specified for the constraint to be valid.

-rise_to
Specifies that the clock-to-clock uncertainty applies only to rising edges of the destination clock list. Only one of the -to, -rise_to, or -fall_to arguments can be specified for the constraint to be valid.

-fall_to
Specifies that the clock-to-clock uncertainty applies only to falling edges of the destination clock list. Only one of the -to, -rise_to, or -fall_to arguments can be specified for the constraint to be valid.

to_clock/rise_to_clock/fall_to_clock
Specifies the list of clock names as the uncertainty destination.

-setup
Specifies that the uncertainty applies only to setup checks. If none or both -setup and -hold are present, the uncertainty applies to both setup and hold checks.

-hold
Specifies that the uncertainty applies only to hold checks. If none or both -setup and -hold are present, the uncertainty applies to both setup and hold checks.

Supported Families

SmartFusion2
IGLOO2
RTG4
Description

The `set_clock_uncertainty` command sets the timing uncertainty between two clock waveforms or maximum clock skew. Timing between clocks have no uncertainty unless you specify it.

Examples

Simple Clock Uncertainty constraint examples:

```tcl
set_clock_uncertainty 2
set_clock_uncertainty 2 [get_clocks clk]
```

Clock to Clock Uncertainty constraint examples:

```tcl
set_clock_uncertainty 10 -from Clk1 -to Clk2
set_clock_uncertainty 0 -from Clk1 -fall_to { Clk2 Clk3 } -setup
set_clock_uncertainty 4.3 -fall_from { Clk1 Clk2 } -rise_to *
set_clock_uncertainty 0.1 -rise_from { get_clocks { Clk1 Clk2 } } -fall_to { Clk3 Clk4 } -setup
set_clock_uncertainty 5 -rise_from Clk1 -to [ get_clocks { * } ]
```

set_current_scenario

Tcl command; specifies the timing scenario for the Timing Analyzer to use. All commands that follow this command will apply to the specified timing scenario.

```tcl
set_current_scenario name
```

Arguments

- **name**
  
  Specifies the name of the timing scenario to which to apply all commands from this point on.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Description

A timing scenario is a set of timing constraints used with a design. If the specified scenario is already the current one, this command has no effect.

After setting the current scenario, constraints can be listed, added, or removed, the checker can be invoked on the set of constraints, and so on.

This command uses the specified timing scenario to compute timing analysis.

Example

```tcl
set_current_scenario scenario_A
```

See Also

- `get_current_scenario`

Tcl Command Documentation Conventions

set_disable_timing

Tcl command; disables timing arcs within a cell and returns the ID of the created constraint if the command succeeded.
set_disable_timing -from value -to value name

Arguments

- **from** from_port
  Specifies the starting port. The –from and –to arguments must either both be present or both omitted for the constraint to be valid.

- **to** to_port
  Specifies the ending port. The –from and –to arguments must either both be present or both omitted for the constraint to be valid.

- **name**
  Specifies the cell name where the timing arcs will be disabled.

Supported Families

SmartFusion2
IGLOO2
RTG4

Example

set_disable_timing -from A -to Y a2

See Also

Tcl documentation conventions

set_external_check

SDC command; defines the external setup and hold delays for an input relative to a clock.

set_external_check delay_value -clock clock_ref [-setup] [-hold] input_list

Arguments

- **delay_value**
  Specifies the external setup or external hold delay in nanoseconds. This time represents the amount of time available inside the FPGA for the specified input after a clock edge.

- **clock** clock_ref
  Specifies the reference clock to which the specified external check is related. This is a mandatory argument.

- **-setup** or **-hold**
  Specifies that delay_value refers to the setup/hold check at the specified input. This is a mandatory argument if –hold is not used. You must specify either the -setup or -hold option.

- **input_list**
  Provides a list of input ports in the current design to which delay_value is assigned. If you need to specify more than one object, enclose the objects in braces ({}).

Supported Families

SmartFusion2
IGLOO2
RTG4
**set_false_path**

Tcl command; identifies paths that are considered false and excluded from the timing analysis in the current timing scenario.

```
set_false_path [-ignore_errors] [-from from_list] [-through through_list] [-to to_list]
```

**Arguments**

- **-ignore_errors**
  Specifies to avoid reporting errors for derived constraints targeting the logic that becomes invalid due to logic optimization. It is an optional argument. Some IPs may have extra logic present depending on other IPs used in the design but the synthesis tool will remove this logic if fewer IPs were used. In such cases, the implementation flow will halt without -ignore_errors flag.

  **Note:** It is not recommended to use this flag outside similar use cases.

- **-from from_list**
  Specifies a list of timing path starting points. A valid timing starting point is a clock, a primary input, an inout port, or a clock pin of a sequential cell.

- **-through through_list**
  Specifies a list of pins, ports, cells, or nets through which the disabled paths must pass.

- **-to to_list**
  Specifies a list of timing path ending points. A valid timing ending point is a clock, a primary output, an inout port, or a data pin of a sequential cell.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Description**

The `set_false_path` command identifies specific timing paths as being false. The false timing paths are paths that do not propagate logic level changes. This constraint removes timing requirements on these false paths so that they are not considered during the timing analysis. The path starting points are the input ports or register clock pins, and the path ending points are the register data pins or output ports. This constraint disables setup and hold checking for the specified paths.

The false path information always takes precedence over multiple cycle path information and overrides maximum delay constraints. If more than one object is specified within one -through option, the path can pass through any objects.

You must specify at least one of the -from, -to, or -through arguments for this constraint to be valid.

**Examples**

The following example specifies all paths from clock pins of the registers in clock domain clk1 to data pins of a specific register in clock domain clk2 as false paths:

```
set_false_path -from [get_clocks {clk1}] -to reg_2:D
```

The following example specifies all paths through the pin U0/U1:Y to be false:

```
set_false_path -through U0/U1:Y
```

The following example specifies a derived false path constraint through the pin PCIe_Demo_0/SYSRESET_POR/POWER_ON_RESET_N

```
set_false_path -ignore_errors -through [ get_pins {PCIe_Demo_0/SYSRESET_POR/POWER_ON_RESET_N } ]
```

**See Also**

- [Tcl Command Documentation Conventions](#)
set_input_delay

Tcl command; creates an input delay on a port list by defining the arrival time of an input relative to a clock in the current scenario.

```
set_input_delay delay_value -clock clock_ref [-max] [-min] [-clock_fall] input_list
```

**Arguments**

- `delay_value`
  Specifies the arrival time in nanoseconds that represents the amount of time for which the signal is available at the specified input after a clock edge.

- `-clock clock_ref`
  Specifies the clock reference to which the specified input delay is related. This is a mandatory argument. If you do not specify `-max` or `-min` options, the tool assumes the maximum and minimum input delays to be equal.

- `-max`
  Specifies that `delay_value` refers to the longest path arriving at the specified input. If you do not specify `-max` or `-min` options, the tool assumes maximum and minimum input delays to be equal.

- `-min`
  Specifies that `delay_value` refers to the shortest path arriving at the specified input. If you do not specify `-max` or `-min` options, the tool assumes maximum and minimum input delays to be equal.

- `-clock_fall`
  Specifies that the delay is relative to the falling edge of the clock reference. The default is the rising edge.

- `input_list`
  Provides a list of input ports in the current design to which `delay_value` is assigned. If you need to specify more than one object, enclose the objects in braces ({}).

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Description**

The `set_input_delay` command sets input path delays on input ports relative to a clock edge. This usually represents a combinational path delay from the clock pin of a register external to the current design. For in/out (bidirectional) ports, you can specify the path delays for both input and output modes. The tool adds input delay to path delay for paths starting at primary inputs.

A clock is a singleton that represents the name of a defined clock constraint. This can be:

- a single port name used as source for a clock constraint
- a single pin name used as source for a clock constraint; for instance `reg1:CLK`. This name can be hierarchical (for instance `toplevel/block1/reg2:CLK`)
- an object accessor that will refer to one clock: `[get_clocks {clk}]`

**Examples**

The following example sets an input delay of 1.2ns for port `data1` relative to the rising edge of `CLK1`:

```
set_input_delay 1.2 -clock (get_clocks CLK1) (get_ports data1)
```

The following example sets a different maximum and minimum input delay for port `IN1` relative to the falling edge of `CLK2`:

```
set_input_delay 1.0 -clock_fall -clock CLK2 -min {IN1}
set_input_delay 1.4 -clock_fall -clock CLK2 -max {IN1}
```
**set_max_delay**

Tcl command; specifies the maximum delay for the timing paths in the current scenario.

```
set_max_delay delay_value [-from from_list] [-to to_list] [-through through_list]
```

**Arguments**

- **delay_value**
  Specifies a floating point number in nanoseconds that represents the required maximum delay value for specified paths.
  - If the path starting point is on a sequential device, the tool includes clock skew in the computed delay.
  - If the path starting point has an input delay specified, the tool adds that delay value to the path delay.
  - If the path ending point is on a sequential device, the tool includes clock skew and library setup time in the computed delay.
  - If the ending point has an output delay specified, the tool adds that delay to the path delay.
- **-from from_list**
  Specifies a list of timing path starting points. A valid timing starting point is a clock, a primary input, an inout port, or a clock pin of a sequential cell.
- **-to to_list**
  Specifies a list of timing path ending points. A valid timing ending point is a clock, a primary output, an inout port, or a data pin of a sequential cell.
- **-through through_list**
  Specifies a list of pins, ports, cells, or nets through which the timing paths must pass.

**Supported Families**

See the [Tcl Commands and Supported Families](#) table for the list of families that support this command.

**Description**

This command specifies the required maximum delay for timing paths in the current design. The path length for any startpoint in from_list to any endpoint in to_list must be less than delay_value.

The timing engine automatically derives the individual maximum delay targets from clock waveforms and port input or output delays.

The maximum delay constraint is a timing exception. This constraint overrides the default single cycle timing relationship for one or more timing paths. This constraint also overrides a multicycle path constraint.

You must specify at least one of the -from, -to, or -through arguments for this constraint to be valid.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4
Examples

The following example sets a maximum delay by constraining all paths from ff1a:CLK or ff1b:CLK to ff2e:D with a delay less than 5 ns:

```
set_max_delay 5 -from {ff1a:CLK ff1b:CLK} -to {ff2e:D}
```

The following example sets a maximum delay by constraining all paths to output ports whose names start by “out” with a delay less than 3.8 ns:

```
set_max_delay 3.8 -to [get_ports out*]
```

See Also

- `set_min_delay`
- `remove_max_delay`
- Tcl Command Documentation Conventions

### set_min_delay

Tcl command; specifies the minimum delay for the timing paths in the current scenario.

```
set_min_delay delay_value [-from from_list] [-to to_list] [-through through_list]
```

#### Arguments

- `delay_value`
  
  Specifies a floating point number in nanoseconds that represents the required minimum delay value for specified paths.

  - If the path starting point is on a sequential device, the tool includes clock skew in the computed delay.
  - If the path starting point has an input delay specified, the tool adds that delay value to the path delay.
  - If the path ending point is on a sequential device, the tool includes clock skew and library setup time in the computed delay.
  - If the ending point has an output delay specified, the tool adds that delay to the path delay.

- `-from from_list`
  
  Specifies a list of timing path starting points. A valid timing starting point is a clock, a primary input, an inout port, or a clock pin of a sequential cell.

- `-to to_list`
  
  Specifies a list of timing path ending points. A valid timing ending point is a clock, a primary output, an inout port, or a data pin of a sequential cell.

- `-through through_list`
  
  Specifies a list of pins, ports, cells, or nets through which the timing paths must pass.

#### Supported Families

See the Tcl Commands and Supported Families table for the list of families that support this command.

#### Description

This command specifies the required minimum delay for timing paths in the current design. The path length for any startpoint in from_list to any endpoint in to_list must be less than delay_value.

The timing engine automatically derives the individual minimum delay targets from clock waveforms and port input or output delays.

The minimum delay constraint is a timing exception. This constraint overrides the default single cycle timing relationship for one or more timing paths. This constraint also overrides a multicycle path constraint.
You must specify at least one of the -from, -to, or -through arguments for this constraint to be valid.

### Supported Families

- SmartFusion2
- IGLOO2
- RTG4

### Examples

The following example sets a minimum delay by constraining all paths from ff1a:CLK or ff1b:CLK to ff2e:D with a delay less than 5 ns:

```tcl
set_min_delay 5 -from {ff1a:CLK ff1b:CLK} -to {ff2e:D}
```

The following example sets a minimum delay by constraining all paths to output ports whose names start by "out" with a delay less than 3.8 ns:

```tcl
set_min_delay 3.8 -to [get_ports out*]
```

### See Also

- `set_max_delay`
- `remove_min_delay`
- Tcl Command Documentation Conventions

### set_multicycle_path

Tcl command; defines a path that takes multiple clock cycles in the current scenario.

```tcl
set_multicycle_path ncycles [-setup] [-hold] [-from from_list][-through through_list][-to to_list]
```

### Arguments

- `ncycles`
  
  Specifies an integer value that represents a number of cycles the data path must have for setup or hold check. The value is relative to the starting point or ending point clock, before data is required at the ending point.
  
  - `setup`
    
    Optional. Applies the cycle value for the setup check only. This option does not affect the hold check. The default hold check will be applied unless you have specified another set_multicycle_path command for the hold value.
    
    - `hold`
      
      Optional. Applies the cycle value for the hold check only. This option does not affect the setup check.

  **Note:** If you do not specify "-setup" or "-hold", the cycle value is applied to the setup check and the default hold check is performed (`ncycles -1`).

- `from from_list`
  
  Specifies a list of timing path starting points. A valid timing starting point is a clock, a primary input, an inout port, or a clock pin of a sequential cell.

- `through through_list`
  
  Specifies a list of pins or ports through which the multiple cycle paths must pass.

- `to to_list`
  
  Specifies a list of timing path ending points. A valid timing ending point is a clock, a primary output, an inout port, or a data pin of a sequential cell.
Description

Setting multiple cycle paths constraint overrides the single cycle timing relationships between sequential elements by specifying the number of cycles that the data path must have for setup or hold checks. If you change the multiplier, it affects both the setup and hold checks.

False path information always takes precedence over multiple cycle path information. A specific maximum delay constraint overrides a general multiple cycle path constraint.

If you specify more than one object within one -through option, the path passes through any of the objects.

You must specify at least one of the -from, -to, or -through arguments for this constraint to be valid.

Exceptions

Multiple priority management is not supported in Microsemi SoC designs. All multiple cycle path constraints are handled with the same priority.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Examples

The following example sets all paths between reg1 and reg2 to 3 cycles for setup check. Hold check is measured at the previous edge of the clock at reg2.

```
set_multicycle_path 3 -from [get_pins {reg1}] -to [get_pins {reg2}]
```

The following example specifies that four cycles are needed for setup check on all paths starting at the registers in the clock domain ck1. Hold check is further specified with two cycles instead of the three cycles that would have been applied otherwise.

```
set_multicycle_path 4 -setup -from [get_clocks {ck1}]
set_multicycle_path 2 -hold -from [get_clocks {ck1}]
```

See Also

- remove_multicycle_path
- Tcl Command Documentation Conventions

set_options

SmartTime-specific Tcl command; sets options for timing analysis. Some options will also affect timing-driven place-and-route. The same parameters can be changed in the SmartTime Options dialog box in the SmartTime GUI.

```
set_options
[-max_opcond value ]
[-min_opcond value]
[-interclockdomain_analysis value]
[-use_bibuf_loopbacks value]
[-enable_recovery_removal_checks value]
[-break_at_async value]
[-filter_when_slack_below value]
[-filter_when_slack_above value]
[-remove_slack_filters]
[-limit_max_paths value]
[-expand_clock_network value]
[-expand_parallel_paths value]
[-analysis_scenario value]
```
[-tdpr_scenario value]
[-reset]

**Arguments**

- **-max_opcond** value
  Sets the operating condition to use for Maximum Delay Analysis.
  The acceptable Values for max_opcode for SmartFusion2, IGLOO2 and RTG4 is shown in the below table. Default is worst.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>worst</td>
<td>Use Worst Case conditions for Maximum Delay Analysis</td>
</tr>
<tr>
<td>typical</td>
<td>Use Typical conditions for Maximum Delay Analysis</td>
</tr>
<tr>
<td>best</td>
<td>Use Best Case conditions for Maximum Delay Analysis</td>
</tr>
</tbody>
</table>

- **-min_opcond** value
  Sets the operating condition to use for Minimum Delay Analysis.
  The acceptable Values for min_opcode for SmartFusion2, IGLOO2 and RTG4 is shown in the below table. Default is best.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>best</td>
<td>Use Best Case conditions for Minimum Delay Analysis</td>
</tr>
<tr>
<td>typical</td>
<td>Use Typical conditions for Minimum Delay Analysis</td>
</tr>
<tr>
<td>worst</td>
<td>Use Worst Case conditions for Minimum Delay Analysis</td>
</tr>
</tbody>
</table>

- **-interclockdomain_analysis** value
  Enables or disables inter-clock domain analysis. Default is yes.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>yes</td>
<td>Enables inter-clock domain analysis</td>
</tr>
<tr>
<td>no</td>
<td>Disables inter-clock domain analysis</td>
</tr>
</tbody>
</table>

- **-use_bibuf_loopbacks** value
  Instructs the timing analysis whether to consider loopback path in bidirectional buffers (D->Y, E->Y)as false-path (no). Default is yes; i.e., loopback are false paths.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>yes</td>
<td>Enables loopback in bibufs</td>
</tr>
<tr>
<td>no</td>
<td>Disables loopback in bibufs</td>
</tr>
</tbody>
</table>

- **-enable_recovery_removal_checks** value
  Enables recovery checks to be included in max-delay analysis and removal checks in min-delay analysis. Default is yes.
<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>yes</td>
<td>Enables recovery and removal checks</td>
</tr>
<tr>
<td>no</td>
<td>Disables recovery and removal checks</td>
</tr>
</tbody>
</table>

**Value** | **Description**
--- | ---
yes | Enables recovery and removal checks
no | Disables recovery and removal checks

**-break_at_async value**
Specifies whether or not timing analysis is allowed to cross asynchronous pins (clear, reset of sequential elements). Default is no.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>yes</td>
<td>Enables breaking paths at asynchronous ports</td>
</tr>
<tr>
<td>no</td>
<td>Disables breaking paths at asynchronous ports</td>
</tr>
</tbody>
</table>

**-filter_when_slack_below value**
Specifies a minimum slack value for paths reported by list_paths. Not set by default.

**-filter_when_slack_above value**
Specifies a maximum slack value for paths reported by list_paths. Not set by default.

**-remove_slack_filters**
Removes the slack minimum and maximum set using -filter_when_slack_below and filter_when_slack_above.

**-limit_max_paths value**
Specifies the maximum number of paths reported by list_paths. Default is 100.

**-expand_clock_network value**
Specify whether or not clock network details are reported in expand_path. Default is yes.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>yes</td>
<td>Enables expanded clock network information in paths</td>
</tr>
<tr>
<td>no</td>
<td>Disables expanded clock network information in paths</td>
</tr>
</tbody>
</table>

**-expand_parallel_paths value**
Specify the number of parallel paths (paths with the same ends) to include in expand_path. Default is 1.

**-analysis_scenario value**
Specify the constraint scenario to be used for timing analysis. Default is Primary, the default scenario.

**-tdpr_scenario value**
Specify the constraint scenario to be used for timing-driven place-and-route. Default is Primary, the default scenario.

**-reset**
Reset all options to the default values, except those for analysis and TDPR scenarios, which remain unchanged.

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4
Examples

The following script commands the timing engine to use best operating conditions for both max-delay analysis and min-delay analysis:

```
set_options -max_opcond {best} -min_opcond {best}
```

The following script changes the scenario used by timing-driven place-and-route and saves the change in the Libero project for place-and-route tools to see the change.

```
set_options -tdpr_scenario {My_TDPR_Scenario}
```

See Also

```
save
```

### set_output_delay

Tcl command; defines the output delay of an output relative to a clock in the current scenario.

```
set_output_delay [-max] [-min] delay_value -clock clock_ref [-clock_fall] output_list
```

#### Arguments

- **-max**
  Specifies that delay_value refers to the longest path from the specified output. If you do not specify -max or -min options, the tool assumes the maximum and minimum output delays to be equal.

- **-min**
  Specifies that delay_value refers to the shortest path from the specified output. If you do not specify -max or -min options, the tool assumes the maximum and minimum output delays to be equal.

- **delay_value**
  Specifies the amount of time before a clock edge for which the signal is required. This represents a combinational path delay to a register outside the current design plus the library setup time (for maximum output delay) or hold time (for minimum output delay).

- **-clock clock_ref**
  Specifies the clock reference to which the specified output delay is related. This is a mandatory argument.

- **-clock_fall**
  Specifies that the delay is relative to the falling edge of the clock reference. The default is the rising edge.

- **output_list**
  Provides a list of output ports in the current design to which delay_value is assigned. If you need to specify more than one object, enclose the objects in braces ({}).

#### Supported Families

- SmartFusion2
- IGLOO2
- RTG4

#### Description

The `set_output_delay` command sets output path delays on output ports relative to a clock edge. Output ports have no output delay unless you specify it. For in/out (bidirectional) ports, you can specify the path delays for both input and output modes. The tool adds output delay to path delay for paths ending at primary outputs.

#### Examples

The following example sets an output delay of 1.2ns for port OUT1 relative to the rising edge of CLK1:

```
set_output_delay 1.2 -clock [get_clocks CLK1] [get_ports OUT1]
```
The following example sets a different maximum and minimum output delay for port OUT1 relative to the falling edge of CLK2:

```tcl
set_output_delay -min {OUT1} 1.0 -clock_fall -clock CLK2
set_output_delay -max {OUT1} 1.4 -clock_fall -clock CLK2
```

See Also

- `remove_output_delay`
- `set_input_delay`

Tcl Command Documentation Conventions

**write_sdc**

Tcl command; writes timing constraints into an SDC file. If multiple constraint scenarios are defined, `-scenario` allows the user to specify which scenario to write. By default, the current scenario is written.

```tcl
write_sdc
-scenario scenario name
-pin_separator (; | /)
-file name
```

**Arguments**

- `-scenario scenario name`
  Specify the scenario to write. By default the current scenario is used.
- `-pin_separator sep`
  Specify the pin separator used in the SDC file. It can be either `;` or `/`.
- `-file name`
  Specify the SDC file name.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Example**

The following script merges two SDC files and writes the result into a third SDC file:

```tcl
read_sdc first.sdc
read_sdc -add second.sdc
write_sdc merged.sdc
```

See Also

- `read_sdc`, `set_current_scenario`
- `VERIFYTIMING` (SmartFusion2, IGLOO2, RTG4)
SmartPower Tcl Commands

smartpower_add_new_scenario
Tcl command; creates a new scenario.

smartpower_add_new_scenario -name {value} -description {value} -mode {value}

Arguments
- name {value}
  Specifies the name of the new scenario.
- description {value}
  Specifies the description of the new scenario.
- mode {<operating mode>:<duration>+}
  Specifies the mode(s) and duration(s) for the specified scenario.

Supported Families
  SmartFusion2
  IGLOO2
  RTG4

Examples
  This example creates a new scenario called myscenario:
  smartpower_add_new_scenario -name "MyScenario" -mode "Custom_1:50.00"
  "Custom_2:25.00" -mode "Active:25.00"

smartpower_add_pin_in_domain
Tcl command; adds a pin into a clock or set domain.

smartpower_add_pin_in_domain -pin_name {pin_name} -pin_type {value} -domain_name {domain_name} -domain_type {value}

Arguments
- pin_name {pin_name}
  Specifies the name of the pin to add to the domain.
- pin_type {value}
  Specifies the type of the pin to add. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>clock</td>
<td>The pin to add is a clock pin</td>
</tr>
<tr>
<td>data</td>
<td>The pin to add is a data pin</td>
</tr>
</tbody>
</table>
-domain_name {domain_name}
  Specifies the name of the domain in which to add the specified pin.
-domain_type {value}
  Specifies the type of domain in which to add the specified pin. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>clock</td>
<td>The domain is a clock domain</td>
</tr>
<tr>
<td>set</td>
<td>The domain is a set domain</td>
</tr>
</tbody>
</table>

Supported Families
- SmartFusion2
- IGLOO2
- RTG4

Notes
- The domain_name must be a name of an existing domain.
- The pin_name must be a name of a pin that exists in the design.

Examples
The following example adds a clock pin to an existing Clock domain:
```
smartpower_add_pin_in_domain -pin_name {XCMP3/U0/U1:Y} -pin_type {clock} -domain_name {clk1} -domain_type {clock}
```

The following example adds a data pin to an existing Set domain:
```
smartpower_add_pin_in_domain -pin_name {XCMP3/U0/U1:Y} -pin_type {data} -domain_name {myset} -domain_type {set}
```

See Also
- Tcl documentation conventions
- smartpower_remove_pin_of_domain

smartpower_battery_settings
This SmartPower Tcl command sets the battery capacity in SmartPower. The battery capacity is used to compute the battery life of your design.
```
smartpower_battery_settings -capacity {decimal value}
```

Parameters
- -capacity {decimal value}
  Value must be a positive decimal.
  This parameter is mandatory.

Exceptions
None
Returns

This command does not return a value.

Supported Families

SmartFusion2
IGLOO2
RTG4

Usage

The following table lists the parameters for the command, their types, and the values they can be set to.

<table>
<thead>
<tr>
<th>smartpower_batter settings</th>
<th>Type</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>capacity</td>
<td>Decimal</td>
<td>Positive decimal</td>
<td>Specify the battery capacity in mA*Hours</td>
</tr>
</tbody>
</table>

Example

This example sets the battery capacity to 1800 mA * Hours.

smartpower_battery_settings -capacity {1800}

smartpower_change_clock_statistics

Tcl command; changes the default frequencies and probabilities for a specific domain.

smartpower_change_clock_statistics -domain_name {value} -clocks_freq {value} -clocks_proba {value} -registers_freq {value} -registers_proba {value} -set_reset_freq {value} -set_reset_proba {value} -primaryinputs_freq {value} -primaryinputs_proba {value} -combinational_freq {value} -combinational_proba {value}

Arguments

-domain_name {value}
Specifies the domain name in which to initialize frequencies and probabilities.

-clocks_freq {value}
Specifies the user input frequency in Hz, KHz, or MHz for all clocks.

-clocks_proba {value}
Specifies the user input probability in % for all clocks.

-registers_freq {value}
Specifies the user input frequency (in Hz, KHz, or MHz) or the toggle rate (in %). If the unit is not provided and toggle rate is active, the value is handled as a toggle rate; if toggle rate is not active, the value is handled as a frequency.

-registers_proba {value}
Specifies the user input probability in % for all registers.

-set_reset_freq {value}
Specifies the user input frequency (in Hz, KHz, or MHz) or the toggle rate (in %). If the unit is not provided and toggle rate is active, the value is handled as a toggle rate; if toggle rate is not active, the value is handled as a frequency.

-set_reset_proba {value}
Specifies the user input probability in % for all set/reset nets.

-primaryinputs_freq {value}
Specifies the user input frequency (in Hz, KHz, or MHz) or the toggle rate (in %). If the unit is not provided and toggle rate is active, the value is handled as a toggle rate; if toggle rate is not active, the value is handled as a frequency.

-`primaryinputs_proba {value}`

Specifies the user input probability in % for all primary inputs.

-`combinational_freq {value}`

Specifies the user input frequency (in Hz, KHz, or MHz) or the toggle rate (in %). If the unit is not provided and toggle rate is active, the value is handled as a toggle rate; if toggle rate is not active, the value is handled as a frequency.

-`combinational_proba {value}`

Specifies the user input probability in % for all combinational combinational output.

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Note:** This command is associated with the functionality of [Initialize frequencies and probabilities](#) dialog box.

**Examples**

The following example initializes all clocks with:

```
smartpower_change_clock_statistics -domain_name {my_domain} -clocks_freq {10 MHz} -
clocks_proba {20} -registers_freq {10 MHz} -registers_proba {20} -set_reset_freq {10
MHz} -set_reset_proba {20} -primaryinputs_freq {10 MHz} -primaryinputs_proba {20} -
combinational_freq {10 MHz} -combinational_proba {20}
```

**See Also**

[Tcl documentation conventions](#)

---

### smartpower_change_setofpin_statistics

Tcl command; changes the default frequencies and probabilities for a specific set.

```
smartpower_change_setofpin_statistics -domain_name {value} -data_freq {value} -
data_proba {value}
```

**Arguments**

-`domain_name{value}`

Specifies the domain name in which to initialize data frequencies and probabilities.

-`data_freq {value}`

Specifies the user input data frequency in Hz, KHz, or MHz for all sets of pins.

-`data_proba {value}`

Specifies the user input data probability in % for all sets of pins.

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Notes**

This command is associated with the functionality of [Initialize frequencies and probabilities](#) dialog box.
Examples

The following example initializes all clocks with:

```tcl
smartpower_change_setofpin_statistics -domain_name {my_domain} -data_freq {10 MHz} -data_proba {20}
```

See Also

Tcl documentation conventions

smartpower_commit

Tcl command; saves the changes to the design (.adb) file.

```
smartpower_commit
```

Arguments

None

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Examples

```
smartpower_commit
```

See Also

Tcl documentation conventions

smartpower_restore

smartpower_compute_vectorless

This Tcl command executes a vectorless analysis of the current operating mode.

Arguments

None

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Example

```
smartpower_compute_vectorless
```

See Also

Tcl Command Documentation Conventions
smartpower_create_domain

Tcl command; creates a new clock or set domain.

```
smartpower_create_domain -domain_type {value} -domain_name {domain_name}
```

**Arguments**

- **-domain_type {value}**
  Specifies the type of domain to create. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>clock</td>
<td>The domain is a clock domain</td>
</tr>
<tr>
<td>set</td>
<td>The domain is a set domain</td>
</tr>
</tbody>
</table>

- **-domain_name {domain_name}**
  Specifies the name of the new domain.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Notes**

The *domain name* cannot be the name of an existing domain.
The *domain type* must be either clock or set.

**Examples**

The following example creates a new clock domain named "clk2" :

```
smartpower_create_domain -domain_type {clock} -domain_name {clk2}
```

The following example creates a new set domain named "myset" :

```
smartpower_create_domain -domain_type {set} -domain_name {myset}
```

**See Also**

- [Tcl documentation conventions](#)
- [smartpower_remove_domain](#)

smartpower_edit_scenario

Tcl command; edits a scenario.

```
smartpower_edit_scenario -name {value} -description {value} -mode {value} -new_name {value}
```

**Arguments**

- **-name {value}**
  Specifies the name of the scenario.

- **-description {value}**
  Specifies the description of the scenario.

- **-mode {<operating mode>:<duration>}**
Specifies the mode(s) and duration(s) for the specified scenario.

- **new_name** \{value\}

Specifies the new name for the scenario

### Supported Families

- SmartFusion2
- IGLOO2
- RTG4

### Examples

This example edits the name of myscenario to finalscenario:

```
smartpower_edit_scenario -name myscenario -new_name finalscenario
```

### See Also

*Tcl documentation conventions*

### smartpower_import_vcd

This SmartPower Tcl command imports into SmartPower a VCD file generated by a simulation tool. SmartPower extracts the frequency and probability information from the VCD.

```
import_vcd -file "VCD file" [-opmode "mode name"] [-with_vectorless "TRUE | FALSE"] [-partial_parse "TRUE | FALSE"] [-start_time "decimal value"] [-end_time "decimal value"] [-auto_detect_top_level_name "TRUE | FALSE"] [-top_level_name "top level name"] [-glitch_filtering "false | auto | true"] [-glitch_threshold "integer value"] [-stop_time "decimal value"]
```

### Parameters

- **-file** "VCD file"
  Value must be a file path. This parameter is mandatory.

- **-opmode** "mode name"
  Value must be a string. This parameter is optional.

- **-with_vectorless** "TRUE | FALSE"
  Value must be a boolean. This parameter is optional.

- **-partial_parse** "TRUE | FALSE"
  Value must be a boolean. This parameter is optional.

- **-start_time** "decimal value"
  Value must be a positive decimal. This parameter is optional.

- **-end_time** "decimal value"
  Value must be a positive decimal. This parameter is optional.

- **-auto_detect_top_level_name** "TRUE | FALSE"
  Value must be a boolean. This parameter is optional.

- **-top_level_name** "top level name"
  Value must be a string. This parameter is optional.

- **-glitch_filtering** "false | auto | true"
  Value must be one of false | auto | true. This parameter is optional.

- **-glitch_threshold** "integer value"
  Value must be a positive integer. This parameter is optional.
**Exceptions**
None

**Returns**
This command does not return a value.

**Usage**
This section lists all the parameters for the command, their types, and the values they can be set to. The default value is always listed first.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Values</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>smartpower_import_vcd</td>
<td></td>
<td>Path to a VCD file</td>
<td>Path to a VCD file.</td>

<td>Integer</td>
<td>Positive integer</td>
<td>Specify the threshold in ps below which glitches are filtered out.</td>
</tr>
</tbody>
</table>

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Examples**

The Tcl command below imports the power.vcd file generated by the simulator into SmartPower:

```tcl
smartpower_import_vcd -file "../../simulation/power.vcd"
```

The Tcl command below extracts information between 1ms and 2ms in the simulation, and stores the information into a custom mode:

```tcl
smartpower_import_vcd -file "../../simulation/power.vcd" -partial_parse TRUE -start_time 1000000 -end_time 2000000 -opmode "power_1ms_to_2ms"
```

**smartpower_init_do**

Tcl command; initializes the frequencies and probabilities for clocks, registers, set/reset nets, primary inputs, combinational outputs, enables and other sets of pins, and selects a mode for initialization.

```tcl
smartpower_init_do -with {value} -opmode {value} -clocks {value} -registers {value} -set_reset {value} -primaryinputs {value} -combinational {value} -enables {value} -othersets {value}
```

**Arguments**

- `-with {value}`
  
  This sets the option of initializing frequencies and probabilities with vectorless analysis or with fixed values. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>vectorless</td>
<td>Initializes frequencies and probabilities with vectorless analysis</td>
</tr>
<tr>
<td>fixed</td>
<td>Initializes frequencies and probabilities with fixed values</td>
</tr>
</tbody>
</table>

- `-opmode {value}`
  
  Optional; specifies the mode in which to initialize frequencies and probabilities. The value must be Active or Flash*Freeze.

- `-clocks {value}`
  
  This sets the option of initializing frequencies and probabilities for all clocks. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Initializes frequencies and probabilities for all clocks</td>
</tr>
<tr>
<td>false</td>
<td>Does not initialize frequencies and probabilities for all clocks</td>
</tr>
</tbody>
</table>

- `-registers {value}`
This sets the option of initializing frequencies and probabilities for all registers. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Initializes frequencies and probabilities for all registers</td>
</tr>
<tr>
<td>false</td>
<td>Does not initialize frequencies and probabilities for all registers</td>
</tr>
</tbody>
</table>

```-set_reset {value}
```

This sets the option of initializing frequencies and probabilities for all set/reset nets. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Initializes frequencies and probabilities for all set/reset nets</td>
</tr>
<tr>
<td>false</td>
<td>Does not initialize frequencies and probabilities for all set/reset nets</td>
</tr>
</tbody>
</table>

```-primaryinputs{value}
```

This sets the option of initializing frequencies and probabilities for all primary inputs. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Initializes frequencies and probabilities for all primary inputs</td>
</tr>
<tr>
<td>false</td>
<td>Does not initialize frequencies and probabilities for all primary inputs</td>
</tr>
</tbody>
</table>

```-combinational {value}
```

This sets the option of initializing frequencies and probabilities for all combinational outputs. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Initializes frequencies and probabilities for all combinational outputs</td>
</tr>
<tr>
<td>false</td>
<td>Does not initialize frequencies and probabilities for all combinational outputs</td>
</tr>
</tbody>
</table>

```-enables {value}
```

This sets the option of initializing frequencies and probabilities for all enable sets of pins. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Initializes frequencies and probabilities for all enable sets of pins</td>
</tr>
<tr>
<td>false</td>
<td>Does not initialize frequencies and probabilities for all enable sets of pins</td>
</tr>
</tbody>
</table>

```-othersets {value}
```

This sets the option of initializing frequencies and probabilities for all other sets of pins. The following table shows the acceptable values for this argument:
### Supported Families

- SmartFusion2
- IGLOO2
- RTG4

**Note:** This command is associated with the functionality of *Initialize frequencies and probabilities* dialog box.

### Examples

The following example initializes all clocks with:

```bash
smartpower_init_do -with {vectorless} -opmode {my_mode} -clocks {true} -registers {true} -asynchronous {true} -primaryinputs {true} -combinational {true} -enables {true} -othersets {true}
```

### See Also

- [Tcl documentation conventions](#)

### smartpower_init_set_clocks_options

Tcl command; initializes the clock frequency options of all clock domains.

```bash
smartpower_init_set_clocks_options -with_clock_constraints {value} -with_default_values {value} -freq {value} -duty_cycle {value}
```

### Arguments

- `-with_clock_constraints {value}`
  
  This sets the option of initializing the clock frequencies with frequency constraints from SmartTime. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Sets initialize clock frequencies with clock constraints ON</td>
</tr>
<tr>
<td>false</td>
<td>Sets initialize clock frequencies with clock constraints OFF</td>
</tr>
</tbody>
</table>

- `-with_default_values {value}`
  
  This sets the option of initializing the clock frequencies with a user input default value. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Sets initialize clock frequencies with default values ON</td>
</tr>
<tr>
<td>false</td>
<td>Sets initialize clock frequencies with default values OFF</td>
</tr>
</tbody>
</table>

- `-freq {value}`
Specifies the user input frequency in Hz, KHz, or MHz.

-duty_cycle {value}

Specifies the user input duty cycles in %.

Supported Families

SmartFusion2
IGLOO2
RTG4

Notes

This command is associated with the functionality of Initialize frequencies and probabilities dialog box.

Examples

The following example initializes all clocks after executing smartpower_init_do with -clocks {true}:
smartpower_init_set_clocks_options -with_clock_constraints {true} -with_default_values {true} -freq {10 MHz} -duty_cycle {20}

See Also

Tcl documentation conventions

smartpower_init_set_combinational_options

Tcl commands; initializes the frequency and probability of all combinational outputs.

smartpower_init_set_combinational_options -freq {value} -proba {value}

Arguments

-freq {value}

Specifies the user input frequency (in Hz, KHz, or MHz) or the toggle rate (in %). If the unit is not provided and toggle rate is active, the value is handled as a toggle rate; if toggle rate is not active, the value is handled as a frequency.

-proba {value}

Specifies the user input probability in %.

Supported Families

SmartFusion2
IGLOO2
RTG4

Notes

This command is associated with the functionality of Initialize frequencies and probabilities dialog box.

Examples

The following example initializes all combinational signals after executing smartpower_init_do with -combinational {true}:
smartpower_init_set_combinational_options -freq {10 MHz} -proba {20}

See Also

Tcl documentation conventions
smartpower_init_set_enables_options

Tcl command; initializes the clock frequency of all enable clocks with the initialization options.

```
smartpower_init_set_enables_options -freq {value} -proba {value}
```

**Arguments**

- **-freq {value}**
  Specifies the user input frequency (in Hz, KHz, or MHz).
- **-proba {value}**
  Specifies the user input probability in %.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Notes**

This command is associated with the functionality of `Initialize frequencies and probabilities` dialog box.

**Examples**

The following example initializes all clocks after executing `<command>` with `-enables {true}`:

```
smartpower_init_set_enables_options -freq {10 MHz} -proba {20}
```

**See Also**

Tcl documentation conventions

---

smartpower_init_set_primaryinputs_options

Tcl command; initializes the frequency and probability of all primary inputs.

```
smartpower_init_set_primaryinputs_options -freq {value} -proba {value}
```

**Arguments**

- **-freq {value}**
  Specifies the user input frequency (in Hz, KHz, or MHz) or the toggle rate (in %). If the unit is not provided and toggle rate is active, the value is handled as a toggle rate; if toggle rate is not active, the value is handled as a frequency.
- **-proba {value}**
  Specifies the user input probability in %.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Notes**

This command is associated with the functionality of `Initialize frequencies and probabilities` dialog box.
Examples

The following example initializes all primary inputs after executing `smartpower_init_do` with `-primaryinputs {true}:

```tcl
smartpower_init_set_primaryinputs_options -freq {10 MHz} -proba {20}
```

See Also

`Tcl documentation conventions`

smartpower_init_set_registers_options

Tcl command; initializes the frequency and probability of all register outputs.

```tcl
smartpower_init_set_registers_options -freq {value} -proba {value}
```

Arguments

- `-freq {value}`
  Specifies the user input frequency (in Hz, KHz, or MHz) or the toggle rate (in %). If the unit is not provided and toggle rate is active, the value is handled as a toggle rate; if toggle rate is not active, the value is handled as a frequency.
- `-proba {value}`
  Specifies the user input probability in %.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Notes

This command is associated with the functionality of `Initialize frequencies and probabilities` dialog box.

Exceptions

None

Examples

The following example initializes all register outputs after executing `smartpower_init_do` with `-registers {true}:

```tcl
smartpower_init_set_registers_options -freq {10 MHz} -proba {20}
```

See Also

`Tcl documentation conventions`

smartpower_init_setofpins_values

Tcl command; initializes the frequency and probability of all sets of pins.

```tcl
smartpower_init_setofpins_values -domain_name {name} -freq {value} -proba {value}
```

Arguments

- `-domain_name {name}`
Specifies the set of pins that will be initialized. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IOsEnableSet</td>
<td>Specifies that the IOsEnableSet set of pins will be initialized</td>
</tr>
<tr>
<td>MemoriesEnableSet</td>
<td>Specifies that the MemoriesEnableSet set of pins will be initialized</td>
</tr>
</tbody>
</table>

- \texttt{freq \{value\}}
  Specifies the user input frequency in Hz, MHz, or KHz.
- \texttt{proba \{value\}}
  Specifies the user input probability in %.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Notes**

This command is associated with the functionality of \texttt{Initialize frequencies and probabilities} dialog box.

**Examples**

The following example initializes all primary inputs after executing \texttt{smartpower\_init\_do} with \texttt{-othersets \{true\}}:

\begin{verbatim}
smartpower\_init\_setofpins\_values -domain_name \{IOsEnableSet\} -freq \{10 MHz\} -proba \{20\}
\end{verbatim}

**See Also**

\texttt{Tcl documentation conventions}

\texttt{smartpower\_remove\_all\_annotations}

Tcl command; Removes all initialization annotations for the specified mode.

\begin{verbatim}
smartpower\_remove\_all\_annotations -opmode \{value\}
\end{verbatim}

**Arguments**

- \texttt{-opmode \{value\}}
  Removes all initialization annotations for the specified mode, where value must be Active or Flash\*Freeze.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Notes**

This command is associated with the functionality of \texttt{Initialize frequencies and probabilities} dialog box.
Examples

The following example initializes all clocks with opmode Active:

smartpower_remove_all_annotations -opmode {Active}

See Also

Tcl documentation conventions

smartpower_remove_file

Tcl command; removes a VCD file from the specified mode or all operating mode. Frequency and probability information of signals annotated by the VCD are set back to the default value.

Arguments

-file {value}
Specifies the file to be removed. This is mandatory.
-format VCD
Specifies that the type to be removed is a VCD file. This is mandatory.
[-opmode {value}]
Specifies the operating mode. This is optional. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Active</td>
<td>The operating mode is set to active</td>
</tr>
<tr>
<td>Standby</td>
<td>The operating mode is set to Static</td>
</tr>
<tr>
<td>Flash*Freeze</td>
<td>The operating mode is set to Flash*Freeze</td>
</tr>
</tbody>
</table>

Supported Families

SmartFusion2
IGLOO2
RTG4

Examples

This example removes the file test.vcd from the Active mode.

smartpower_remove_file -file "test.vcd" -format VCD -opmode "Active"

This example removes the VCD file power1.vcd from all operating modes:

smartpower_remove_file -file "power1.vcd" -format VCD

See Also

Tcl documentation conventions
smartpower_remove_pin_probability

Tcl command; removes the probability value associated with a specific pin. This pin will have a default probability based on the domain set it belongs to.

```
smartpower_remove_pin_probability -pin_name {pin_name}
```

**Arguments**

- `-pin_name {pin_name}`
  Specifies the name of the pin with the probability to remove. This pin must be the direct driver of an enable pin.

**Supported Families**

SmartFusion2, IGLOO2, RTG4, PolarFire

**Examples**

The following example removes the probability of the pin driving the enable pin of a bidirectional I/O:

```
smartpower_remove_pin_probability -pin_name mybibuf/U0/U1:EOUT
```

**See Also**

Tcl documentation conventions
smartpower_set_pin_probability

smartpower_remove_scenario

Tcl command; removes a scenario from the current design.

```
smartpower_remove_scenario -name {value}
```

**Arguments**

- `-name {value}`
  Specifies the name of the scenario.

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Examples**

This example removes a scenario from the current design:

```
smartpower_remove_scenario -name myscenario
```

**See Also**

Tcl documentation conventions

smartpower_report_power

Tcl command; creates a Power report, which enables you to determine if you have any power consumption problems in your design. It includes information about the global device and SmartPower preferences selection, and hierarchical detail (including gates, blocks, and nets), with a block-by-block, gate-by-gate, and net-by-net power summary SmartPower results.

{filename}

Arguments

-powerunit [value]
Specifies the unit in which power is set. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>W</td>
<td>The power unit is set to watts</td>
</tr>
<tr>
<td>mW</td>
<td>The power unit is set to milliwatts</td>
</tr>
<tr>
<td>uW</td>
<td>The power unit is set to microwatts</td>
</tr>
</tbody>
</table>

-frequint [value]
Specifies the unit in which frequency is set. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hz</td>
<td>The frequency unit is set to hertz</td>
</tr>
</tbody>
</table>
kHz
The frequency unit is set to kilohertz

MHz
The frequency unit is set to megahertz

-`opcond {value}`
Specifies the operating condition. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>worst</td>
<td>The operating condition is set to worst case</td>
</tr>
<tr>
<td>typical</td>
<td>The operating condition is set to typical case</td>
</tr>
<tr>
<td>best</td>
<td>The operating condition is set to best case</td>
</tr>
</tbody>
</table>

-`opmode {value}`
Specifies the operating mode. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Active</td>
<td>The operating mode is set to Active</td>
</tr>
<tr>
<td>Standby</td>
<td>The operating mode is set to Standby</td>
</tr>
<tr>
<td>Flash*Freeze</td>
<td>The operating mode is set to Flash*Freeze</td>
</tr>
</tbody>
</table>

-`toggle {value}`
Specifies the toggle. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>The toggle is set to true</td>
</tr>
<tr>
<td>false</td>
<td>The toggle is set to false</td>
</tr>
</tbody>
</table>

-`power_summary {value}`
Specifies whether to include the power summary, which shows the static and dynamic values in the report. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Includes the power summary in the report</td>
</tr>
<tr>
<td>false</td>
<td>Does not include the power summary in the report</td>
</tr>
</tbody>
</table>

-`rail_breakdown {value}`
Specifies whether to include the breakdown by rail summary in the report. The following table shows the acceptable values for this argument:
### Value Description

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Includes the breakdown by rail summary in the report</td>
</tr>
<tr>
<td>false</td>
<td>Does not include the breakdown by rail summary in the report</td>
</tr>
</tbody>
</table>

**-type_breakdown** *(value)*

Specifies whether to include the breakdown by type summary in the report. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Includes the breakdown by type summary in the report</td>
</tr>
<tr>
<td>false</td>
<td>Does not include the breakdown by type summary in the report</td>
</tr>
</tbody>
</table>

**-clock_breakdown** *(value)*

Specifies whether to include the breakdown by clock domain in the report. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Includes the breakdown by clock domain summary in the report</td>
</tr>
<tr>
<td>false</td>
<td>Does not include the breakdown by clock domain summary in the report</td>
</tr>
</tbody>
</table>

**-thermal_summary** *(value)*

Specifies whether to include the thermal summary in the report. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Includes the thermal summary in the report</td>
</tr>
<tr>
<td>false</td>
<td>Does not include the thermal summary in the report</td>
</tr>
</tbody>
</table>

**-battery_life** *(value)*

Specifies whether to include the battery life summary in the report. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Includes the battery life summary in the report</td>
</tr>
<tr>
<td>false</td>
<td>Does not include the battery life summary in the report</td>
</tr>
</tbody>
</table>

**-opcond_summary** *(value)*

Specifies whether to include the operating conditions summary in the report. The following table shows the acceptable values for this argument:
### -clock_summary {value}

Specifies whether to include the clock domains summary in the report. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Includes the clock summary in the report</td>
</tr>
<tr>
<td>false</td>
<td>Does not include the clock summary in the report</td>
</tr>
</tbody>
</table>

### -style {value}

Specifies the format in which the report will be exported. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Text</td>
<td>The report will be exported as Text file</td>
</tr>
<tr>
<td>CSV</td>
<td>The report will be exported as CSV file</td>
</tr>
</tbody>
</table>

### -sortby {value}

Specifies how to sort the values in the report. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>power values</td>
<td>Sorts based on the power values</td>
</tr>
<tr>
<td>alphabetical</td>
<td>Sorts in an alphabetical order</td>
</tr>
</tbody>
</table>

### -sortorder {value}

Specifies the sort order of the values in the report. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ascending</td>
<td>Sorts the values in ascending order</td>
</tr>
<tr>
<td>descending</td>
<td>Sorts the values in descending order</td>
</tr>
</tbody>
</table>

### -instance_breakdown {value}

Specifies whether to include the breakdown by instance in the report. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Includes the operating conditions summary in the report</td>
</tr>
<tr>
<td>false</td>
<td>Does not include the operating conditions summary in the report</td>
</tr>
</tbody>
</table>
### Value

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Includes the breakdown by instance in the report</td>
</tr>
<tr>
<td>false</td>
<td>Does not include the breakdown by instance in the report</td>
</tr>
</tbody>
</table>

#### -power_threshold (value)

This specifies whether to include only the instances that consume power above a certain minimum value. When this command is set to true, the `-min_power` argument must also be used to specify that only the instances that consume power above this minimum power value are the ones that are included in the report. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Includes the power threshold in the report</td>
</tr>
<tr>
<td>false</td>
<td>Does not include the power threshold in the report</td>
</tr>
</tbody>
</table>

#### -filter_instance (value)

This specifies whether to have a limit on the number of instances to include in the Power report. When this command is set to true, the `-max_instance` argument must also be used to specify the maximum number of instances to be included into the Power report. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Indicates that you want to have a limit on the number of instances to include in the Power report</td>
</tr>
<tr>
<td>false</td>
<td>Indicates that you do not want to have a limit on the number of instances to include in the Power report</td>
</tr>
</tbody>
</table>

#### -min_power (number)

Specifies which block to expand based on the minimum power value of a block.

#### -max_instance (integer >= 0)

Sets the maximum number of instances to a specified integer greater than or equal to 0 (zero). This will limit the maximum number of instances to be included in the Power report.

#### -activity_sortorder (value)

Specifies the sort order for the activity summary. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ascending</td>
<td>Sorts the values in ascending order</td>
</tr>
<tr>
<td>descending</td>
<td>Sorts the values in descending order</td>
</tr>
</tbody>
</table>

#### -activity_sortby (value)

Specifies how to sort the values for the activity summary. The following table shows the acceptable values for this argument:
-activity_summary {value}
Specifies whether to include the activity summary in the report. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Includes the activity summary in the report</td>
</tr>
<tr>
<td>false</td>
<td>Does not include the activity summary in the report</td>
</tr>
</tbody>
</table>

-frequency_threshold {value}
Specifies whether to add a frequency threshold. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Adds a frequency threshold</td>
</tr>
<tr>
<td>false</td>
<td>Does not add a frequency threshold</td>
</tr>
</tbody>
</table>

-filter_pin {value}
Specifies whether to filter by maximum number of pins. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Filters by maximum number of pins</td>
</tr>
<tr>
<td>false</td>
<td>Does not filter by maximum number of pins</td>
</tr>
</tbody>
</table>

-min_frequency {value}
Sets the minimum frequency to {decimal value [unit { Hz | KHz | MHz}]}.

-max_pin {value}
Sets the maximum number of pins.

-enablerates_sortorder {value}
Specifies the sort order for the probabilities summary. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ascending</td>
<td>Sorts the values in ascending order</td>
</tr>
</tbody>
</table>
### Tcl Commands Reference Guide

#### Libero SoC

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>descending</td>
<td>Sorts the values in descending order</td>
</tr>
</tbody>
</table>

- **-enablerates_sortby** *(value)*
  Specifies how to sort the values for the probabilities summary. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>pin name</td>
<td>Sorts based on the pin name</td>
</tr>
<tr>
<td>net name</td>
<td>Sorts based on the net name</td>
</tr>
<tr>
<td>domain</td>
<td>Sorts based on the clock domain</td>
</tr>
<tr>
<td>frequency</td>
<td>Sorts based on the clock frequency</td>
</tr>
<tr>
<td>source</td>
<td>Sorts based on the clock frequency source</td>
</tr>
</tbody>
</table>

- **-enablerates_summary** *(value)*
  Specifies whether to include the probabilities summary in the report. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Includes the activity summary in the report</td>
</tr>
<tr>
<td>false</td>
<td>Does not include the activity summary in the report</td>
</tr>
</tbody>
</table>

- **-with_annotation_coverage** *(value)*
  Specifies whether to include the annotation coverage summary in the report. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>Includes the annotation coverage summary in the report</td>
</tr>
<tr>
<td>false</td>
<td>Does not include the annotation coverage summary in the report</td>
</tr>
</tbody>
</table>

*filename*
Specifies the name of the report.

#### Supported Families
- SmartFusion2
- IGLOO2
- RTG4

#### Notes
- The following arguments have been removed. Running the script will trigger a warning message: **Warning:** Invalid argument: -argname "argvalue" Ignored. Ignore the warning.
- annotated_pins {value}
- stat_pow {value}
- dyn_pow {value}

- Flash*Freeze, Sleep, and Shutdown are available only for certain families and devices.
- Worst and Best are available only for certain families and devices.

Examples

This example generates a Power report named report.rpt.
```
smartpower_report_power -powerunit "uW" -frequnit "MHz" -opcond "Typical" -opmode "Active" -toggle "TRUE" -rail_breakdown "TRUE" -battery_life "TRUE" -style "Text" -power_summary "TRUE" -activity_sortby "Source" text_report.txt
```

smartpower_set_mode_for_analysis
Tcl command; sets the mode for cycle-accurate power analysis.

```
smartpower_set_mode_for_analysis -mode {value}
```

Arguments

- `mode {value}`

   Specifies the mode for cycle-accurate power analysis.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Active</td>
<td>The operating mode is set to Active</td>
</tr>
<tr>
<td>Standby</td>
<td>The operating mode is set to Standby</td>
</tr>
<tr>
<td>Flash*Freeze</td>
<td>The operating mode is set to Flash*Freeze</td>
</tr>
</tbody>
</table>

Supported Families

SmartFusion2
IGLOO2
RTG4

Examples

The following example sets the mode for analysis to active:
```
smartpower_set_mode_for_analysis -mode {active}
```

See Also

Tcl documentation conventions

smartpower_set_mode_for_pdpr
This SmartPower Tcl command sets the operating mode used by the Power Driven Place and Route (PDPR) tool during power optimization.
```
smartpower_set_mode_for_pdpr -opmode {value}
```
Parameters

- opmode \{value\}
  Value must be a valid operating mode.
  This parameter is mandatory.
  Sets the operating mode for your power driven place and route.

Exceptions

None

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Return Value

This command does not return a value.

Examples

This example sets the Active mode as the operating mode for Power Driven Place and Route.
set_mode_for_pdpr -opmode "Active"

This example creates a custom mode and set it to be used by Power Driven Place and Route (PDPR).
smartpower_add_new_custom_mode -name "MyCustomMode" \
  -description "for PDPR" -base_mode "Active"
smartpower_set_mode_for_pdpr -opmode "MyCustomMode"

Tcl Command Documentation Conventions

smartpower_set_operating_condition

Tcl command; sets the operating conditions used in SmartPower to one of the pre-defined types.

\[\text{smartpower_set_operating_condition \(-opcond \{value\}\)}\]

Arguments

- opcond \{value\}
  Specifies the value of the operating condition. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>best</td>
<td>Sets the operating conditions to best</td>
</tr>
<tr>
<td>typical</td>
<td>Sets the operating conditions to typical</td>
</tr>
<tr>
<td>worst</td>
<td>Sets the operating conditions to worst</td>
</tr>
</tbody>
</table>
Supported Families
SmartFusion2
IGLOO2
RTG4

Examples
This example sets the operating conditions to best:
smartpower_set_operating_condition -opcond {best}

See Also
Tcl documentation conventions

smartpower_set_operating_conditions
Tcl command; sets the operating conditions used in SmartPower.
smartpower_set_operating_conditions "still_air | 1.0_mps | 2.5_mps | custom" -heatsink "None | custom | 10mm_Low_Profile | 15mm_Medium_Profile | 20mm_High_Profile" -boardmodel "None_Conservative | JEDEC_2s2p" [-teta_ja "decimal value"] [-teta_sa "decimal value"]

Arguments
-still_air {value}
Specifies the value for the still air operating condition. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.0_mps</td>
<td>Sets the operating conditions to best</td>
</tr>
<tr>
<td>2.5_mps</td>
<td>Sets the operating conditions to typical</td>
</tr>
<tr>
<td>custom</td>
<td>Sets the operating conditions to worst</td>
</tr>
</tbody>
</table>

-heatsink {value}
Specifies the value of the operating condition. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>none</td>
<td>No heat sink</td>
</tr>
<tr>
<td>custom</td>
<td>Sets a custom heat sink size</td>
</tr>
<tr>
<td>10mm_Low_Profile</td>
<td>10 mm heat sink</td>
</tr>
<tr>
<td>15mm_Low_Profile</td>
<td>15 mm heat sink</td>
</tr>
<tr>
<td>20mm_High_Profile</td>
<td>20 mm heat sink</td>
</tr>
</tbody>
</table>

-boardmodel {value}
Specifies your board model. The following table shows the acceptable values for this argument:
<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>None_Conservative</td>
<td>No board model, conservative routing</td>
</tr>
<tr>
<td>JEDEC_2s2p</td>
<td>JEDEC 2s2p board model</td>
</tr>
</tbody>
</table>

-`-tetaJa \{decimal_value\}`
  Optional; sets your teta ja value; must be a positive decimal

-`-tetaSa \{decimal_value\}`
  Optional; sets your teta sa value; must be a positive decimal.

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4

**Examples**
This example sets the operating conditions to best:
```
set_operating_conditions -airflow "still_air" -heatsink "None" -boardmodel "None_Conservative "
```

**See Also**
[Tcl documentation conventions](#)

**smartpower_set_process**
Tcl command; sets the process used in SmartPower to one of the pre-defined types.
```
smartpower_set_process -process \{value\}
```

**Arguments**
-`-process \{value\}`
  Specifies the value of the operating condition. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Typical</td>
<td>Sets the process for SmartPower to typical</td>
</tr>
<tr>
<td>Maximum</td>
<td>Sets the process for SmartPower to maximum</td>
</tr>
</tbody>
</table>

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4

**Examples**
This example sets the operating conditions to typical:
```
smartpower_set_process -process \{Typical\}
```
smartpower_set_scenario_for_analysis

Tcl command; sets the scenario for cycle-accurate power analysis.

```
smartpower_set_scenario_for_analysis -scenario{value}
```

Arguments

- **-scenario {value}**
  Specifies the mode for cycle-accurate power analysis.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Examples

The following example sets the scenario for analysis to my_scenario:

```
smartpower_set_scenario_for_analysis -scenario {my_scenario}
```

Tcl documentation conventions

smartpower_set_temperature_opcond

Tcl command; sets the temperature in the operating conditions to one of the pre-defined types.

```
smartpower_set_temperature_opcond -use{value}
```

Arguments

- **-use{value}**
  Specifies the temperature in the operating conditions. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>oprange</td>
<td>Sets the temperature in the operating conditions as specified in your Project Settings.</td>
</tr>
<tr>
<td>design</td>
<td>Sets the temperature in the operating conditions as specified in the SmartPower design-wide operating range. Applies to SmartPower only.</td>
</tr>
<tr>
<td>mode</td>
<td>Sets the temperature in the operating conditions as specified in the SmartPower mode-specific operating range. Applies to SmartPower only.</td>
</tr>
</tbody>
</table>

RTG4

Examples

This example sets the temperature in the operating conditions as specified in the custom mode-settings:

smartpower_set_temperature_opcond -use(mode)

See Also

Tcl documentation conventions

smartpower_set_voltage_opcond

Tcl command; sets the voltage in the operating conditions.

smartpower_set_voltage_opcond -voltage(value) -use(value)

Arguments

-voltage(value)

Specifies the voltage supply in the operating conditions. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>VDD</td>
<td>Sets the voltage operating conditions for VDD</td>
</tr>
<tr>
<td>VDDI 2.5</td>
<td>Sets the voltage operating conditions for VDDI 2.5</td>
</tr>
<tr>
<td>VPP</td>
<td>Sets the voltage operating conditions for VPP</td>
</tr>
</tbody>
</table>

-use(value)

Specifies the voltage in the operating conditions for each voltage supply. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>oprange</td>
<td>Sets the voltage in the operating conditions as specified in your Project Settings.</td>
</tr>
<tr>
<td>design</td>
<td>Sets the voltage in the operating conditions as specified in the SmartPower design-wide operating range. Applies to SmartPower only.</td>
</tr>
<tr>
<td>mode</td>
<td>Sets the voltage in the operating conditions as specified in the SmartPower mode-specific operating range. Applies to SmartPower only.</td>
</tr>
</tbody>
</table>

Supported Families

SmartFusion2
Examples

This example sets the VCCA as specified in the SmartPower mode-specific settings:

```
smartpower_set_voltage_opcond -voltage{vcca} -use{mode}
```

See Also

Tcl documentation conventions

smartpower_temperature_opcond_set_design_wide

Tcl command; sets the temperature for SmartPower design-wide operating conditions.

```
smartpower_temperature_opcond_set_design_wide -best{value} -typical{value} -worst{value} -thermal_mode{value}
```

Arguments

- `-best{value}`
  Specifies the best temperature (in degrees Celsius) used for design-wide operating conditions.
- `-typical{value}`
  Specifies the typical temperature (in degrees Celsius) used for design-wide operating conditions.
- `-worst{value}`
  Specifies the worst temperature (in degrees Celsius) used for design-wide operating conditions.
- `-thermal_mode{value}`
  Specifies the mode in which the junction temperature is computed. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ambient</td>
<td>The junction temperature will be iteratively computed with total static power</td>
</tr>
<tr>
<td>opcond</td>
<td>The junction temperature will be given as one of the operating condition range values specified in the device selection</td>
</tr>
</tbody>
</table>

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Examples

This example sets the temperature for design-wide operating conditions to Best 20, Typical 30, and Worst 60:

```
smartpower_temperature_opcond_set_design_wide -best{20} -typical{30} -worst{60}
```

See Also

Tcl documentation conventions
smartpower_temperature_opcond_set_mode_specific
Tcl command; sets the temperature for SmartPower mode-specific operating conditions.

smartpower_temperature_opcond_set_mode_specific -opmode{value} -thermal_mode{value} -best{value} -typical{value} -worst{value} -thermal_mode{value}

Arguments

- `opmode {value}`
  Specifies the operating mode. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Active</td>
<td>The operating mode is set to Active</td>
</tr>
<tr>
<td>Standby</td>
<td>The operating mode is set to Standby</td>
</tr>
<tr>
<td>Flash*Freeze</td>
<td>The operating mode is set to Flash*Freeze</td>
</tr>
</tbody>
</table>

- `thermal_mode{value}`
  Specifies the mode in which the junction temperature is computed. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ambient</td>
<td>The junction temperature will be iteratively computed with total static power</td>
</tr>
<tr>
<td>opcond</td>
<td>The junction temperature will be given as one of the operating condition range values specified in the device selection</td>
</tr>
</tbody>
</table>

- `best{value}`
  Specifies the best temperature (in degrees Celsius) for the selected mode.

- `typical{value}`
  Specifies the typical temperature (in degrees Celsius) for the selected mode.

- `worst{value}`
  Specifies the worst temperature (in degrees Celsius) for the selected mode.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Examples

This example sets the temperature for mode-specific operating conditions for mode1:

```
smartpower_temperature_opcond_set_mode_specific -mode{model} -best{20} -typical{30} -worst{60}
```

<tr>
<td>VCCI 2.5</td>
<td>Sets the voltage operating conditions for VCCI 2.5</td>
</tr>
<tr>
<td>VCCI 1.8</td>
<td>Sets the voltage operating conditions for VCCI 1.8</td>
</tr>
<tr>
<td>VCCI 1.5</td>
<td>Sets the voltage operating conditions for VCCI 1.5</td>
</tr>
<tr>
<td>VCC33A</td>
<td>Sets the voltage operating conditions for VCC33A</td>
</tr>
<tr>
<td>VCCDA</td>
<td>Sets the voltage operating conditions for VCCDA</td>
</tr>
</tbody>
</table>

- `-best{value}`
  Specifies the best voltage used for design-wide operating conditions.

- `-typical{value}`
  Specifies the typical voltage used for design-wide operating conditions.

- `-worst{value}`
  Specifies the worst voltage used for design-wide operating conditions.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Examples

This example sets VCCA for design-wide to best 20, typical 30 and worst 40:

```
smartpower_voltage_opcond_set_design_wide -voltage{VCCA} -best{20} -typical{30} -worst{40}
```

See Also

Tcl documentation conventions
smartpower_voltage_opcond_set_mode_specific

Tcl command; sets the voltage settings for SmartPower mode-specific use operating conditions.

```
smartpower_voltage_opcond_set_mode_specific -opmode{value} -voltage{value} -best{value} -typical{value} -worst{value}
```

**Arguments**

- `-opmode {value}`
  Use this option to specify the mode from which the operating conditions are extracted to generate the report.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Active</td>
<td>The operating mode is set to Active</td>
</tr>
<tr>
<td>Standby</td>
<td>The operating mode is set to Standby</td>
</tr>
<tr>
<td>Flash*Freeze</td>
<td>The operating mode is set to Flash*Freeze</td>
</tr>
</tbody>
</table>

- `-voltage{value}`
  Specifies the voltage in the operating conditions. The following table shows the acceptable values for this argument:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>VDD</td>
<td>Sets the voltage operating conditions for VDD</td>
</tr>
<tr>
<td>VDDI 2.5</td>
<td>Sets the voltage operating conditions for VDDI 2.5</td>
</tr>
<tr>
<td>VPP</td>
<td>Sets the voltage operating conditions for VPP</td>
</tr>
<tr>
<td>VCCA</td>
<td>Sets the voltage operating conditions for VCCA</td>
</tr>
<tr>
<td>VCCI 3.3</td>
<td>Sets the voltage operating conditions for VCCI 3.3</td>
</tr>
<tr>
<td>VCCI 2.5</td>
<td>Sets the voltage operating conditions for VCCI 2.5</td>
</tr>
<tr>
<td>VCCI 1.8</td>
<td>Sets the voltage operating conditions for VCCI 1.8</td>
</tr>
<tr>
<td>VCCI 1.5</td>
<td>Sets the voltage operating conditions for VCCI 1.5</td>
</tr>
<tr>
<td>VCC33A</td>
<td>Sets the voltage operating conditions for VCC33A</td>
</tr>
<tr>
<td>VCCDA</td>
<td>Sets the voltage operating conditions for VCCDA</td>
</tr>
</tbody>
</table>

- `-best{value}`
  Specifies the best voltage used for mode-specific operating conditions.

- `-typical{value}`
  Specifies the typical voltage used for mode-specific operating conditions.

- `-worst{value}`
  Specifies the worst voltage used for mode-specific operating conditions.
Supported Families
SmartFusion2
IGLOO2
RTG4

Examples
This example sets the voltage for the static mode and sets best to 20, typical to 30 and worst to 40:
smartpower_voltage_opcond_set_mode_specific -opmode{active} -voltage{VCCA} -best{20} -typical{30} -worst{40}

Tcl documentation conventions
FlashPro Express Tcl Commands

**close_project**

Closes the FlashPro Express project.

close_project

**Arguments**

None

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Exceptions**

None

**Example**

close_project

**complete_prog_job**

Tcl command; completes the current open job and generates a Job Status container including cryptographically signed Job Ticket end certifiers and Certificates of Conformance (if enabled) of the programmed devices. It archives ticket data from the HSM database. The resultant Job Status container can be imported into Job Manager and validated using U-HSM. If the job status file is not specified, the information is printed in the log window, and no Job Status container is created for subsequent verification.

The HSM Job can only be completed if the number of devices in each HSM ticket has been exhausted. If devices remain, the job can only be terminated by using the "-terminate" option.

```text
complete_prog_job [-job_status_file path] [-terminate]
```

**NOTE:** This command will fail if there are devices left in any HSM ticket and the terminate option is not used.

**Arguments**

- `[-job_status_file path]`
  Full path to the output Job Status container which contains End-Job Certifier and CofCs. If not specified, information will be printed in the log window.
- `[-terminate]`
  This option will terminate the HSM job even if there are devices left in any HSM ticket. This parameter is optional if the number of devices in all tickets have been exhausted.

**Supported Families**

- SmartFusion2, IGLOO2
configure_flashpro3_prg

Changes FlashPro3 programmer settings.

configure_flashpro3_prg [-vpump {ON|OFF}] [-clk_mode {discrete_clk|free_running_clk}] [-force_freq {ON|OFF}] [-freq {freq}]

Arguments

- vpump {ON|OFF}
  Enables FlashPro programmer to drive VPUMP. Set to ON to drive VPUMP.
- clk_mode {discrete_clk|free_running_clk}
  Specifies free running or discrete TCK.
- force_freq {ON|OFF}
  Forces the FlashPro software to use the TCK frequency specified by the software rather than the TCK frequency specified in the programmer file.
- freq {freq}
  Specifies the TCK frequency in MHz.

Supported Families

  SmartFusion2
  IGLOO2
  RTG4

Exceptions

  None

Example

The following example sets the VPUMP option to ON, TCK to free running, and uses the TCK frequency specified in the programmer file (force_freq is set to OFF):

```
configure_flashpro3_prg -vpump {ON} -clk_mode {free_running_clk} -force_freq {OFF} -freq {4}
```

The following example sets VPUMP to ON, TCK to discrete, forces the FlashPro software to use the TCK frequency specified in the software (-force_freq is set to ON) at a frequency of 2 MHz.

```
configure_flashpro3_prg -vpump {ON} -clk_mode {discrete_clk} -force_freq {ON} -freq {2}
```

configure_flashpro4_prg

Changes FlashPro4 programmer settings.

configure_flashpro4_prg [-vpump {ON|OFF}] [-clk_mode {discrete_clk|free_running_clk}] [-force_freq {ON|OFF}] [-freq {freq}]

Arguments

- vpump {ON|OFF}
Libero SoC Tcl Commands Reference Guide

Enables FlashPro4 programmer to drive VPUMP. Set to ON to drive VPUMP.
-\texttt{clk\_mode} \{\texttt{discrete\_clk}|\texttt{free\_running\_clk}\}
Specifies free running or discrete TCK.
-\texttt{force\_freq} \{\texttt{ON}|\texttt{OFF}\}
Forces the FlashPro software to use the TCK frequency specified by the software rather than the TCK frequency specified in the programmer file.
-\texttt{freq} \{\texttt{freq}\}
Specifies the TCK frequency in MHz.

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4

**Exceptions**
None

**Example**
The following example sets the VPUMP option to ON and uses a free running TCK at a frequency of 4 MHz (force_freq is set to OFF).
\begin{verbatim}
configure\_flashpro4\_prg -vpump \{ON\} -clk\_mode \{free\_running\_clk\} -force\_freq \{OFF\} -freq \{4\}
\end{verbatim}
The following example sets the VPUMP option to ON, uses a discrete TCK and sets force_freq to ON at 2 MHz.
\begin{verbatim}
configure\_flashpro4\_prg -vpump \{ON\} -clk\_mode \{discrete\_clk\} -force\_freq \{ON\} -freq \{2\}
\end{verbatim}

**configure\_flashpro5\_prg**
Tcl command; changes FlashPro5 programmer settings.
\begin{verbatim}
configure\_flashpro5\_prg \{-vpump \{ON|OFF\}\} \{-clk\_mode \{free\_running\_clk\}\} \\
\} \{-force\_freq \{ON|OFF\}\} \{-freq \{freq\}\}
\end{verbatim}

**Arguments**
-\texttt{vpump} \{\texttt{ON}|\texttt{OFF}\}
Enables FlashPro5 programmer to drive VPUMP. Set to ON to drive VPUMP. Default is ON.
-\texttt{clk\_mode} \{\texttt{free\_running\_clk}\}
Specifies free running TCK. Default is \texttt{free\_running\_clk}.
-\texttt{programming\_method} \{\texttt{jtag}|\texttt{spi\_slave}\}
Specifies the programming method to use. Default is \texttt{jtag}.
\textbf{Note:} \texttt{spi\_slave} works only with SmartFusion2 and IGLOO2.
-\texttt{force\_freq} \{\texttt{ON}|\texttt{OFF}\}
Forces the FlashPro software to use the TCK frequency specified by the software rather than the TCK frequency specified in the programmer file. Default is \texttt{OFF}.
-\texttt{freq} \{\texttt{freq}\}
Specifies the TCK frequency in MHz. Default is 4.

**Supported Families**
- SmartFusion2
- IGLOO2
RTG4

Exceptions
None

Example
The following example sets the VPUMP option to ON and uses a free running TCK at a frequency of 4 MHz (force_freq is set to OFF).

\[\text{configure\_flashpro5\_prg -vpump \{ON\} -clk\_mode \{free\_running\_clk\} -force\_freq \{OFF\} -freq \{4\}}\]

The following example sets the VPUMP option to ON, uses a free running TCK and sets force_freq to ON at 2 MHz.

\[\text{configure\_flashpro5\_prg -vpump \{ON\} -clk\_mode \{free\_running\_clk\} -force\_freq \{ON\} -freq \{2\}}\]

create_job_project
Tcl command; creates a Flashpro Express job using the programming job exported from Libero.

\[\text{create\_job\_project -job\_project\_location location -job\_file path -overwrite 0|1}\]

Arguments
- `-job_project_location location`
  Specifies the location for your FlashPro Express job project.
- `-job_file path`
  Path to the Libero job file that is used as input to create the Flashpro Express job project.
- `-overwrite 0|1`
  Set value to 1 to overwrite your existing job project.

Supported Families
SmartFusion2
IGLOO2
RTG4

Exceptions
None

Example
The following example creates a job project named test.job in the \fpexpress directory. It does not overwrite the existing job project.

\[\text{create\_job\_project \}
  -job\_project\_location \{D:\fpexpress\}
  -job\_file \{D:\test\designer\test\export\test.job\} -overwrite 0\]

dump_tcl_support
Unloads the list of supported FlashPro or FlashPro Express Tcl commands.

\[\text{dump\_tcl\_support -file \{file\}}\]
Arguments

- `file {file}`

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Exceptions

None

Example

The following example dumps your Tcl commands into the file 'tcldump.tcl'

dump_tcl_support -file {tcldump.tcl}

enable_serialization

This Tcl command enables or disables serialization programming.

eenable_serialization -name {device_name} -enable {true|false}

Arguments

- `name`
  Specifies the device name.
- `enable`
  Enables (true) or disables (false) serialization programming.

Exceptions

Must be a Microsemi Device

Supported Families

- SmartFusion2, IGLOO2

Example

enable_serialization -name M2S/M2GL050{T|S|TS} -enable true

get_job_status

Tcl command; exports status of current open job. The job status contains number of devices left for each HSM ticket. If job status file is not specified, the information is printed in the log window.

get_job_status [-job_status_file path] \ [-archive]

Arguments

[[-job_status_file path]]
Path to the output FlashPro Express job status container. The job status file can be sent to the Job Manager application and Certificates of Conformance (if available) validated using the U-HSM.
[[-archive]]
Moves the HSM ticket log files from the HSM ticket database to the HSM ticket archive. The archive folder was specified during HSM installation and setup.

**NOTE:** If no `job_status_file` is specified, the archive option prints the Certificates of Conformance in the log window without exporting them.

**Supported Families**
SmartFusion2, IGLOO2

**See Also**
SPPS User Guide
Manufacturer HSM Installation Guide
User HSM Installation Guide
Job Manager User Guide

**open_project**
Opens a FlashPro Express project.

```
open_project -project {project}
```

**Arguments**
```
-project {project}
```
Specifies the location and name of the project you wish to open.

**Supported Families**
SmartFusion2
IGLOO2
RTG4

**Exceptions**
None

**Example**
Opens the ‘FPPrj1.pro’ project from the FPProject1 directory
```
open_project -project {./FPProject1/FPPrj1.pro}
```

**ping_prg**
Pings one or more programmers.

```
ping_prg (-name {name}) *
```

**Arguments**
```
-name {name}
```
Specifies the programmer to be pinged. Repeat this argument for multiple programmers.

**Supported Families**
SmartFusion2
IGLOO2
Exceptions
None

Example
The following example pings the programmers 'FP300085' and 'FP300086'.

```
ping_prg -name {FP300085} -name {FP300086}
```

process_job_request
Tcl command; processes a job request received from Job Manager. It is part of the Job Ticket generation process.

**NOTE1:** This command does not require a FlashPro Express project to be created or opened.

**NOTE2:** HSM parameters must be configured using `set_hsm_params` before processing job request.

```
process_job_request -request_file path \
    -reply_file path \n    [-overwrite_reply {TRUE | FALSE}]
```

Arguments
- `-request_file path`
  Full file name of job request file.
- `-reply_file path`
  Full file name of job reply file.
- `-overwrite_reply {TRUE | FALSE}`
  TRUE allows overwriting of any pre-existing reply_file.

Supported Families
SmartFusion2 and IGLOO2

Example
```
process_job_request \n    -request_file {D:/flashpro_files/jobmgr_project12/cm_request.req} \n    -reply_file {D:/flashpro_files/jobmgr_project12/cm_reply.rep} \n    -overwrite_reply {TRUE}
```

See Also
SPPS User Guide
Job Manager User Guide
`set_hsm_params`

refresh_prg_list
Refreshes the programmer list. This is most often used to have FlashPro or FlashPro Express detect a programmer that you have just connected.

```
refresh_prg_list
```

Arguments
None
Supported Families
SmartFusion2
IGLOO2
RTG4

Exceptions
None

Example
refresh_prg_list

remove_hsm_tickets
Tcl command; removes HSM tickets from the HSM using one of the following methods:
- By specifying the job reply file in which case all tickets that are in the reply file will be deleted.
- By specifying each of the ticket IDs value in hexadecimal string.

```
remove_hsm_tickets [-reply_file path] \\
[-ticket_ids ticketID+] \\
[-all]
```

Arguments
- `reply_file path`  
  Full file name of job request file.
- `ticket_ids ticketID+`  
  Hex value of each ticket ID to be removed.

Supported Families
SmartFusion2, IGLOO2

Example
```
remove_hsm_tickets \\
   -reply_file {D:flashpro_filesjobmgr_project12cm_reply.rep}
remove_hsm_tickets \\
   -ticket_ids {00000000000000000000899f252d9fb55442aa7e
  00000000000000000000b6f3a9eeeca69705c
  00000000000000000000ed5702d0b767ba686b82}
```

NOTES
- This command should be used very carefully since it removes HSM tickets, rendering any FlashPro Express jobs based on those tickets to be unusable.
- This command does not require a FlashPro Express project to be created or opened.

See Also
SPPS User Guide
Job Manager User Guide

remove_prg
Removes the programmer from the programmer list.
remove_prg (-name {name})*

**Arguments**

- **name {name}**
  Specifies the programmer to be removed. You can repeat this argument for multiple programmers.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Exceptions**

None

**Example**

The following example removes the programmer '03178' from the programmer list:

```
remove_prg (name {03178})*
```

run_selected_actions

Runs the selected action on the specified programmer and returns the exit code from the action. If no programmer name is specified, the action is run on all connected programmers. Only one exit code is returned, so return code cannot be used when action is run on more than one programmer. A programming file must be loaded.

```
run_selected_actions [(-name {name})*]
```

**Arguments**

- **name {name}**
  Optional argument that specifies the programmer name. You can repeat this argument for multiple programmers.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Exceptions**

None

**Example**

The following example runs the selected actionS on the programmers 'FP30085' and 'FP30086'.

```
run_selected_actions -name {FP300085} -name {FP300086}
```

Example using return code:

```
if {{[catch {run_selected_actions} return_val]} {puts "Error running Action"} else {puts "exit code $return_val"}}
```

Example returning exit code to the command line (returns exit 99 on script failure, otherwise returns exit code from selected action):
save_log

Saves the log file.

```
save_log -file {file}
```

**Arguments**

- `-file {file}`
  - Specifies the log filename.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Exceptions**

None

**Example**

The following example saves the log file with the name 'my_logfile1.log':

```
save_log -file {my_logfile1.log}
```

save_project

Saves the FlashPro or FlashPro Express project.

```
save_project
```

**Arguments**

None

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Exceptions**

None

**Example**

```
save_project
```

scan_chain_prg

In single mode, this command runs scan chain on a programmer.

In chain mode, this command runs scan and check chain on a programmer if devices have been added in the grid.
scan_chain_prg

Arguments
- name {name}
  Specifies the programmer name.

Supported Families
  SmartFusion2
  IGLOO2
  RTG4

Exceptions
  None

Example
  The following example runs scan chain on a single programmer (single mode) named '21428':
  scan_chain_prg -name {21428}

select_serial_range

This Tcl command selects the range of indexes to program.

Arguments
- name
  Specifies the device name.
- from_data
  Specifies the start index to program.
- to_data
  Specifies the end index.

Supported Families
  SmartFusion2, IGLOO2

Exceptions
  Must be a Microsemi Device

Example
  select_serial_range -name M2S/M2GL050{T|S|TS} -from_data 3 -to_data 5

self_test_prg

Runs Self-Test on a programmer.

self_test_prg (-name {name})*
Arguments  
- name \(\{\text{name}\}\)  
Specifies the programmer name. You can repeat this argument for multiple programmers.

Supported Families  
SmartFusion2  
IGLOO2  
RTG4

Exceptions  
None

Example  
The following examples runs the self test on the programmer '30175':  
\[
\text{self\_test\_prg (\,-\text{name \{30175\}})*}
\]

set_hsm_params  
Tcl command; saves the HSM parameters for the FlashPro Express application. These parameters remain in effect until overridden by another invocation of this command.

\[
\text{set\_hsm\_params -hsm\_server\_name hsm\_server } \backslash
\text{-hsm\_type\_u \{TRUE|FALSE\} } \backslash
\text{-m\_hsm\_uuid m\_uuid } \backslash
\text{-ftp\_username ftp\_username } \backslash
\text{-ftp\_password ftp\_password}
\]

NOTE1: The HSM parameters are persistent between multiple FlashPro Express sessions on the same computer.  
NOTE2: HSM parameters only need to be set for HSM flow jobs.

Arguments  
- hsm_server \(\text{hsm\_server}\)  
Name or IP address of HSM server computer  
- hsm_type_u \(\{\text{TRUE|FALSE}\}\)  
TRUE FlashPro Express will use the Manufacturer features of the User HSM.  
FALSE FlashPro Express will use a Manufacturer HSM.  
- m_hsm_uuid \(\text{m\_uuid}\)  
UUID of HSM to be used for FlashPro Express tasks.  
- ftp_username \(\text{ftp\_username}\)  
User name to access the HSM files via FTP server.  
- ftp_password \(\text{ftp\_password}\)  
Password to access the HSM files via FTP server.

Supported Families  
SmartFusion2 and IGLOO2

Example  
\[
\text{set\_hsm\_params -hsm\_server\_name \{10.241.140.224\} } \backslash
\text{-hsm\_type\_u \{0\} } \backslash
\text{-m\_hsm\_uuid \{0000000000000000000000000000000000000002\} }
\]
set_prg_name

Changes the user name of a programmer.

```
set_prg_name -name {name} -new_name {new_name}
```

**Arguments**

- `-name {name}`
  Identifies the old programmer name.
- `-new_name {new_name}`
  Specifies the new programmer name.

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Exceptions**

None

**Example**

The following example changes the name of the programmer 'FP300086' to 'FP3Prg2':

```
set_prg_name -name {FP300086} -new_name {FP3Prg2}
```

set_programming_action

Selects the action for a device. The device name parameter must be specified only in chain programming mode. A programming file must be loaded. The device must be a Microsemi device.

```
set_programming_action [-name {name}] -action {action}
```

**Arguments**

- `-name {name}`
  Specifies the device name.
- `-action {action}`
  Specifies the action.

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Exceptions**

Must be a Microsemi device
Example

The following example sets the programming action in single programming mode:

```
set_programming_action -action {PROGRAM}
```

And in chain programming mode:

```
set_programming_action -name {MyDevice1} -action {ERASE}
```

**set_programming_file**

Sets the programming file for a device. Either the `file` or the `no_file` flag must be specified. A programming file must be loaded. The device must be a Microsemi device.

```
set_programming_file [-name {name}] [-file {file}] [-no_file { }]
```

**Arguments**

- **-name {name}**
  Specifies the device name. This argument must be specified only in chain programming mode.
- **-file {file}**
  Specifies the programming file.
- **-no_file**
  Specifies to unload the current programming file.

**Supported Families**

SmartFusion2
IGLOO2
RTG4

**Exceptions**

Must be a Microsemi device.

**Examples**

In single programming mode:

```
set_programming_file -file {e:/design/pdb/TopA3P250.pdb}
```

In chain programming mode:

```
set_programming_file -name {MyDevice2} -file {e:/design/pdb/TopA3P250.pdb}
set_programming_file -name {MyDevice1} -no_file
```

**set_serialization_log_file**

This Tcl command sets the path and name of the serialization log file.

```
set_serialization_log_file -file {log_file_path}
```

**Arguments**

- **-file**
  Specifies the serialization log file path and name

**Supported Families**

SmartFusion2, IGLOO2
Exceptions

Must be a Microsemi Device

Example

```tcl
set_serialization_log_file -file {C:/local_z_folder/work/my_serial_log}
```
SmartDebug Tcl Commands

add_probe_insertion_point

This Tcl command adds probe points to be connected to user-specified I/Os for probe insertion flow.

```
add_probe_insertion_point -net net_name -driver driver -pin package_pin_name -port port_name
```

Arguments

- `-net net_name`
  Name of the net used for probe insertion.
- `-driver driver`
  Driver of the net.
- `-pin package_pin_name`
  Package pin name (i.e. I/O to which the net will be routed during probe insertion).
- `-port port_name`
  User-specified name for the probe insertion point.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Example

```
add_probe_insertion_point -net {count_out_c[0]} -driver {Counter_8bit_0_count_out[0]:Q} -pin {H5} -port {Probe_Insert0}
```

add_to_probe_group

Tcl command; adds the specified probe points to the specified probe group.

```
add_to_probe_group -name probe_name -group group_name
```

Arguments

- `-name probe_name`
  Specifies one or more probes to add.
- `-group group_name`
  Specifies name of the probe group.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4
Example

```tcl
add_to_probe_group -name out[5]:out[5]:Q \
    -name grp1.out[3]:out[3]:Q \
    -name out.out[1].out[1]:Q \
    -group my_new.grp
```

**construct_chain_automatically**

This Tcl command automatically starts chain construction for the specified programmer.

```tcl
construct_chain_automatically -name {programmer_name}
```

**Arguments**

- **-name**
  
  Specify the device (programmer) name. This argument is mandatory.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Example**

For a single programmer:

```tcl
construct_chain_automatically -name {21428}
```

**See Also**

- `scan_chain_prg`
- `enable_device`
- `set_debug_programmer`
- `set_device_name`
- `set_programming_file`
- `set_programming_action`
- `run_selected_actions`

**create_probe_group**

Tcl command; creates a new probe group.

```tcl
create_probe_group -name group_name
```

**Arguments**

- **-name group_name**
  
  Specifies the name of the new probe group.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4
Example

```
create_probe_group -name my_new_grp
```

ddr_read

Tcl command; reads the value of specified configuration registers pertaining to the DDR memory controller (MDDR/FDDR).

```
ddr_read -block ddr_name -name reg_name
```

Arguments

- `-block <fddr || mddr || east_fddr || west_fddr>`
  - Specifies which DDR configurator is used in the Libero design.
  - SmartFusion2 and IGLOO2 - fddr and mddr
  - RTG4 - east_fddr and west_fddr
  - `-name register_name`
- `name register_name`
  - Specifies which configuration registers need to be read.
  - A complete list of registers is available in the DDR Interfaces User Guides for the respective families.

Supported Families

SmartFusion2, IGLOO2, and RTG4

Example

Read DDR Controller register DDRC_DYN_REFRESH_1_CR for a configured FDDR block on a SmartFusion2 or IGLOO2 device:

```
ddr_read -block fddr -name DDRC_DYN_REFRESH_1_CR
```

Returns

Returns 16-bit hexadecimal value.

The result of the command in the example above will be:

```
Register Name: DDRC_DYN_REFRESH_1_CR Value: 0x1234
```

```
"ddr_read" command succeeded.
```

ddr_write

Tcl command; writes the value of specified configuration registers pertaining to the DDR memory controller (MDDR/FDDR).

```
ddr_write -block ddr_name -name reg_name -value hex_value
```

Arguments

- `-block <fddr || mddr || east_fddr || west_fddr>`
  - Specifies which DDR configurator is used in the Libero design.
  - SmartFusion2 and IGLOO2 - fddr and mddr
  - RTG4 - east_fddr and west_fddr
  - `-name register_name`
- `name register_name`
  - Specifies which configuration registers need to be read.
  - A complete list of registers is available in the DDR Interfaces User Guides for the respective families.
- `value hex_value`
- Specifies the value to be written into the specified register of a given block.
- Hex_value in the form of “0x12FA”.

**Supported Families**
SmartFusion2, IGLOO2, and RTG4

**Example**
Write a 16-bit value DDR Controller register DDRC_DYN_REFRESH_1_CR for a configured FDDR block on a SmartFusion2 or IGLOO2 device:

```tcl
ddr_write -block fddr -name DDRC_DYN_REFRESH_1_CR -value 0x123f
```

**Returns**
Returns if the command succeeded or failed to execute.

```
"ddr_write" command succeeded
```

**delete_active_probe**
Tcl command; deletes either all or the selected active probes.

**Note:** You cannot delete an individual probe from the Probe Bus.

```tcl
delete_active_probe -all | -name probe_name
```

**Arguments**
```
- all
  Deletes all active probe names.
- name probe_name
  Deletes the selected probe names.
```

**Supported Families**
SmartFusion2
IGLOO2
RTG4

**Example**
```
delete -all  # deletes all active probe names
delete -name out[5]:out[5]:Q 
  -name my_grp1.out[1]:out[1]:Q  # deletes the selected probe names
delete -name my_grp1 
  -name my_bus  # deletes the group, bus and their members.
```

**enable_device**
This Tcl command enables or disables a device in the chain. When the device is disabled, it is bypassed. The device must be a Microsemi device.

```tcl
enable_device -name {device_name} -enable {1 | 0}
```

**Arguments**
```
- name
```
Specify the device name. This argument is mandatory.

```
-enable
```

Specify the enable device. This argument is mandatory.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Example**

```c
enable_device -name {MPF300 {T_ES|TS_ES}} -enable 1
```

**See Also**

- `construct_chain_automatically`
- `scan_chain_prg`
- `set_debug_programmer`
- `set_device_name`
- `set_programming_file`
- `set_programming_action`
- `run_selected_actions`

---

**event_counter**

The `event_counter` Tcl command runs on signals that are assigned to channel A on the live probe, and displays the total events. It can be run before or after setting the live probe signal to channel A. The user specifies the duration to run the `event_counter` command.

```c
event_counter -run -stop -after duration_in_seconds
```

**Arguments**

- `-run`
  Run `event_counter`.
- `-stop`
  Stop `event_counter`.
- `-after duration_in_seconds`
  Duration to stop `event_counter`. Specified by the user. This argument is required when `-stop` is specified.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Example**

```c
set_live_probe -probeA {count_out_c[0]:Counter_8bit_0_count_out[0]:Q} -probeB {}
set_live_probe -run
set_live_probe -stop -after 10
```

**Output**
export_smart_debug_data

Tcl command; exports debug data for the SmartDebug application.

```tcl
export_smart_debug_data [device_components] [bitstream_components] [-file_name {file}] [-export_dir {dir}] [-force_rtg4_otp 0 | 1]
```

The command corresponds to the Export SmartDebug Data tool in Libero. The command creates a file with the extension “ddc” that contains data based on selected options. This file is used by SmartDebug (standalone application) to create a new SmartDebug project, or it can be imported into a device in SmartDebug (standalone application).

- If you do not specify any design components, all components available in the design will be included by default except the bitstream components.
- The generate_bitstream parameter is required if you want to generate bitstream file and include it in the exported file.
  - You must specify the bitstream components you want to include in the generated bitstream file or all available components will be included.
  - If you choose to include bitstream, and the design has custom security, the custom security bitstream component must be included.

Arguments

**device_components**

The following device components can be selected. Specify “1” to include the component, and “0” if you do not want to include the component.

- probes <1|0>
- package_pins <1|0>
- memory_blocks <1|0>
- envm_data <1|0>
- security_data <1|0>
- chain <1|0>
- programmer_settings <1|0>
- io_states <1|0>

**bitstream_components**

The following bitstream components can be selected. Specify “1” to include the component, and “0” if you do not want to include the component.

- generate_bitstream <1|0>
- bitstream_security <1|0>
- bitstream_fabric <1|0>
-bitstream_envm <1|0>
-file_name file
  Name of exported file with extension "ddc".
-export_dir dir
  Location where DDC file will be exported. If omitted, design export folder will be used.
-force_rtg4_otp 0 | 1
  Enforces the use of one-time programming (OTP).

Supported Families

SmartFusion2
IGLOO2
RTG4

Example

The following examples shows the export_smart_debug_data command with all parameters.

SmartFusion2, IGLOO2, RTG4 example:

```
export_smart_debug_data \
-file_name {sd1} \ 
-export_dir {d:\sd_prj\test3T\designer\sd1\export} \ 
-force_rtg4_otp 1\ 
-probes 1 \ 
-package_pins 0 \ 
-memory_blocks 1 \ 
-envm_data 0 \ 
-security_data 1 \ 
-chain 1 \ 
-programmer_settings 1 \ 
-ios_states 1 \ 
-generate_bitstream 0 \ 
-bitstream_security 0 \ 
-bitstream_fabric 0 \ 
-bitstream_envm 0
```

PolarFire example:

```
export_smart_debug_data \
-file_name "top" \ 
-export_dir "./" \ 
-probes 1 \ 
-package_pins 0 \ 
-memory_blocks 1 \ 
-security_data 1 \ 
-chain 1 \ 
-programmer_settings 1 \ 
-ios_states 1 \ 
-generate_bitstream 1 \ 
-bitstream_security 0 \ 
-bitstream_fabric 1 \ 
-bitstream_envm 1
```

The following example shows the command with no parameters:

```
export_smart_debug_data
```

fhb_control

This Tcl command provides FPGA Hardware Breakpoint (FHB) feature capability for SmartDebug.
### fhb_control

<table>
<thead>
<tr>
<th>Argument</th>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>-halt</td>
<td>-clock_domain clkDomName(s)/all</td>
</tr>
<tr>
<td>-run</td>
<td>-clock_domain clkDomName(s)</td>
</tr>
<tr>
<td>-step</td>
<td>number_of_steps -clock_domain clkDomName(s)</td>
</tr>
<tr>
<td>-reset</td>
<td>-clock_domain clkDomName(s)</td>
</tr>
<tr>
<td>-arm_trigger</td>
<td>-trigger_signal liveProbePoint -trigger_edge_select rising -delay value -clock_domain clkDomName(s)</td>
</tr>
<tr>
<td>-disarm_trigger</td>
<td>-clock_domain clkDomName(s)/all</td>
</tr>
<tr>

<td>number_of_steps -vcd_file target_file_name</td>
</tr>
<tr>
<td>-clock_domain_status</td>
<td>-clock_domain clkDomName(s)/all</td>
</tr>
</tbody>
</table>

### Arguments

- **-halt**
  - Specifies to halt the clock.
  - **-clock_domain clkDomName(s)/all**
  - Specifies clock domain names to halt. Can be single or multiple clock domains, halted in order specified by user.

- **-run**
  - Specifies to run the clock.
  - **-clock_domain clkDomName(s)**
  - Specifies clock domain names to run. Can be single or multiple clock domains, releasing the user clock based on order specified.

- **-step number_of_steps**
  - Specifies to step the clock “number_of_steps” times. Minimum value is 1.
  - **-clock_domain clkDomName(s)**
  - Specifies clock domain names to step. Can be single or multiple clock domains.

- **-reset**
  - Specifies to reset FHB configuration for the specified clock domain.
  - **-clock_domain clkDomName(s)**
  - Specifies clock domain names to reset. Can be single or multiple clock domains.

- **-arm_trigger**
  - Specifies to arm FHB configuration for the specified clock domain.
  - **-trigger_signal liveProbePoint**
  - Set the trigger signal to arm the FHBs.
  - **-trigger_edge_select rising**
  - Specifies the trigger signal edge to arm the FHBs. FHBs will be armed on rising edge of trigger signal.
  - **-delay value**
  - **-clock_domain clkDomName(s)**
  - Specifies clock domain names to be armed by the trigger signal. Can be single or multiple clock domains.

- **-disarm_trigger**
  - Specifies to disarm FHB configuration for the specified clock domain.
  - **-clock_domain clkDomName(s)**
  - Specifies clock domain names to be reset by the trigger signal. Can be single or multiple clock domains.

- **-capture_waveform number_of_steps**
  - Specifies to capture waveform of all the added signals to active probes in the specified clock domain for number_of_steps.
  - **-vcd_file target_file_name**
  - Target file to save the data and see the waveform.

- **-clock_domain_status clkDomName(s)/all**
  - Specifies to read and display status of specified clock domain(s). Can be single or multiple clock domains.
Supported Families

SmartFusion2
IGLOO2
RTG4

Examples

fhb_control -halt -clock_domain {"FCCC_0/GL0_INST " "FCCC_0/GL1_INST" }
fhb_control -run -clock_domain {"FCCC_0/GL0_INST " "FCCC_0/GL1_INST" }
fhb_control -step -clock_domain {"FCCC_0/GL0_INST " "FCCC_0/GL1_INST" }
fhb_control -reset -clock_domain {"FCCC_0/GL0_INST " "FCCC_0/GL1_INST" }
fhb_control -arm_trigger -trigger_signal {q_0_c[14]:count_1_q[14]:Q} -trigger_edge_select {rising} - delay 0 - clock_domain {"FCCC_0/GL0_INST"}
fhb_control -disarm_trigger -trigger_signal {q_0_c[14]:count_1_q[14]:Q} -trigger_edge_select {rising} - delay 0 - clock_domain {"FCCC_0/GL0_INST"}
fhb_control -capture_waveform {10} -vcd_file {D:/wvf_location/waveform.vcd}
fhb_control - clock_domain_status - clock_domain { "FCCC_0/GL0_INST" "FCCC_0/GL1_INST" "FCCC_0/GL2_INST" }

frequency_monitor

The frequency_monitor Tcl command calculates the frequency of a signal that is assigned to live probe A.

run_frequency_monitor -signal signal_name -time duration

Arguments

- **signal signal_name**
  Specifies the signal name.
- **time duration**
  Specifies the duration to run the command. The value can be 0.1, 1, 5, 8, or 10.

Supported Families

SmartFusion2
IGLOO2
RTG4

Example

run_frequency_monitor -signal {count_out_c[7]:Counter_8bit_0_count_out[7]:Q} -time {5}

Output

Device ID Code = 2F8071CF
The 'read_id_code' command succeeded.
Frequency = 0.192716 MHz
The 'run_frequency_monitor' command succeeded.
The Execute Script command succeeded.

get_programmer_info

This Tcl command lists the IDs of all FlashPRO programmers connected to the machine.

get_programmer_info

This command takes no arguments.
Supported Families
SmartFusion2
IGLOO2
RTG4

Example
```tcl
set a [get_programmer_info]
```

load_active_probe_list
Tcl command; loads the list of probes from the file.
```tcl
load_active_probe_list -file file_path
```

Arguments
```
-file file_path
```
The input file location.

Supported Families
SmartFusion2
IGLOO2
RTG4

Example
```tcl
load_active_probe_list -file "./my_probes.txt"
```

loopback_test
Tcl command; used to start and stop the loopback tests.
```tcl
loopback_test [-deviceName device_name] -start -serdes num -lane num -type LoopbackType
loopback_test [-deviceName device_name] -stop -serdes num -lane num
```

Arguments
```
-deviceName device_name
```
Parameter is optional if only one device is available in the current configuration or set for debug (see the SmartDebug User’s Guide for details).
```
-start
```
Starts the loopback test.
```
-stop
```
Stops the loopback test.
```
-serdes num
```
Serdes block number. Must be between 0 and 4 and varies between dies.
```
-lane num
```
Serdes lane number. Must be between 0 and 4
```
-type LoopbackType
```
Specifies the loopback test type. Must be meso (PCS Far End PMA RX to TX Loopback)
Supported Families
SmartFusion2, IGLOO2, RTG4

Example
loopback_test -start -serdes 1 -lane 1 -type meso
loopback_test -start -serdes 0 -lane 0 -type plesio
loopback_test -start -serdes 1 -lane 2 -type parallel
loopback_test -stop -serdes 1 -lane 2

move_to_probe_group
Tcl command; moves the specified probe points to the specified probe group.

Note: Probe points related to a bus cannot be moved to another group.

Arguments
-name probe_name
Specifies one or more probes to move.
-group group_name
Specifies name of the probe group.

Supported Families
SmartFusion2
IGLOO2
RTG4

Example
move_to_probe_group -name out[5]:out[5]:Q \
           -name grp1.out[3]:out[3]:Q \
           -group my_grp2

prbs_test
Tcl command; used in PRBS test to start, stop, reset the error counter and read the error counter value.

Arguments
-deviceName device_name
Parameter is optional if only one device is available in the current configuration or set for debug (see the SmartDebug User’s Guide for details).
-start
Starts the prbs test.
-stop
Stops the prbs test.
-reset_counter
Resets the prbs error count value to 0.
-read_counter
Reads and prints the error count value.
-serdes num
Serdes block number. Must be between 0 and 4 and varies between dies.
-lane num
Serdes lane number. Must be between 0 and 4.
-near
Corresponds to near-end (on-die) option for prbs test. Not specifying implies off-die.
-pattern PatternType
The pattern sequence to use for PRBS test. It can be one of the following: prbs7, prbs11, prbs23, or prbs31

Supported Families
SmartFusion2, IGLOO2, RTG4

Example
prbs_test -start -serdes 1 -lane 0 -near -pattern prbs11
prbs_test -start -serdes 2 -lane 2 -pattern custom -value all_zeros
prbs_test -start -serdes 0 -lane 1 -near -pattern user -value 0x0123456789ABCDEF0123

program_probe_insertion
This Tcl command runs the probe insertion flow on the selected nets.

Supported Families
SmartFusion2, IGLOO2, RTG4

ungroup
Tcl command; disassociates the probes as a group.

Arguments
-name group_name
Name of the group.

Supported Families
SmartFusion2, IGLOO2, RTG4
Example

ungroup -name my_grp4

read_active_probe

Tcl command; reads active probe values from the device. The target probe points are selected by the `select_active_probe` command.

```
read_active_probe [-deviceName device_name] [-name probe_name] [-group_name bus_name|group_name] [-value_type b|h][-file file_path]
```

Arguments

- **-deviceName device_name**
  Parameter is optional if only one device is available in the current configuration.

- **-name probe_name**
  Instead of all probes, read only the probes specified. The probe name should be prefixed with bus or group name if the probe is in the bus or group.

- **-group_name bus_name | group_name**
  Instead of all probes, reads only the specified buses or groups specified here.

- **-value_type b | h**
  Optional parameter, used when the read value is stored into a variable as a string.
  
  b = binary
  h = hex

- **-file file_path**
  Optional. If specified, redirects output with probe point values read from the device to the specified file.

**Note:** When the user tries to read at least one signal from the bus/group, the complete bus or group is read. The user is presented with the latest value for all the signals in the bus/group.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Example

read_active_probe -group_name {bus1}
read_active_probe -group_name {group1}

To save into variable:

```
set a [read_active_probe -group_name {bus_name} -value_type h]  #save read data in hex string
```

If read values are stored into a variable without specifying value_type parameter, it saves values as a binary string by default.

**Example**

```
set a [read_active_probe ]  #sets variable a as binary string of read values after read_active_probe command.
```

read_lsram

Tcl command; reads a specified block of large SRAM from the device.
Physical block

```
read_lsram [-deviceName device_name] -name block_name [-fileName file_name]
```

Arguments

- **deviceName device_name**
  Parameter is optional if only one device is available in the current configuration or set for debug (see SmartDebug help for details).

- **name block_name**
  Specifies the name for the target block.

- **fileName file_name**
  Optional; specifies the output file name for the data read from the device.

Exceptions

- Array must be programmed and active
- Security locks may disable this function

Supported Families

SmartFusion2, IGLOO2, RTG4

Example

Reads the SRAM Block sram_block1 from the sf2 device and writes it to the file sram_block_output.
```
read_lsram [-deviceName sf2] -name sram_block1 [-fileName sram_block_output]
```

Logical block

```
read_lsram -logicalBlockName block_name -port port_name [-fileName filename]
```

Arguments

- **logicalBlockName block_name**
  Specifies the name for the user defined memory block.

- **port port_name**
  Specifies the port for the memory block selected. Can be either Port A or Port B.

- **fileName filename**
  Optional; specifies the output file name for the data read from the device.

Example

```
read_lsram -logicalBlockName {Fabric.Logic_0/U2/F_0_F0_U1} -port {Port A}
```

**read_usram**

Tcl command; reads a uSRAM block from the device.

Physical block

```
read_usram [-deviceName device_name] -name block_name [-fileName file_name]
```
Arguments

- **deviceName** *device_name*
  Parameter is optional if only one device is available in the current configuration or set for debug (see SmartDebug help for details).

- **name** *block_name*
  Specifies the name for the target block.

- **fileName** *file_name*
  Optional; specifies the output file name for the data read from the device.

Exceptions

- Array must be programmed and active
- Security locks may disable this function

Supported Families

SmartFusion2, IGLOO2, RTG4

Example

Reads the uSRAM Block usram_block2 from the sf2 device and writes it to the file sram_block_output.

```
read_usram [-deviceName sf2] -name usram_block2 [-fileName sram_block_output]
```

Logical block

```
read_usram -logicalBlockName block_name -port port_name [-file filename]
```

Arguments

- **logicalBlockName** *block_name*
  Specifies the name for the user defined memory block.

- **port** *port_name*
  Specifies the port for the memory block selected. Can be either Port A or Port B.

- **file** *filename*
  Optional; specifies the output file name for the data read from the device.

Example

```
read_usram -logicalBlockName {Fabric_Logic_0/U3/F_0_F0_U1} -port {Port A}
```

remove_from_probe_group

Tcl command; removes the specified probe points from the group. That is, the removed probe points won’t be associated with any probe group.

**Note:** Probes cannot be removed from the bus.

```
remove_from_probe_group -name probe_name
```

Arguments

- **name** *probe_name*
  Specifies one or more probe points to remove from the probe group.

Supported Families

SmartFusion2
IGLOO2
RTG4

Example
The following command removes two probes from my_grp2.
```
Move_out_of_probe_group -name my_grp2.out[3]:out[3]:Q \
- name my_grp2.out[3]:out[3]:Q
```

**remove_probe_insertion_point**
This Tcl command deletes an added probe from the probe insertion UI.
```
remove_probe_insertion_point -net net_name -driver driver
```

**Arguments**
- `-net net_name`
  Name of the existing net which is added using the `add_probe_insertion_point` command.
- `-driver driver`
  Driver of the net.

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4

Example
```
remove_probe_insertion_point -net {count_out_c[0]} -driver
{Counter_8bit_0_count_out[0]:Q}
```

**run_selected_actions**
This Tcl command is used to run the selected action for a device.
```
run_selected_actions
```
This command takes no arguments.

**Supported Families**
- SmartFusion2
- IGLOO2
- RTG4

Example
```
set_programming_action -name {MPF300(T_ES|TS_ES)} -action {DEVICE_INFO}
set_programming_action -name {M2S/M2GL090(T|TS|TV)} -action {ERASE}
```

**See Also**
- `construct_chain_automatically`
- `scan_chain_prpg`
- `enable_device`
save_active_probe_list

Tcl command; saves the list of active probes to a file.

```
save_active_probe_list -file file_path
```

Arguments

- `file file_path`
  The output file location.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Example

```
save_active_probe_list -file "./my_probes.txt"
```

scan_chain_prg

In single mode, this Tcl command runs scan chain on a programmer. In chain mode, this Tcl command runs scan and check chain on a programmer if devices have been added in the grid.

```
scan_chain_prg -name {programmer_name}
```

Arguments

- `name`
  Specify the device (programmer) name. This argument is mandatory.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Example

```
scan_chain_prg -name {21428}
```

See Also

- construct_chain_automatically
- enable_device
- set_debug_programmer
- set_device_name.htm
- set_programming_file
select_active_probe

Tcl command; manages the current selection of active probe points to be used by active probe READ operations. This command extends or replaces your current selection with the probe points found using the search pattern.

```
select_active_probe [-deviceName device_name] [-name probe_name_pattern] [-reset true|false]
```

**Arguments**

- **-deviceName device_name**
  Parameter is optional if only one device is available in the current configuration.

- **-name probe_name_pattern**
  Specifies the name of the probe. Optionally, search pattern string can specify one or multiple probe points. The pattern search characters "*" and "?" also can be specified to filter out the probe names.

- **-reset true | false**
  Optional parameter; resets all previously selected probe points. If name is not specified, empties out current selection.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Example**

The following command selects three probes. In the below example, "grp1" is a group and "out" is a bus.

```
Select_active_probe -name out[5]:out[5]:Q
Select_active_probe -name out.out[1]:out[1]:Q \n    -name out.out[3]:out[3]:Q \n    -name out.out[5]:out[5]:Q
```

set_debug_programmer

This Tcl command is used to set the debug programmer.

```
set_debug_programmer -name {programmer_name}
```

**Arguments**

- **-name**
  Specify the programmer. This argument is mandatory.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Example**

```
set_debug_programmer -name {S201YQST1V}
```
**See Also**

- construct_chain_automatically
- scan_chain_prg
- enable_device
- set_device_name
- set_programming_file
- set_programming_action
- run_selected_actions

**set_device_name**

Tcl command that is used to set the device name.

```tcl
set_device_name -name {device_name} -new_name {new_name}
```

**Arguments**

- `-name`
  Specify the device name. This argument is mandatory.
- `-new_name`
  Specify the new name for the device. This argument is mandatory.

**Supported Families**

SmartFusion2, IGLOO2, RTG4, PolarFire

**Example**

```tcl
set_device_name -name {MPF300(T_ES|TS_ES)} -new_name {Polarfire}
```

**See Also**

- construct_chain_automatically
- scan_chain_prg
- enable_device
- set debug programmer
- set_programming_file
- set_programming_action
- run_selected_actions

**set_programming_action**

This Tcl command is used to select the action for a device.

```tcl
set_programming_action [-name {device_name}] -action {procedure_action}
```

**Arguments**

- `-name`
  Specify the device name. This argument is mandatory.
- `-action`
  Specify the programming action. This argument is mandatory.
## Supported Families

- SmartFusion2
- IGLOO2
- RTG4

## Example

```tcl
set_programming_action -name {MPF300(T_ES|TS_ES)} -action {DEVICE_INFO}
set_programming_action -name {M2S/M2GL090(T|TS|TV)} -action {ERASE}
```

## See Also

- `scan_chain_prg`
- `enable_device`
- `set_debug_programmer`
- `set_device_name`
- `set_programming_file`
- `run_selected_actions`

### `set_programming_file`

This Tcl command is used to set the programming file for a device. Either the file or the no_file flag must be specified. A programming file must be loaded. The device must be a Microsemi device.

#### Arguments

- `-name {device_name}`
- `-file {stapl_file_name_with_path}`

#### Supported Families

- SmartFusion2
- IGLOO2
- RTG4

#### Example

```tcl
set_programming_file -name {MPF300(T_ES|TS_ES)} -file {D:/export/CM1_PCIE_TOP_default_uic_12_200_0_12.stp}
```

#### See Also

- `construct_chain_automatically`
- `scan_chain_prg`
- `enable_device`
- `set_debug_programmer`
- `set_device_name`
- `set_programming_action`
- `run_selected_actions`
serdes_lane_reset

Tcl command. In EPCS mode, this command resets the lane. In PCI mode, this command resets the lane, all other lanes in the link, and the corresponding PCIe controller. The result is shown in the log window/console.

serdes_lane_reset -serdes num -lane num

Arguments

- serdes num
  The SERDES block number. It must be between 0 and varies between dies. It must be one of the SERDES blocks used in the design.
  lane num
  The SERDES lane number. It must be between 0 and 3. It must be one of the lanes enabled for the block in the design.

Supported Families

SmartFusion2, IGLOO2, RTG4

Example

serdes_lane_reset -serdes 0 -lane 0
  In EPCS mode, resets Lane 0, for block 0. In PCI mode, resets Lane 0 for block 0, all other lanes in the same link for block 0
serdes_lane_reset -serdes 5 -lane 3

Errors

The following errors result in the failure of the Tcl command and the corresponding message on the smart debug log window:

When the “-serdes” parameter is not specified:
  Error: Required parameter 'serdes' is missing.
  Error: Failure when executing Tcl script. [Line 26: Error in command serdes_lane_reset]
  Error: The Execute Script command failed.

When the “-lane” parameter is not specified:
  Error: Required parameter 'lane' is missing.
  Error: Failure when executing Tcl script. [Line 26: Error in command serdes_lane_reset]
  Error: The Execute Script command failed.

When “block number” is not specified:
  Error: Parameter 'serdes' has illegal value.
  Error: Failure when executing Tcl script. [Line 26: Error in command serdes_lane_reset]
  Error: The Execute Script command failed.

When “lane number” is not specified:
  Error: Required parameter 'lane' is missing.
  Error: Failure when executing Tcl script. [Line 26: Error in command serdes_lane_reset]
  Error: The Execute Script command failed.

When “block number” is invalid:
  Error: Phy Reset: Serdes block number should be one of the following: 0
  Error: The command 'serdes_lane_reset' failed.
  Error: Failure when executing Tcl script. [Line 26]
  Error: The Execute Script command failed.

Note: Only the SERDES blocks used the design will be mentioned in the above list.

When “lane number” is invalid:
Error: Phy Reset: Serdes lane number should be between 0 and 3.
Error: The command 'serdes_lane_reset' failed.
Error: Failure when executing Tcl script. [Line 26]
Error: The Execute Script command failed.

For all the above scenarios, the following message appears:

![Error message]

serdes_read_register

Tcl command; reads the SERDES register value and displays the result in the log window/console.

```
serdes_read_register -serdes num [ -lane num ] -name REGISTER_NAME
```

Arguments

- **-serdes num**
  SERDES block number. Must be between 0 and and varies between dies.

- **-lane num**
  SERDES lane number. Must be between 0 and 3.
  The lane number must be specified when the lane register is used. Otherwise, the command will fail.
  When the lane number is specified along with the SYSTEM or PCIe register, the command will fail with an error message, as the lane is not applicable to them.

- **-name REGISTER_NAME**
  Name of the SERDES register.

Supported Families

SmartFusion2, IGLOO2, RTG4

Example

```
serdes_read_register -serdes 0 -name SYSTEM_SER_PLL_CONFIG_HIGH
serdes_read_register -serdes 0 -lane 0 -name CR0
```

serdes_write_register

UG0567: RTG4 High-Speed Serial Interfaces User Guide (includes all SERDES register names)

UG0447: SmartFusion2 and IGLOO2 FPGA High-Speed Serial Interfaces User Guide

serdes_write_register

Tcl command; writes the value to the SERDES register. Displays the result in the log window/console.

```
serdes_write_register -serdes num [-lane num ] -name REGISTER_NAME -value 0x1234
```
Arguments

- `serdes num`
  SERDES block number. Must be between 0 and 5 and varies between dies.
- `lane num`
  SERDES lane number. Must be between 0 and 3.
  The lane number should be specified when the lane register is used. Otherwise, the command will fail.
  When the lane number is specified along with the SYSTEM or PCIe register, the command will fail with an
  error message, as the lane is not applicable to them.
- `name REGISTER_NAME`
  Name of the SERDES register.
- `value`
  Specify the value in hexadecimal format.

Supported Families

SmartFusion2, IGLOO2, RTG4

Example

```
serdes_write_register -serdes 0 -name SYSTEM_SER_PLL_CONFIG_HIGH -value 0x5533
```

See Also

- [serdes_read_register.htm](#)
- [UG0567: RTG4 High-Speed Serial Interfaces User Guide](#) (includes all SERDES register names)
- [UG0447: SmartFusion2 and IGLOO2 FPGA High-Speed Serial Interfaces User Guide](#)

set_live_probe

Tcl command; set_live_probe channels A and/or B to the specified probe point(s). At least one probe point must
be specified. Only exact probe name is allowed (i.e. no search pattern that may return multiple points).

```
set_live_probe [-deviceName device_name] [-probeA probe_name] [-probeB probe_name]
```

Arguments

- `deviceName device_name`
  Parameter is optional if only one device is available in the current configuration or set for debug (see
  SmartDebug user guide for details).
- `probeA probe_name`
  Specifies target probe point for the probe channel A.
- `probeB probe_name`
  Specifies target probe point for the probe channel B.

Supported Families

SmartFusion2
IGLOO2
RTG4

Exceptions

- The array must be programmed and active
- Active probe read or write operation will affect current settings of Live probe since they use same probe circuitry inside the device
- Setting only one Live probe channel affects the other one, so if both channels need to be set, they must be set from the same call to `set_live_probe`
- Security locks may disable this function
- In order to be available for Live probe, ProbeA and ProbeB I/O’s must be reserved for Live probe respectively

**Example**

Sets the Live probe channel A to the probe point A12 on device sf2.

```bash
set_live_probe [-deviceName sf2] [-probeA A12]
```

**ungroup**

Tcl command; disassociates the probes as a group.

```bash
ngroup -name group_name
```

**Arguments**

- `name group_name`
  Name of the group.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Example**

```bash
ungroup -name my_grp4
```

**unset_live_probe**

Tcl command; discontinues the debug function and clears both live probe channels (Channel A and Channel B). An all zeros value is shown for both channels in the oscilloscope.

**Note:** For RTG4, only one probe channel (Probe Read Data Pin) is available.

```bash
unset_live_probe [-deviceName device_name]
```

**Arguments**

- `deviceName device_name`
  Parameter is optional if only one device is available in the current configuration or set for debug (see the SmartDebug User’s Guide for details).

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4
Exceptions

- The array must be programmed and active.
- Active probe read or write operation affects current of Live Probe settings, because they use the same probe circuitry inside the device.
- Security locks may disable this function.

Example

The following example unsets both live probe channels (Channel A and Channel B) from the device sf2.

```
unset_live_probes [-deviceName sf2]
```

write_active_probe

Tcl command; sets the target probe point on the device to the specified value. The target probe point name must be specified.

```
write_active_probe [-deviceName device_name] [-name probe_name] [-value true|false]
                    [-group_name group_bus_name] [-group_value "hex-value" | "binary-value"]
```

Arguments

- `-deviceName device_name`
  Parameter is optional if only one device is available in the current configuration.
- `-name probe_name`
  Specifies the name for the target probe point. Cannot be a search pattern.
- `-value true | false hex-value | binary-value`
  Specifies values to be written.
  True = High
  False = Low
- `-group_name group_bus_name`
  Specify the group or bus name to write to complete group or bus.
- `-group_value "hex-value" | "binary-value"`
  Specify the value for the complete group or bus.
    Hex-value format: "<size>h<value>"
    Binary-value format: "<size>b<value>"

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Example

```
write_active_probe -name out[5]:out[5]:Q -value true  # write to a single probe
write_active_probe -name grp1.out[3]:out[3]:Q -value low  # write to a probe in the group
write_active_probe -group_name grp1 -group_value “8’hF0”  # write the value to complete group
write_active_probe -group_name out -group_value “8’b11110000” \ 
   -name out[2]:out[2]:Q -value true  # write multiple probes at the same time.
```
write_lsram (SmartFusion2, IGLOO2, RTG4)

Tcl command; writes a seven bit word into the specified large SRAM location.

### Physical block

write_lsram [-deviceName device_name] -name block_name -offset offset_value -value value

**Arguments**

- `deviceName device_name`
  Parameter is optional if only one device is available in the current configuration or set for debug (see SmartDebug help for details).

- `name block_name`
  Specifies the name for the target block.

- `offset offset_value`
  Offset (address) of the target word within the memory block.

- `value value`
  Nine-bit value to be written to the target location.

**Exceptions**

- Array must be programmed and active
- The maximum value that can be written is 0x1FF
- Security locks may disable this function

**Example**

Writes a value of 0x1A to the device sf2 in the block sram_block1 with an offset of 16.

```
write_lsram [-deviceName sf2] -name sram_block1 -offset 16 -value 0x1A
```

### Logical block

write_lsram -logicalBlockName block_name -port port_name -offset offset_value -logicalValue hexadecimal_value

**Arguments**

- `logicalBlockName block_name`
  Specifies the name for the user defined memory block.

- `port port_name`
  Specifies the port for the memory block selected. Can be either Port A or Port B.

- `offset offset_value`
  Offset (address) of the target word within the memory block.

- `logicalValue hexadecimal_value`
  Specifies the hexadecimal value to be written to the memory block. Size of the value is equal to the width of the output port selected.

**Example**

```c
write_lsram -logicalBlockName {Fabric_Logic_0/U2/F_0_F0_U1} -port {Port A} -offset 1 -logicalValue {00FFF}
```
write_usram (SmartFusion2, IGLOO2, RTG4)

Tcl command; writes a seven bit word into the specified uSRAM location.

Physical block

write_usram [-deviceName device_name] -name block_name] -offset offset_value -value value

Arguments

- deviceName device_name
  Parameter is optional if only one device is available in the current configuration or set for debug (see SmartDebug help for details).
- name block_name
  Specifies the name for the target block.
- offset offset_value
  Offset (address) of the target word within the memory block.
- value value
  Nine-bit value to be written.

Exceptions

- Array must be programmed and active
- The maximum value that can be written is 0x1FF
- Security locks may disable this function

Example

Writes a value of 0x1A to the device sf2 in the block usram_block2 with an offset of 16.

write_usram [-deviceName sf2] -name usram_block2 -offset 16 -value 0x1A

Logical block

write_usram -logicalBlockName block_name -port port_name -offset offset_value -logicalValue hexadecimal_value

Arguments

- logicalBlockName block_name
  Specifies the name for the user defined memory block.
- port port_name
  Specifies the port for the memory block selected. Can be either Port A or Port B.
- offset offset_value
  Offset (address) of the target word within the memory block.
- logicalValue hexadecimal_value
  Specifies the hexadecimal value to be written to the memory block. Size of the value is equal to the width of the output port selected.

Example

write_usram -logicalBlockName {Fabric_Logic_0/U3/F_0_F0_U1} -port {Port A} -offset 1 -logicalValue {00FFF}

**JTAG Configuration Tcl Commands**

These commands take a script that contains JTAG chain configuration-specific Tcl commands and passes them to FlashPro Express for execution.

Note that these commands cannot be executed directly from Libero.

### add_actel_device

Adds an Actel device to the chain. Either the `file` or `device` parameter must be specified. Chain programming mode must have been set.

```
add_actel_device [-file {filename}] [-device {device}] -name {name}
```

**Arguments**

Where:

- `-file {filename}`
  Specifies a programming filename.
- `-device {device}`
  Specifies the device family (such as MPF300).
- `-name {name}`
  Specifies the device user name.

**Supported Families**

All

**Exceptions**

None

**Example**

```
add_actel_device -file {e:/design/stp/TOP.stp} -name {MyDevice1}
add_actel_device -device {MPF300} -name {MyDevice2}
```

### add_non_actel_device

Adds a non-Actel device in the chain. Either the file, or `-tck` and `-ir` parameters must be specified. The Chain programming mode must have been set.

```
add_non_actel_device [-file {file}] [-ir {ir}] [-tck {tck}] [-name {name}]
```

**Arguments**

- `-file {filename}`
  Specifies a BSDL file.
- `-ir {ir}`
Specifies the IR length.

- **tck** `{tck}`
  Specifies the maximum TCK frequency (in MHz).
- **name** `{name}`
  Specifies the device user name.

### Supported Families

All

### Exceptions

None

### Examples

```
add_non_actel_device -file {e:/design/bsdl/DeviceX.bsdl} -name {MyDevice3}
add_non_actel_device -ir 8 - tck 5 -name {MyDevice4}
```

### add_non_actel_device_to_database

Imports settings via a BSDL file that adds non-Actel or non-Microsemi devices to the device database so that they are recognized during scan chain and auto-construction operations.

```
add_non_actel_device_to_database [-file {bsdl_filename}]
```

### Arguments

- **-file** `{bsdl_filename}`
  Specifies the path to the BSDL file and the BSDL filename add to the database.

### Supported Families

All non-Microsemi and non-Actel families

### Exceptions

N/A

### Examples

The following example uses a BSDL file to add a non-Microsemi (1502AS J44) device to the device database:

```
add_non_actel_device_to_database -file {c:/bsdl/atmel/1502AS_J44.bsd}
```

The following example uses a BSDL file to add a non-Microsemi (80200) device to the device database:

```
add_non_actel_device_to_database -file {c:/bsdl/intel/80200_v1.0.bsd}
```

### construct_chain_automatically

Automatically starts chain construction for the specified programmer.

```
construct_chain_automatically[(-name {name})+]
```
Arguments

- `name {name}`

  Specifies the programmer(s) name(s).

Supported Families

All

Exceptions

N/A

Example

Example for one programmer:

```
construct_chain_automatically -name {21428}
```

Example for two programmers:

```
construct_chain_automatically -name {21428} -name {00579}
```

copy_device

Copies a device in the chain to the clipboard. Chain programming mode must be set. See the `paste_device` command for more information.

```
copy_device (-name {name})*
```

Arguments

- `name {name}`

  Specifies the device name. Repeat this argument to copy multiple devices.

Supported Families

All

Exceptions

None

Example

The example copies the device ‘mydevice1’ to the same location with a new name ‘mydevice2’.

```
copy_device -name {MyDevice1} -name {MyDevice2}
```

cut_device

Removes one or more devices from the chain. It places the removed device in the clipboard. Chain programming mode must be set to use this command. See the `paste_device` command for more information.

```
cut_device (-name {name})*
```

Arguments

- `name {name}`

  Specifies the device name. You can repeat this argument for multiple devices.
Supported Families

All

Exceptions

None

Example

The following example removes the devices 'mydevice1' and 'mydevice2' from the chain.

cut_device -name {MyDevice1} -name {MyDevice2}

enable_device

Enables or disables a device in the chain (if the device is disabled, it is bypassed). Chain programming mode must be set. The device must be a Microsemi device.

enable_device -name {name} -enable {TRUE|FALSE}

Arguments

- name {name}
  Specifies your device name
- enable {TRUE|FALSE}
  Specifies whether the device is to be enabled or disabled. If you specify multiple devices, this argument applies to all specified devices. (TRUE = enable. FALSE = disable)

Supported Families

All

Exceptions

None

Example

The following example disables the device 'mydevice1' in the chain.

enable_device -name {MyDevice1} -enable {FALSE}

paste_device

Pastes the devices that are on the clipboard in the chain, immediately above the position_name device, if this parameter is specified. Otherwise it places the devices at the end of the chain. The chain programming mode must be enabled.

paste_device [-position_name {position_name}]

Arguments

- position_name {position_name}
  Optional argument that specifies the name of a device in the chain.

Supported Families

All
Exceptions

None

Examples

The following example pastes the devices on the clipboard immediately above the device 'mydevice3' in the chain.

```
paste_device -position_name {MyDevice3}
```

**remove_device**

Removes the device from the chain. Chain programming mode must be set.

```
remove_device (-name {name})*
```

Arguments

- `-name {name}`
  Specifies the device name. You can repeat this argument for multiple devices.

Supported Families

All

Exceptions

None

Example

Remove a device 'M2S050T' from the chain:

```
remove_device (-name {M2S050T})*
```

**remove_non_actel_device_from_database**

Removes settings for non-Microsemi or non-Actel device from the device database.

```
remove_non_actel_device_from_database [-name {device_name}]
```

Arguments

- `-name {device_name}`
  Specifies the non-Actel or non-Microsemi device name to be removed from the database. You can repeat this argument for multiple devices.

Supported Families

Non-Microsemi and non-Actel devices

Exceptions

None

Example

The following example removes the F1502AS_J44 device from the database:
select_libero_design_device

This command selects the Libero design device for the Programming Connectivity and Interface tool within Libero. This command is needed when the tool cannot automatically resolve the Libero design device when there are two or more identical devices that match the Libero design device in the configured JTAG chain.

Arguments

- name {device_name}

Specifies a user-assigned unique device name in the JTAG chain.

Supported Families

SmartFusion2
IGLOO2
RTG4

Exceptions

None

Example

select_libero_design_device -name {M2S050TS (2)}
selct_libero_design_device -name {my_design_device}

Note

This Tcl command is typically used in a Tcl command script file that is passed to the Libero run_tool command.

run_tool -name {CONFIGURE_CHAIN} -script {<flashPro_cmd>.tcl}

set_bsdsl_file

Sets a BSDL file to a non-Microsemi device in the chain. Chain programming mode must have been set. The device must be a non-Microsemi device.

Arguments

name {name}

Specifies the device name.

-file {file}

Specifies the BSDL file.

Supported Families

Any non-Microsemi device supported by FlashPro Express.
Exceptions
None

Example
The following example sets the BSDL file /design/bsdl/NewBSDL2.bsdl to the device 'MyDevice3':

```
set_bsd1_file -name {MyDevice3} -file {e:/design/bsdl/NewBSDL2.bsdl}
```

**set_device_ir**
Sets the IR length of a non-Microsemi device in the chain. Chain programming mode must be set. The device must be a non-Microsemi device.

```
set_device_ir -name {name} -ir {ir}
```

**Arguments**
- `-name {name}`
  Specifies the device name.
- `-ir {ir}`
  Specifies the IR length.

**Supported Families**
Any non-Microsemi device supported by FlashPro Express.

**Exceptions**
None

**Example**
The following example sets the IR length to '2' for the non-Microsemi device 'MyDevice4':

```
set_device_ir -name {MyDevice4} -ir {2}
```

**set_device_name**
Changes the user name of a device in the chain. Chain programming mode must be set.

```
set_device_name -name {name} -new_name {new_name}
```

**Arguments**
- `-name {name}`
  Identifies the old device name.
- `-new_name {new_name}`
  Specifies the new device name.

**Supported Families**
All

**Exceptions**
None
**Example**

The following example changes the user name of the device from 'MyDevice4' to 'MyDevice5':

```
set_device_name -name {MyDevice4} -new_name {MyDevice5}
```

**set_device_order**

Sets the order of the devices in the chain to the order specified. Chain programming mode must have been set. Unspecified devices will be at the end of the chain.

```
set_device_order (-name {name})*
```

**Arguments**

- `-name {name}`
  Specifies the device name. To specify a new order you must repeat this argument and specify each device name in the order desired.

**Supported Families**

All

**Exceptions**

None

**Example**

The following example sets the device order for 'MyDevice1', 'MyDevice2', 'MyDevice3', and 'MyDevice4'. 'MyDevice2' is unspecified so it moves to the end of the chain.

```
set_device_order -name {MyDevice3} -name {MyDevice1} -name {MyDevice4}
```

The new order is:

```
MyDevice3 MyDevice1 MyDevice4 MyDevice2
```

**set_device_tck**

Sets the maximum TCK frequency of a non-Microsemi device in the chain. Chain programming mode must be set. The device must be a non-Microsemi device.

```
set_device_tck -name {name} -tck {tck}
```

**Arguments**

- `-name {name}`
  Specifies the device name.
- `-tck {tck}`
  Specifies the maximum TCK frequency (in MHz).

**Supported Families**

Any non-Microsemi device supported by FlashPro Express.

**Exceptions**

None
Example

The following example sets the maximum TCK frequency of the non-Microsemi device 'MyDevice4':

```
set_device_tck -name {MyDevice4} -tck {2.25}
```

set_device_type

Changes the family of a Microsemi device in the chain. The device must be a Microsemi device. The device parameter below is now optional.

```
set_device_type -name {name} -type {type}
```

Arguments

- **-name {name}**
  Identifies the name of the device you want to change.

- **-type {type}**
  Specifies the device family.

Supported Families

Any Microsemi device supported by FlashPro Express.

Exceptions

None

Example

The following example sets the device 'MyDevice2' to the type MPF300.

```
set_device_type -name {MyDevice2} -type {MPF300}
```

set_programming_action

This Tcl command is used to select the action for a device.

```
set_programming_action [-name {device_name}] -action {procedure_action}
```

Arguments

- **-name**
  Specify the device name. This argument is mandatory.

- **-action**
  Specify the programming action. This argument is mandatory.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Example

```
set_programming_action -name {MPF300(T_ES|TS_ES)} -action {DEVICE_INFO}
set_programming_action -name {M2S/M2GL090(T|TS|TV)} -action {ERASE}
```
**set_programming_file**

This Tcl command is used to set the programming file for a device. Either the file or the no_file flag must be specified. A programming file must be loaded. The device must be a Microsemi device.

```tcl
set_programming_file -name {device_name} -file {stapl_file_name_with_path}
```

**Arguments**

- `-name`
  Specify the device name. This argument is mandatory.
- `-file`
  Specify the file path. This argument is mandatory.

**Supported Families**

- SmartFusion2
- IGLOO2
- RTG4

**Example**

```tcl
set_programming_file -name {MPF300(T_ES|TS_ES)} -file {D:/export/CM1_PCIE_TOP_default_uic_i2_200_0_12.stp}
```

**See Also**

- construct_chain_automatically
- scan_chain_prg
- enable_device
- set_debug_programmer
- set_device_name
- set_programming_file
- run_selected_actions

**ssn_analyzer_set_pulse_width**

Tcl command specific to the Simultaneous Switching Noise (SSN) Analyzer; sets the pulse width for SSN calculation.

```tcl
ssn_analyzer_set_pulse_width -pulseWidth <value>
```

**Arguments**

- `-pulseWidth <value>`
Specifies the threshold value for pulse width. The signal bounce pulse width must reach this value before the signal bounce can be recognized for SSN Analysis. Valid values are 0ns or 1ns. A value of 0ns means any signal bounce with pulse width over 0ns is recognized for SSN analysis. A value of 1ns means only signal bounces with pulse width at or above 1ns are recognized for SSN analysis.

**Supported Families**
SmartFusion2 and IGLOO2

**Examples**

```
ssn_analyzer_set_pulse_width -pulseWidth 1.0
```

This Tcl command sets the pulse width threshold value to be 1.0 ns.

**See Also**
Simultaneous Switching Noise
**nvm_update_serialization_client**

This command updates an existing serialization client in the SmartFusion2 and IGLOO2 eNVM.

```
nvm_update_serialization_client -params {parm:value} [-params {parm:value}]
```

This command is usually put in a configuration "*.cfg" file and passed as an argument to the script parameter of the run_tool command.

```
run_tool -name (UPDATE_ENVM) -script "update.cfg"
```

**Parameter and Parameter Values**

The following table lists the parameter name and values for this command.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>client_name</td>
<td>String</td>
<td>valid string</td>
<td>Specifies the name of the eNVM serialization client to update</td>
</tr>
<tr>
<td>number_of_words</td>
<td>Integer</td>
<td>Decimal**</td>
<td>Specifies the number of words</td>
</tr>
<tr>
<td>use_for_simulation</td>
<td>Boolean</td>
<td>0</td>
<td>1</td>
</tr>
<tr>
<td>base_address</td>
<td>Integer</td>
<td>HEX numeral**</td>
<td>Specifies the client base address</td>
</tr>

</tbody>
</table>

** eNVM address range and available number of words are device dependent. See the eNVM Configuration User Guide for details.
** number_of_words available to users = Number of user pages * BYTES_PER_PAGE *8 / word_size

**Supported Families**
SmartFusion2, IGLOO2

**Example**
```
nvm_update_serialization_client \
-client_name {d1} \ 
-maximum_devices_to_program {6} 
-maximum_value {12}
```

**See Also**
"run_tool" on page 57

**nvm_update_storage_client**

This command updates an existing data storage client in the SmartFusion2 and IGLOO2 eNVM.
```
nvm_update_storage_client -params {parm:value} [-params {parm:value}]
```

This command is usually put in a configuration "*.cfg" file and passed as an argument to the script parameter of the run_tool command.
```
run_tool -name {UPDATE_ENVM} -script "update.cfg"
```

**Parameter and Parameter Values**
The following table lists the parameter name and values for this command.

<table>

** number_of_words available to users = Number of user pages * BYTES_PER_PAGE *8 / word_size

**

### Supported Families
- SmartFusion2, IGLOO2

### Example
```
nvm_update_storage_client \
  -client_name {c1} \ 
  -word_size 32 \ 
  -number_of_words 512
```
select_programmer

This Tcl command enables the specified programmer and disables all other connected programmers. This command is useful when multiple programmers are connected.

```
select_programmer -programmer_id {programmer_id} -host_name {host_name} -host_port {host_port}
```

Arguments

- `programmer_id <programmer_id>`
  The programmer to be enabled. See Select Programmer.
- `host_name <host_name>`
  The host name or IP address. This argument is required for a remote programmer and optional for a local programmer. For local programmer, if specified it must be “localhost”.
- `host_port <host_port>`
  This argument is required for a remote programmer and optional for a local programmer. If omitted, the default port is used (currently, the default is 80).
  For a local host, both “localhost” and its port should be specified or omitted.

Note: The def variable “LOCAL_PROGRAM_DEBUG_SERVER_PORT” is used to set a different default local host port.

Supported Families

- SmartFusion2
- IGLOO2
- RTG4

Examples

```
select_programmer -programmer_id {00557}
select_programmer -programmer_id {00557} -host_name {localhost} -host_port {80}
```

See Also

Select Programmer

set_programming_interface

This Tcl command sets the programming interface.

```
set_programming_interface -interface {JTAG | SPI_SLAVE}
```

Arguments

- `set_programming_interface -interface {JTAG | SPI_SLAVE}`
  Specify the programming interface as JTAG or SPI_SLAVE. The default is JTAG.

Supported Families

- SmartFusion2
ssn_analyzer_noise_report

Tcl command specific to the Simultaneous Switching Noise (SSN) Analyzer; instructs the SSN Analyzer to
generate a noise report of all the used I/Os in the design.

```
ssn_analyzer_noise_report -style {file format} -filename {full_path_to_filename}
```

**Arguments**

- `-style file_format`
  
  Specifies the file format for the report. Valid values are “Text”, “CSV”, and “XML”

- `-filename full_path_to_filename`
  
  Specifies the `full_path_to_filename` for the report.

**Supported Families**

SmartFusion2, IGLOO2

**Example**

The following example generates a noise report in Text format and saves it in
D:\2Work\SF2_SSN\MixedIOStd\myreport:

```
ssn_analyzer_noise_report -style Text -filename (D:\2Work\SF2_SSN\MixedIOStd\myreport)
```

ssn_analyzer_rerun_analysis

Tcl command specific to the Simultaneous Switching Noise (SSN) Analyzer; instructs the SSN Analyzer to run the
SSN analysis and compute the noise margin numbers.

```
ssn_analyzer_rerun_analysis
```

**Arguments**

This command takes no arguments.

**Supported Families**

SmartFusion2, IGLOO2

**Example**

The following example reruns the SSN Analyzer and computes the Noise Margin number:

```
ssn_analyzer_rerun_analysis
```

ssn_analyzer_set_dontcare

Tcl command specific to the Simultaneous Switching Noise (SSN) Analyzer; sets specific I/Os to the dont_care
state or resets dont_care I/Os to non-dont_care. A dont_care I/O is considered as an Aggressor only and not as a
Victim.
ssn_analyzer_set_dontcare -io "ioName" -iobank "ioBankName" -value "integer value"

**Arguments**

- **-io “ioName”**
  Specifies the I/O to be dont_care (the dont_care I/O will not be considered as a Victim, whereas it will be considered as an Aggressor for the SSN analysis) or resets dont_care I/Os to non-dont_care.

- **-iobank “ioBankName”**
  Specifies the I/O bank name the specific I/O belongs to.

- **-value “0|1”**
  Specifies an integer of “0” or “1” where
  “1” is used to set an I/O to be dont_care
  “0” is used to reset an I/O to be non-dont_care

**Supported Families**

SmartFusion2, IGLOO2

**Examples**

The following example sets the I/O named “DATA2” in I/O bank “Bank2” to dont_care:
```
ssn_analyzer_set_dontcare -io "DATA2" -ioBank "Bank2" -value "1"
```

The following example sets the dont_care I/O named “DATA1” in I/O bank “Bank3” to non-dont_care:
```
ssn_analyzer_set_dontcare -io "DATA1" -ioBank "Bank3" -value "0"
```

ssn_analyzer_set_pulse_width

Tcl command specific to the Simultaneous Switching Noise (SSN) Analyzer; sets the pulse width for SSN calculation.

ssn_analyzer_set_pulse_width -pulseWidth <value>

**Arguments**

- **-pulseWidth <value>**
  Specifies the threshold value for pulse width. The signal bounce pulse width must reach this value before the signal bounce can be recognized for SSN Analysis. Valid values are 0ns or 1ns. A value of 0ns means any signal bounce with pulse width over 0ns is recognized for SSN analysis. A value of 1ns means only signal bounces with pulse width at or above 1ns are recognized for SSN analysis.

**Supported Families**

SmartFusion2 and IGLOO2

**Examples**

```
ssn_analyzer_set_pulse_width -pulseWidth 1.0
```

This Tcl command sets the pulse width threshold value to be 1.0 ns.

**See Also**

Simultaneous Switching Noise
ssn_analyzer_set_static

Tcl command specific to the Simultaneous Switching Noise (SSN) Analyzer; sets specific I/Os to the static state or resets static I/Os to be non-static.

When the –value is “1”, it sets a specific I/O as static to the SSN Analyzer. A static I/O is considered neither as a victim nor as an aggressor. When the –value is “0”, this command sets a static I/O to be non-static.

```
ssn_analyzer_set_static -io "IoName" -iobank "IoBankName" -value "integer value"
```

Arguments

- `io “IoName”`
  Specifies the I/O name to be marked as static (neither to be considered as a Victim nor as an Aggressor for the SSN analysis) or a static I/O to be non-static.
- `iobank “IoBankName”`
  Specifies the I/O bank name the specific I/O belongs to.
- `value “0|1”`
  Specifies an integer value of either “0” or “1” where
  “1” is used to set a particular I/O to be static
  “0” is used to reset a static I/O to be non-static

Supported Families

SmartFusion2, IGLOO2

Examples

The following example sets the I/O named “DATA1” in I/O bank “Bank3” to static:

```
ssn_analyzer_set_static -io “DATA1” -iobank “Bank3” -value “1”
```

The following example sets the static I/O named “DATA2” in I/O bank “Bank1” to be non-static:

```
ssn_analyzer_set_static -io “DATA2” -iobank “Bank1” -value “0”
```

ssn_analyzer_summary_report

Tcl command specific to the Simultaneous Switching Noise (SSN) Analyzer; instructs the SSN Analyzer to generate a SSN Analyzer summary report of all the used I/Os in the design.

```
ssn_analyzer_summary_report -style "file format" -file "filename"
```

Arguments

- `style file format`
  Specifies the file format for the report. Valid values are “text”, “csv”, and “xml”.
- `file filename`
  Specifies the filename for the report.

Supported Families

SmartFusion2, IGLOO2

Example

The following example generates a summary report in XML format and saves it in the summary_report.xml file in the current directory:

```
ssn_analyzer_summary_report -style "xml" -filename ".summary_report"
```
update_storage_client

This command updates an existing uPROM storage client for the RTG4 uPROM.

\[ \text{nvm_update_storage_client} \ - \text{params \ {parm:value} \ [-params \ {parm:value}]} \]

This command is usually put in a configuration "*.cfg" file and passed as an argument to the script parameter of the run_tool command.

\[ \text{run_tool} \ - \text{name \ {UPDATE_ENVM}} \ - \text{script \ "update.cfg"} \]

Parameter and Parameter Values

The following table lists the parameter name and values for this command.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>client_name</td>
<td>String</td>
<td>valid string</td>
<td>Specifies the name of the uPROM data storage client to update</td>

<td>String</td>
<td>{MEMORY_FILE</td>
<td>STATIC_FILL</td>
</tr>
</tbody>
</table>

** number_of_words available to users = Number of user pages * BYTES_PER_PAGE * 8 / word_size

Supported Families

RTG4

Example

update_storage_client \ 
-client_name \{inc_dat\} \ 
-number_of_words \{10400\} \ 
-use_for_simulation \{0\} \ 
-content_type \{MEMORY_FILE\} \ 
-memory_file_format \{Microsemi-Binary\} \ 
-memory_file_format \{Microsemi-Binary\} \ 

-memory_file "E:/no-IDE/rtg4_uprom_example/uprom1.mem" \
-base_address {0}
